EZ-BLE™ Creator XR Module

General Description

The CYBLE-2X20XX-X1 is a Bluetooth® Low Energy (BLE) wireless module solution. The CYBLE-2X20XX-X1 is a turnkey solution and includes onboard crystal oscillators, passive components, and the Cypress PSoC 4 BLE. Refer to the PSoC 4 BLE datasheet for additional details on the capabilities of the PSoC 4 BLE device used on this module.

The CYBLE-2X20XX-X1 supports a number of peripheral functions (ADC, timers, counters, PWM) and serial communication protocols (I^2C, UART, SPI) through its programmable architecture. The CYBLE-2X20XX-X1 includes a royalty-free BLE stack compatible with Bluetooth 4.2 and provides up to 19 GPIOs in a 15.0 × 23.0 × 2.0 mm package.

The CYBLE-2X20XX-X1 is offered in two certified versions (CYBLE-212006-01 and CYBLE-202007-01), as well as an uncertified version (CYBLE-202013-11). The CYBLE-212006-01 includes an integrated trace antenna. The CYBLE-202007-01 supports an external antenna via a u-FL connector. The CYBLE-202013-11 supports an external antenna through a RF solder pad output. The CYBLE-202013-11 does not include a RF shield and is not regulatory certified.

Module Description

- Module size: 15.00 mm × 23.00 mm × 2.00 mm
- Extended Range:
  - Up to 400 meters bi-directional communication[1,2]
  - Up to 450 meters in beacon only mode[1]
- Bluetooth 4.2 qualified single-mode module
  - QDID: 88957
  - Declaration ID: D032786
- Footprint compatible options for integrated antenna or antenna-less design options
- Certified to FCC, ISED, MIC, KC, and CE regulations (CYBLE-212006-01 and CYBLE-202007-01 only)
- Castelated solder pad connections for ease-of-use
- 256-KB flash memory, 32-KB SRAM memory
- Up to 19 GPIOs
- Industrial temperature range: –40 °C to +85 °C
- 32-bit processor (0.9 DMIPS/MHz) operating up to 48 MHz
- Watchdog timer with dedicated internal low-speed oscillator

Power Consumption

- Maximum TX output power: +7.5 dbm
- RX Receive Sensitivity: –93 dbm
- Received signal strength indicator (RSSI) with 1-dB resolution
- TX current consumption
  - BLE silicon: 15.6 mA (radio only, 0 dbm)
  - RFX2401C: 27 mA (PA/LNA only, +7.5 dBm)
- RX current consumption
  - BLE silicon: 16.4 mA (radio only, 0 dbm)
  - RFX2401C: 8.0 mA (PA/LNA only)
- Cypress CYBL1XX7X silicon low power mode support
  - Deep Sleep: 1.3 µA with watch crystal oscillator (WCO) on
  - Hibernate: 150 nA with SRAM retention
  - Stop: 60 nA with XRES wakeup

Functional Capabilities

- Up to 18 capacitive sensors for buttons or sliders
- 12-bit, 1-Msps SAR ADC with internal reference, sample-and-hold (S/H), and channel sequencer
- Two serial communication blocks (SCBs) supporting I^2C (master/slave), SPI (master/slave), or UART
- Four dedicated 16-bit timer, counter, or PWM blocks (TCPWMs)
- LCD drive supported on all GPIOs (common or segment)
- Programmable low voltage detect (LVD) from 1.8 V to 3.6 V
- I^2S master interface
- BLE protocol stack supporting generic access profile (GAP) Central, Peripheral, Observer, or Broadcaster roles
- Switches between Central and Peripheral roles on-the-go
- Standard BLE profiles and services for interoperability
- Custom profile and service for specific use cases

Benefits

CYBLE-2X20XX-X1 is provided as a turnkey solution, including all necessary hardware required to use BLE communication standards.

- Proven hardware design ready to use
- Cost optimized for applications without space constraint
- Reprogrammable architecture
- Fully certified module eliminates the time needed for design, development and certification
- Bluetooth SIG qualified with QDID and Declaration ID
- Flexible communication protocol support
- PSoC Creator™ provides an easy-to-use integrated design environment (IDE) to configure, develop, program, and test a BLE application

Notes
1. Connection range tested module-to-module in full line-of-sight environment, free of obstacles or interference sources with output power of +7.5 dBm.
2. Specified as EZ-BLE XR module to module range. Mobile phone connection range will decrease based on the PA/LNA performance of the mobile phone used.

