

Installation Instructions for the HDLS Series Switches

ISSUE 2
PK 81116

⚠ WARNING

PERSONAL INJURY

DO NOT USE these products as safety or emergency stop devices or in any other application where failure of the product could result in personal injury.

Failure to comply with these instructions could result in death or serious injury.

MOUNTING

All Heavy Duty Limit Switches (HDLS) have exactly the same mounting dimensions. Mount by either of two methods: (a) use two #10 screws from the front, or (b) use two #10-32 UNF screws from the back. HDLS offers the advantage of front mount construction. The electrician will find a complete switch, with no parts missing and ample wiring space.

With plug-in construction, wiring and conduit connection is made to the base receptacle. This feature also reduces downtime, since plug-in unit can be removed without disconnecting wiring or conduit.

To mount either switch, merely tighten mounting screws, tighten plug-in unit or cover screws, and make sure conduit section is sealed. Use of sealant (teflon tape, pipe dope, etc.) is recommended to seal conduit connection.

Because of moisture condensation problems, it is not good practice to mount the switch upside down or at the low point of conduit runs.

Single-Pole – Plug-in Type

Double-Pole – Non Plug-in Type

Sealing	IP67/68
Enclosure Type	1, 3, 3R, 4, 4X, 6, 6P, 12, 13

Rated Operational Voltages (Ue) and Currents (Ie)	
Ue	Ie
120 Vac	6 A
600 Vac	1.2 A
125 Vdc	0.22 A
250 Vdc	0.11 A

WIRING

Use size #12AWG or smaller solid or stranded wire to connect to the pressure type connector terminals. Spades may be up to .312" wide, rings up to .312" dia. With spade or ring type connections, preinsulated connectors or heat-shrinkable tubing should be used to provide insulation between terminals. Circuit diagram is shown on the nameplate.

It will be easier to wire the double-pole units by connecting lead wires to the terminals nearest the conduit opening first. A grounding screw is located in the housing near the conduit opening.

Switch units with an indicator light in the cover are furnished with the lead wires from the light connected to the normally-open male terminals (#3 and #4) unless otherwise specified on the order. Wires can be unsoldered and reconnected to the normally-closed male terminals or they can be ordered connected to the normally-closed terminals by using a modification code (refer to Catalog 40). Always connect these wires to the same set of terminals used for the load. Across the normally open male terminals (#3 and #4) the light will be On (Fig. 1). Across the normally closed terminals (#1 and #2) the light will be Off.

ADJUSTING INSTRUCTIONS

Actuator head. For application flexibility, actuator head may be positioned in any of four directions. Loosen the four captive head screws, place head in the desired position, and then securely tighten the four screws.

Reversing the roller lever.

Except for the offset roller levers, the roller arm may be reversed to face the roller to the inside or outside of the arm.

Positioning Lever. Lever on rotary actuated units is adjustable through 360° around the shaft. Loosen the screw with a 9/64 inch hexagon key wrench, move lever to desired position and securely tighten the screw until "teller tab" can no longer be moved by hand. Then tighten the screw another 1/8 to 1/4 turn to assure lever is tight on the shaft. Hexagon key wrenches are provided in adjusting tool set LSZ4005 for this purpose.

Teller Tab

Adjustable Length Levers. A hexagon key wrench is required to adjust length of adjustable levers.

Top Roller Plunger. Position top roller plunger in desired roller plane by adjusting the head as explained under Actuator Head.

Side Roller Plunger. Grasp roller with pliers and rotate it to desired horizontal or vertical plane.

CHANGING DIRECTION OF ACTUATION

Side Rotary. LSM (center neutral) and LSN (maintained) listings operate in both directions and cannot be changed. Listings with the first three letters LSA, LSH, LSL, LSP, LSU, and LSR may be changed to operate clockwise, counterclockwise or both. NOTE: Instructions for adjusting switch operation are cast into the hinged cover (Fig. 2). To change, follow these steps:

1. Loosen the head screws and remove the head from the switch housing.
2. On the bottom of the head, insert a screwdriver in slot provided (Fig. 2) and lift open hinged cover.
3. Referring to Fig. 3, slide cam all the way back, so cam is free to rotate on the shaft.

4. Using a screwdriver or similar tool, rotate cam to desired actuating position (Fig. 4, 5, and 6.)
5. Slide cam all the way forward to its original position, and close hinged cover.
6. Replace operating head on switch housing and securely tighten head screws.

Figure 6

Cam Lobe
For CCW

Top Rotary. Follow these steps to change operating direction of LSB type switches:

1. Loosen head screws and remove head from the switch housing.
2. From bottom of head grasp end of pin plunger and remove pin. It may be necessary to rotate actuating shaft to expose end of pin plunger.
3. Refer to Fig. 8 and select correct pin plunger position for desired direction of actuation.
4. Insert the pin plunger in the position providing desired direction of actuation.
5. Replace the operating head on switch housing and securely tighten head screws.

REPLACEMENT PARTS

Should your specific switch catalog listing not appear in this parts list, contact nearest MICRO SWITCH Authorized distributor or MICRO SWITCH sales office.

For ease of making switch adjustments which may be necessary on various switch listings, order LSZ4005 (lever and switch adjusting tool set). This set consists of a special 3/32" open wrench and necessary hexagon key wrenches to adjust all types of levers.

Hex head screws. If you prefer to loosen and tighten lever with a pliers or screwdriver, order 15PA164-LS (packet of 50 hexhead screws with screwdriver slot) to replace screws furnished with the lever.

Replacement Levers. To order replacement levers, order the same part number that is metal stamped on either lever or lever hub. For other lever variations, refer to HDLS in Catalog 40.

PROPER APPLICATION OF LIMIT SWITCHES

To achieve greatest reliability and longest life possible, limit switches should be installed as outlined in NEMA ICS2-225.

WARRANTY/REMEDY

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Honeywell's standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgement or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items it finds defective. **The foregoing is buyer's sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.**

While we provide application assistance personally, through our literature and the Honeywell web site, it is up to the customer to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for its use.

GRAVITY RETURN HDLS

Listings beginning with LSS are gravity return devices. During installation and setup, note the following:

1. Operate and release points exchange locations when shaft is rotated 180° (Fig. 9).
2. Switch is near operate-release points when shaft slot is parallel to switch's long axis (Fig. 9).
3. The switch should be installed so gravity return of the actuator releases the switch.

SALES AND SERVICE

Honeywell serves its customers through a worldwide network of sales offices, representatives and distributors. For application assistance, current specifications, pricing or name of the nearest Authorized Distributor, contact your local sales office or:

Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
