### DESCRIPTION

The *ISSI* IS61LV256AL is a very high-speed, low power, 32,768-word by 8-bit static RAM. It is fabricated using *ISSI*'s high-performance CMOS technology. This highly reliable process coupled with innovative circuit design techniques, yields access times as fast as 8 ns maximum.

When  $\overline{CE}$  is HIGH (deselected), the device assumes a standby mode at which the power dissipation is reduced to 150  $\mu$ W (typical) with CMOS input levels.

Easy memory expansion is provided by using an active LOW Chip Enable ( $\overline{CE}$ ). The active LOW Write Enable ( $\overline{WE}$ ) controls both writing and reading of the memory.

The IS61LV256AL is available in the JEDEC standard 28-pin, 300-mil SOJ and the 450-mil TSOP (Type I) packages.