Two Easy-To-Use Design Environments to Get You Started Quickly

PSoC® Creator™ Integrated Design Environment (IDE)

PSoC Creator is an Integrated Design Environment (IDE) that enables concurrent hardware and firmware editing, compiling and debugging of PSoC 3, PSoC 4, PSoC 5LP, PSoC 4 BLE, and EZ-BLE module systems with no code size limitations. PSoC peripherals are designed using schematic capture and simple graphical user interface (GUI) with over 120 pre-verified, production-ready PSoC Components™.

PSoC Components are analog and digital “virtual chips,” represented by an icon that users can drag-and-drop into a design and configure to suit a broad array of application requirements.

Bluetooth Low Energy Component

The Bluetooth Low Energy Component inside PSoC Creator provides a comprehensive GUI-based configuration window that lets you quickly design BLE applications. The Component incorporates a Bluetooth Core Specification v4.2 compliant BLE protocol stack and provides API functions to enable user applications to interface with the underlying Bluetooth Low Energy Sub-System (BLESS) hardware via the stack.

EZ-Serial™ BLE Firmware Platform

The EZ-Serial Firmware Platform provides a simple way to access the most common hardware and communication features needed in BLE applications. EZ-Serial implements an intuitive API protocol over the UART interface and exposes various status and control signals through the module’s GPIOs, making it easy to add BLE functionality quickly to existing designs.

Use a simple serial terminal and evaluation kit to begin development without requiring an IDE. Refer to the EZ-Serial webpage for User Manuals and instructions for getting started as well as detailed reference materials.

EZ-BLE modules are pre-flashed with the EZ-Serial Firmware Platform. If you do not have EZ-Serial pre-loaded on your module, you can download each EZ-BLE module’s firmware images on the EZ-Serial webpage.

Overview

Module Description

The CYBLE-2X20XX-X1 module is a complete module designed to be soldered to the applications main board.

Module Dimensions and Drawing

Cypress reserves the right to select components (including the appropriate BLE device) from various vendors to achieve the BLE module functionality. Such selections will still guarantee that all height restrictions of the component area are maintained. Designs should be held within the physical dimensions shown in the mechanical drawings in Figure 1. All dimensions are in millimeters (mm).

Note

3. No metal or traces should be located beneath or above the antenna area. Only bare PCB material should be located beneath the antenna area. For more information on recommended host PCB layout, see Figure 3, Figure 4, Figure 5 and Figure 6, and Table 3.

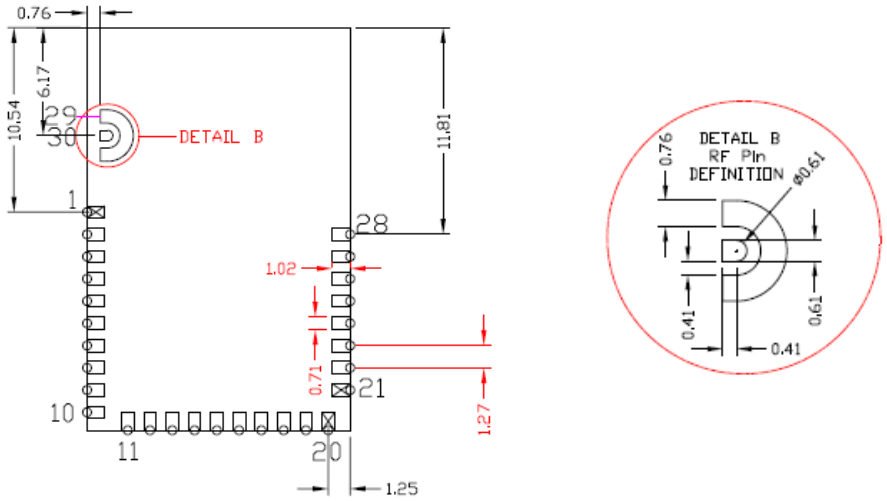
Pad Connection Interface

As shown in the bottom view of Figure 1 on page 5, the CYBLE-2X20XX-X1 connects to the host board via solder pads on the backside of the module. Table 2 and Figure 2 detail the solder pad length, width, and pitch dimensions of the CYBLE-2X20XX-X1 module.

Table 2. Solder Pad Connection Description

Name	Connections	Connection Type	Pad Length Dimension	Pad Width Dimension	Pad Pitch
SP	30	Solder Pads	1.02 mm	0.71 mm	1.27 mm

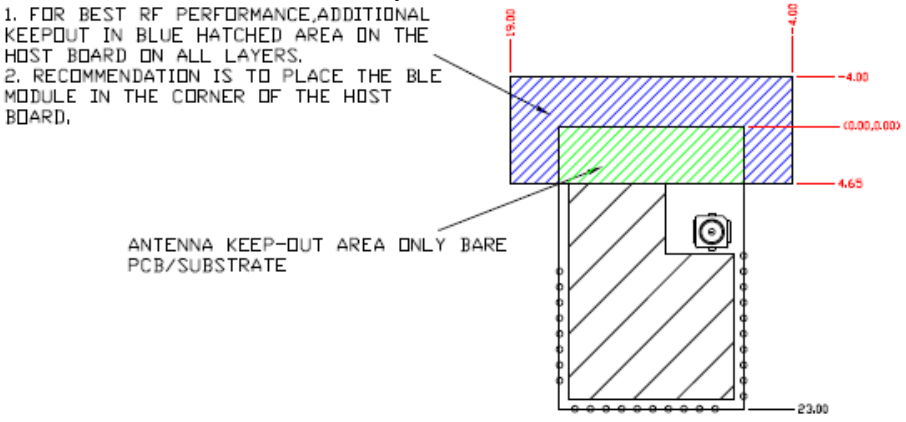
Figure 2. Solder Pad Dimensions (Seen from Bottom)



To maximize RF performance, the host layout should follow these recommendations:

1. The ideal placement of the Cypress BLE module is in a corner of the host board with the trace antenna located at the far corner. This placement minimizes the additional recommended keep out area stated in item 2. Please refer to AN96841 for module placement best practices.
2. To maximize RF performance, the area immediately around the Cypress BLE module trace antenna should contain an additional keep out area, where no grounding or signal trace are contained. The keep out area applies to all layers of the host board. The recommended dimensions of the host PCB keep out area are shown in Figure 3 (dimensions are in mm).

Figure 3. Recommended Host PCB Keep Out Area Around the CYBLE-2X20XX-X1 Antenna



Host PCB Keep Out Area Around Trace Antenna

Recommended Host PCB Layout

Figure 4, Figure 5, Figure 6, and Table 3 provide details that can be used for the recommended host PCB layout pattern for the CYBLE-212006-01. Dimensions are in millimeters unless otherwise noted. Pad length of 1.27 mm (0.635 mm from center of the pad on either side) shown in Figure 6 is the minimum recommended host pad length. The host PCB layout pattern can be completed using either Figure 4, Figure 5, or Figure 6. It is not necessary to use all figures to complete the host PCB layout pattern.

Notes

4. TCPWM: Timer, Counter, and Pulse Width Modulator. If supported, the pad can be configured to any of these peripheral functions.
5. TCPWM connections on ports 0, 1, 2, and 3 can be routed through the Digital Signal Interconnect (DSI) to any of the TCPWM blocks and can be either positive or negative polarity. TCPWM connections on port 4 are direct and can only be used with the specified TCPWM block and polarity specified above.
6. When using the capacitive sensing functionality, Pad 3 (P4.0) must be connected to a C_{MOD} capacitor (located off of Cypress BLE Module). The value of this capacitor is 2.2 nF and should be placed as close to the module as possible.
7. The main board needs to connect all GND connections (Pad 24/25/26/27) on the module to the common ground of the system.
8. If the I²S feature is used in the design, the I²S pins shall be dynamically routed to the appropriate available GPIO by PSoC Creator.

Power Supply Connections and Recommended External Components

Power Connections

The CYBLE-2X20XX-X1 contains two power supply connections, VDD and VDDR. The VDD connection supplies power for both digital and analog device operation. The VDDR connection supplies power for the device radio.

VDD accepts a supply range of 1.71 V to 3.6 V. VDDR accepts a supply range of 2.0V to 3.6V. These specifications can be found in Table 12. The maximum power supply ripple for both power connections on the module is 100 mV, as shown in Table 10.

The power supply ramp rate of VDD must be equal to or greater than that of VDDR.

Connection Options

Two connection options are available for any application:

1. Single supply: Connect VDD and VDDR to the same supply.
2. Independent supply: Power VDD and VDDR separately.

External Component Recommendation

In either connection scenario, it is recommended to place an external ferrite bead between the supply and the module connection. The ferrite bead should be positioned as close as possible to the module pin connection.

Figure 7 details the recommended host schematic options for a single supply scenario. The use of one or two ferrite beads will depend on the specific application and configuration of the CYBLE-2X20XX-X1.

Figure 8 details the recommended host schematic for an independent supply scenario.

The recommended ferrite bead value is 330 Ω, 100 MHz. (Murata BLM21PG331SN1D).

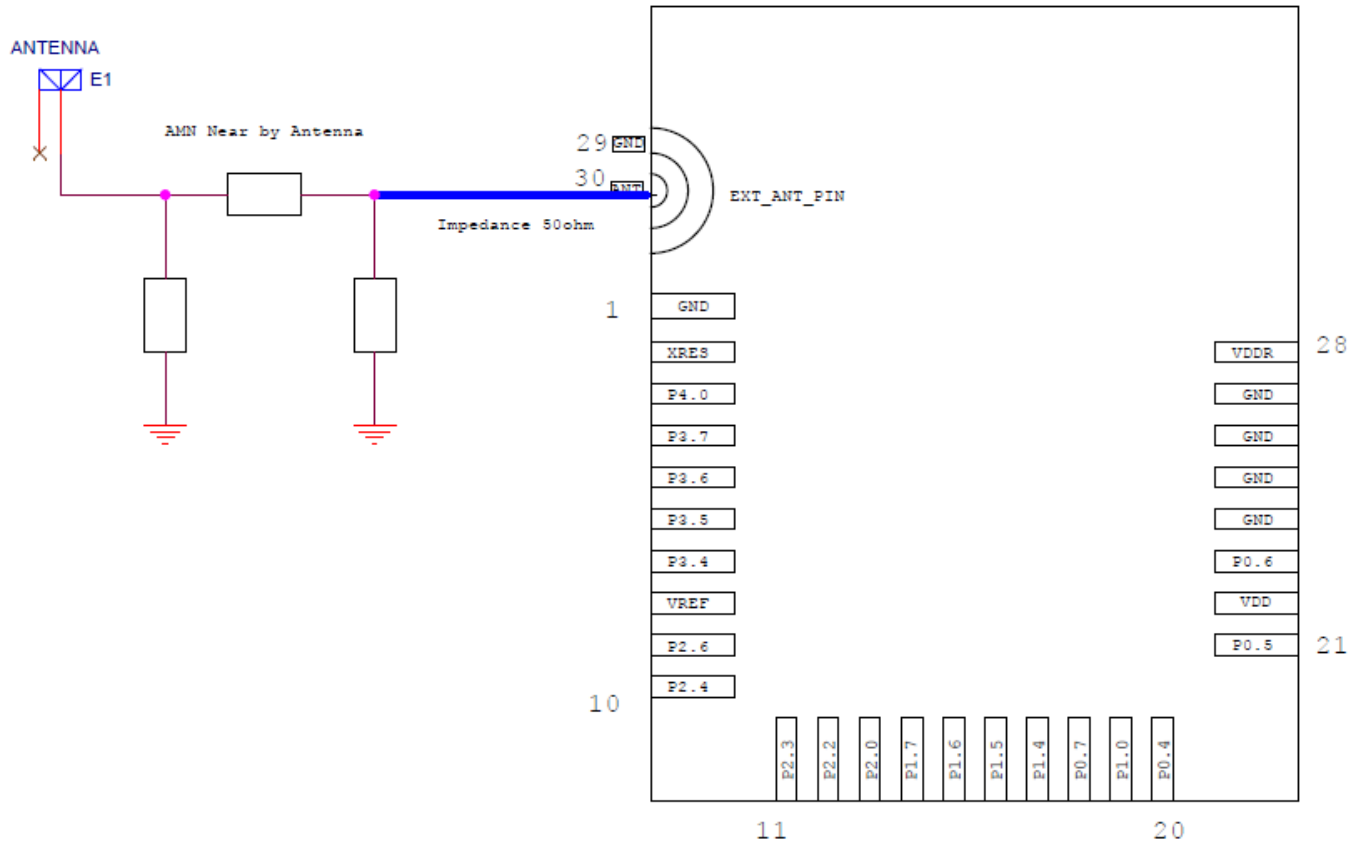
Antenna Matching Network Requirements for CYBLE-202013-11

The CYBLE-202013-11 module requires ANT and GND connections to an external antenna via the RF pad connections on the module (Pads 29 and 30). In order to optimize RF performance, an Antenna Matching Network (AMN) is required to be placed between the ANT connection (Pad 29) and the antenna used in the final design. Figure 9 details the recommended Pi topology circuit footprint to use for the Antenna Matching Network.

Figure 9. Recommended Antenna Matching Network for CYBLE-202013-11 Module



Module Pad Assignments Seen from Bottom View

Denotes a component footprint representing either a capacitor, inductor, or 0 Ohm resistor.

The design guidelines that should be followed when completing the Antenna Matching Network are as follows:

- The AMN should be placed close to the antenna on the main board.
- Routing to the AMN from the ANT pad on the module must be controlled to an impedance of 50Ω.
- The final AMN circuit may contain only a single component, or all three components shown above. The final number and type of components will be determined based on the actual design of the system, and the final values for each component can be determined through tuning the AMN. For details on how to properly tune an AMN, please refer to Application Note AN91445.

The CYBLE-2X20XX-X1 schematic is shown in Figure 10.

Qualified Antenna for CYBLE-202007-01 and CYBLE-202013-11

The CYBLE-202007-01 module has been designed to work with a standard 2.2 dBi dipole antenna. Any antenna of equivalent or less gain can be used without additional application and testing for FCC regulations. Table 7 details the approved antennas for the CYBLE-202007-01 module for BLE operation. These antennas may also be used for the CYBLE-202013-11 module, however all FCC and other regulatory testing will be required.

Table 7. Qualified Antenna

Manufacturer	Part Number	Gain
Antenova	B4844-01	2.2 dBi
RFlink	RF21C01228A	2.0 dBi
Pulse	W1030	2.0 dBi

Power Amplifier (PA) and Low Noise Amplifier (LNA)

Table 8 details the PA/LNA that is used on the CYBLE-2X20XX-X1 module. For more information, see Table 11.

Table 8. Power Amplifier/Low Noise Amplifier Details

Item	Description
PA/LNA Manufacturer	Skyworks Inc.
PA/LNA Part Number	RFX2401C
Power Supply Range	2.0V to 3.6V

Table 9 details the power consumption of the integrated PA/LNA used on the CYBLE-2X20XX-X1 module. Table 9 only details the current consumption of the RFX2401C PA/LNA. VDD= 3.3 V, TA = +25°C, measured on the RFX2401C evaluation board, unless otherwise noted.

Tx Quiescent Current	No RF applied		17		mA
Rx Quiescent Current	No RF applied		8		mA

Enabling Extended Range Feature

The CYBLE-2X20XX-X1 modules come with an integrated Power Amplifier/Low Noise Amplifier to allow for extended communication range of up to 400 meters full line-of-sight. This section describes the firmware steps required to enable extended range operation of the CYBLE-2X20XX-X1 modules. The CYBLE-2X20XX-X1 is designed to provide extended range functionality, and the PA/LNA of the module cannot be operated in bypass mode. The minimum output power configuration available for the CYBLE-2X20XX-X1 is +1 dBm, which is configurable via silicon internal output power settings.

The Skyworks RFX2401C PA/LNA is controlled by PSoC 4 BLE and uses two GPIOs:

1. One GPIO to control the PA enable (P3[2]). The PA enable GPIO is controlled directly by the BLE Link Layer.
2. One GPIO to control the LNA enable (P3[3]). The LNA enable GPIO is controlled directly by the BLE Link Layer.

Ensure that the PSoC 4 BLE silicon device “Adv/Scan TX Power Level (dBm)” and “Connection TX Power Level (dBm)” in the BLE Component are both set to -12 dBm[9]

To enable the extended range functionality, follow the steps outlined below:

1. Open your project’s *main.c* file and write the below code to define the register at the top of the code.

```
/* define the test register to switch the PA/LNA hardware control pins */
#define     CYREG_SRSS_TST_DDFT_CTRL    0x40030008
```

2. Locate/add the event “CYBLE_EVT_STACK_ON" in the application code and insert the below two lines of code to enable the Skyworks RFX2401C.

```
/* Mandatory events to be handled by BLE application code */
case CYBLE_EVT_STACK_ON:
  /* Configure the Link Layer to automatically switch PA control pin P3[2] and LNA control pin P3[3] */
  CY_SET_XTND_REG32((void CYFAR *)(CYREG_BLE_BLESS_RF_CONFIG), 0x0331);
  CY_SET_XTND_REG32((void CYFAR *)(CYREG_SRSS_TST_DDFT_CTRL), 0x80000302);
```

Low Power Operation

The CYBLE-2X20XX-X1 module is already optimized for low power operation when in high output power, high gain mode. The Cypress BLE Link Layer will automatically enable TX high power operation, as well as RX high gain operation. When the radio TX or RX operation is not in use (i.e. sleep), the PA/LNA will be set to shutdown mode by the BLE Link Layer. This will occur during sleep modes of the Cypress PSoC 4 BLE silicon device.

To learn more about optimize the Cypress PSoC 4 BLE power consumption, refer to AN92584: Designing for Low Power and Estimating Battery Life for BLE Applications.

Note

9. The CYBLE-212006-01 module is certified for FCC, ISED, CE, MIC and KC regulations at an output power of +7.5 dBm. To achieve this output power, RF_{O2} (PSoC 4 BLE silicon PA level) must be set to the -12 dBm setting in firmware. Settings higher than this will result in higher output power than specified in the CYBLE-212006-01 certifications.

Electrical Specification

Table 10 details the absolute maximum electrical characteristics for the Cypress BLE module.

Note
11. A maximum of six single-ended ADC Channels can be accomplished only if the AMUX Buses are not being used for other funcitonality (e.g. CapSense). If the AMUX Buses are being used for other functions, then the maximum number of single-ended ADC channels is four. Similarly, if the AMUX Buses are being used for other functionality, then the maximum number of differential ADC channels is two.

Environmental Specifications

Environmental Compliance

CYBLE-212006-01 and CYBLE-202013-11 are built in compliance with the Restriction of Hazardous Substances (RoHS) and Halogen Free (HF) directives. CYBLE-212006-01 and CYBLE-202013-11 and components used to produce this module are RoHS and HF compliant.

CYBLE-202007-01 is built in compliance with the Restriction of Hazardous Substances (RoHS) directives. CYBLE-202007-01 and components used to produce this module are RoHS compliant.

RF Certification

The CYBLE-212006-01 and CYBLE-202007-01 modules will be certified under the following RF certification standards at production release.

- FCC: WAP2006
- CE
- IC: 7922A-2006
- MIC: 203-JN0599
- KC: MSIP-CRM-Cyp-2006

Safety Certification

The CYBLE-212006-01 and CYBLE-202007-01 modules comply with the following regulations:

- Underwriters Laboratories, Inc. (UL) - Filing E331901
- CSA
- TUV

Environmental Conditions

Table 55 describes the operating and storage conditions for the Cypress BLE module.

Table 55. Environmental Conditions for CYBLE-2X20XX-X1

Description	Minimum Specification	Maximum Specification
Operating temperature	–40 °C	85 °C
Operating humidity (relative, non-condensation)	5%	85%
Thermal ramp rate	–	3 °C/minute
Storage temperature	–40 °C	85 °C
Storage temperature and humidity	–	85 ° C at 85%
ESD: Module integrated into system Components[13]	–	15 kV Air 2.2 kV Contact

ESD and EMI Protection

Exposed components require special attention to ESD and electromagnetic interference (EMI).

A grounded conductive layer inside the device enclosure is suggested for EMI and ESD performance. Any openings in the enclosure near the module should be surrounded by a grounded conductive layer to provide ESD protection and a low-impedance path to ground.

Device Handling: Proper ESD protocol must be followed in manufacturing to ensure component reliability.

Note
13. This does not apply to the RF pins (ANT, XTALI, and XTALO). RF pins (ANT, XTALI, and XTALO) are tested for 500-V HBM.

Regulatory Information

FCC

FCC NOTICE:

The devices CYBLE-212006-01 and CYBLE-202007-01 comply with Part 15 of the FCC Rules. The device meet the requirements for modular transmitter approval as detailed in FCC public Notice DA00-1407.transmitter Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

CAUTION:

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Cypress Semiconductor may void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, ê may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help

LABELING REQUIREMENTS:

The Original Equipment Manufacturer (OEM) must ensure that FCC labelling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Cypress Semiconductor FCC identifier for this product as well as the FCC Notice above. The FCC identifier is FCC ID: WAP2006.

In any case the end product must be labeled exterior with “Contains FCC ID: WAP2006”.

ANTENNA WARNING:

This device is tested with a standard SMA connector and with antennas meeting the characteristics shown in Table 7 on page 14. When integrated in the OEMs product, these fixed antennas require installation preventing end-users from replacing them with non-approved antennas. Any antenna not in the following table must be tested to comply with FCC Section 15.203 for unique antenna connectors and Section 15.247 for emissions.

RF EXPOSURE:

To comply with FCC RF Exposure requirements, the Original Equipment Manufacturer (OEM) must ensure to install the approved antenna in the previous.

The preceding statement must be included as a CAUTION statement in manuals, for products operating with the approved antennas in Table 6 and Table 7 on page 14, to alert users on FCC RF Exposure compliance. Any notification to the end user of installation or removal instructions about the integrated radio module is not allowed.

The radiated output power of CYBLE-212006-01 and CYBLE-202007-01 with the specified antennas are far below the FCC radio frequency exposure limits. Nevertheless, use CYBLE-212006-01 and CYBLE-202007-01 in such a manner that minimizes the potential for human contact during normal operation.

End users may not be provided with the module installation instructions. OEM integrators and end users must be provided with transmitter operating conditions for satisfying RF exposure compliance.

ISED

Innovation, Science and Economic Development (ISED) Canada Certification

CYBLE-212006-01 and CYBLE-202007-01 are licensed to meet the regulatory requirements of Innovation, Science and Economic Development (ISED) Canada,

License: IC: 7922A-2006

Manufacturers of mobile, fixed or portable devices incorporating this module are advised to clarify any regulatory questions and ensure compliance for SAR and/or RF exposure limits. Users can obtain Canadian information on RF exposure and compliance from www.ic.gc.ca.

This device has been designed to operate with the antennas listed in Table 6 and Table 7 on page 14, having a maximum gain of 2.2 dBi. Antennas not included in this list or having a gain greater than 2.2 dBi are strictly prohibited for use with this device. The required antenna impedance is 50 ohms. The antenna used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

ISED NOTICE:

The devices CYBLE-212006-01 and CYBLE-202007-01, including the specified antennas comply with Canada RSS-GEN Rules. The device meets the requirements for modular transmitter approval as detailed in RSS-GEN. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

Les dispositifs CYBLE-212006-01 et CYBLE-202007-01, y compris les antennes spécifiées, sont conformes aux Règles RSS-GEN de Canada. L'appareil répond aux exigences d'approbation de l'émetteur modulaire tel que décrit dans RSS-GEN. L'opération est soumise aux deux conditions suivantes: (1) Cet appareil ne doit pas causer d'interférences nuisibles, et (2) Cet appareil doit accepter toute interférence reçue, y compris les interférences pouvant entraîner un fonctionnement indésirable.

ISED INTERFERENCE STATEMENT FOR CANADA

These modules comply with Innovation, Science and Economic Development (ISED) Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Ces modules sont conformes à la norme (s) RSS soumise (s) à la licence de l'innovation, de la science et du développement économique (ISED). Le fonctionnement est soumis aux deux conditions suivantes: (1) cet appareil ne doit pas provoquer d'interférence, et (2) cet appareil doit accepter toute interférence, y compris les interférences susceptibles de provoquer un fonctionnement indésirable de l'appareil.

ISED RADIATION EXPOSURE STATEMENT FOR CANADA

This equipment complies with ISED radiation exposure limits set forth for an uncontrolled environment.

Cet équipement est conforme aux limites d'exposition aux radiations ISED prévues pour un environnement incontrôlé.

LABELING REQUIREMENTS:

The Original Equipment Manufacturer (OEM) must ensure that ISED labelling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Cypress Semiconductor IC identifier for this product as well as the ISED Notice above. The IC identifier is 7922A-2006. In any case, the end product must be labeled in its exterior with "Contains IC: 7922A-2006".

European Declaration of Conformity

Hereby, Cypress Semiconductor declares that Bluetooth modules CYBLE-212006-01 and CYBLE-202007-01 comply with the essential requirements and other relevant provisions of Directive 2014. As a result of the conformity assessment procedure described in Annex III of the Directive 2014, the end-customer equipment should be labeled as follows:

All versions of the CYBLE-212006-01 and CYBLE-202007-01 in the specified reference design can be used in the following countries: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, The Netherlands, the United Kingdom, Switzerland, and Norway.

MIC Japan

CYBLE-212006-01 and CYBLE-202007-01 are certified as a module with type certification number 203-JN0599. End products that integrate CYBLE-212006-01 and CYBLE-202007-01 do not need additional MIC Japan certification for the end product.

End product can display the certification label of the embedded module.

Document Title: CYBLE-212006-01, CYBLE-202007-01, CYBLE-202013-11 EZ-BLE™ Creator XR Module Document Number: 002-15631				
Revision	**ECN**	**Orig. of Change**	**Submission Date**	**Description of Change**
**	5446955	DSO	10/07/2016	Preliminary datasheet for CYBLE-2X20XX-X1 modules.
*A	5536076	DSO	11/29/2016	Updated More Information: Added EZ-Serial™ BLE Firmware Platform section. Updated Overview: Added Bluetooth Declaration ID and QDID under "Bluetooth 4.2 qualified single-mode module" Updated Recommended Host PCB Layout: Updated Figure 4, Figure 5, and Figure 6 captions to specify that these as "Seen on Host PCB". Updated Power Supply Connections and Recommended External Components: Updated Figure 7 and Figure 8 to specify that these are "Seen from Bottom". Updated Digital and Analog Capabilities and Connections: Updated Table 4: Updated TCPWM column to add TCPWM capability on Port 2 pins. Added Footnote 5.
*B	5554670	DSO	12/15/2016	Updated More Information: Added hyperlinks for Evaluation Board listed under Development Kits Updated Enabling Extended Range Feature: Updated SAR ADC: Updated Table 21 to add Note 10 to specify under what conditions the maximum number of ADC channels can be achieved.
*C	5667227	DSO	03/21/2017	Changed status from "Preliminary" to "Final". Added Antenna Matching Network Requirements for CYBLE-202013-11 section. Updated Table 54 to update specifications for RX, TX, and module power consumption. Updated Figure 14 to add Center of Mass for CYBLE-212006-01.
*D	5705684	AESATMP7	04/21/2017	Updated Cypress Logo and Copyright.
*E	5782926	DSO	06/22/2017	Updated More Information. Updated Enabling Extended Range Feature to specifically state that there is no bypass mode of operation for this module. Updated Table 53, specifications RSXE1 and RSXE2 comment to latest CE specification - ETSI EN300 V2.1.1. Updated power supply upper voltage range for V_{DD} signal throughout document to 3.6 V due to PA/LNA digital interface power level requirement: Updated Power Supply Connections and Recommended External Components. Updated Figure 8. Updated Table 4, Table 10 through Table 14, Table 15, Table 17, Table 22, and Table 23. Updated ISED on page 32 to latest ISED documentation requirements. Updated European Declaration of Conformity on page 33 to latest European regulatory requirements. Updated Sales page.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
