

# ECL/PECL Dual Differential 2:1 Multiplexer

MAX9384

## General Description

The MAX9384 fully differential dual 2:1 multiplexer (mux) features extremely low propagation delay (560ps max) and output-to-output skew (40ps max). The device is ideal for clock and data multiplexing applications. The two 2:1 muxes are controlled individually or simultaneously through mux select inputs COM\_SEL, SEL0, and SEL1. The mux select inputs are compatible with ECL/PECL logic, and are referenced to on-chip outputs  $V_{BB0}$  and  $V_{BB1}$ , nominally  $V_{CC} - 1.33V$ .

The differential inputs  $D, \bar{D}$  can be configured to accept a single-ended signal when the unused complementary input is connected to the on-chip supply output  $V_{BB}$  as a reference voltage. All the differential inputs have bias and clamp circuits that force the outputs to a low default when the inputs are left open or at  $V_{EE}$ . The single-ended mux select inputs have pulldowns to  $V_{EE}$ , providing low default inputs when the select inputs are left open.

The device operates with a wide supply range ( $V_{CC} - V_{EE}$ ) of +3.0V to +5.5V for PECL or -3.0V to -5.5V for ECL, and is pin compatible with the MC100LVEL56 and MC100EL56. The MAX9384 is offered in a 20-pin wide SO package, and is specified for operation from -40°C to +85°C.

## Applications

High-Speed Telecom, Datacom Applications  
Central-Office Backplane Clock Distribution  
Access Multiplexers (DSLAM/DLC)

*Functional Diagram appears at end of data sheet.*

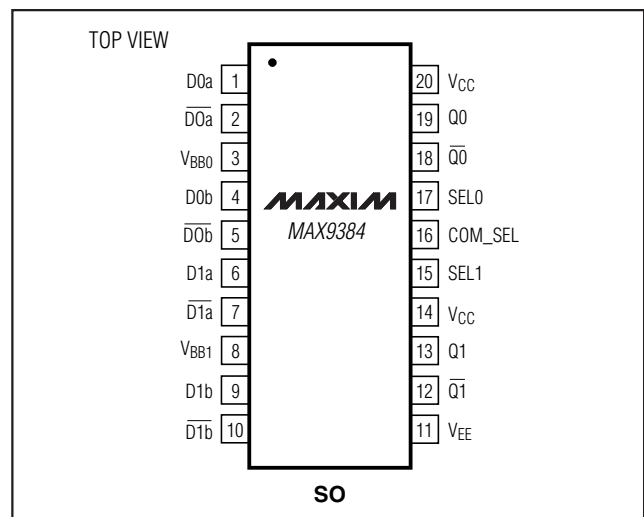

## Features

- ◆ 40psp-p Deterministic Jitter
- ◆ 440ps Differential Propagation Delay
- ◆ 12ps Output-to-Output Skew
- ◆ Individual and Common Select
- ◆ +3.0V to +5.5V Supplies for Differential LVPECL/PECL
- ◆ -3.0V to -5.5V Supplies for Differential LVECL/ECL
- ◆ Outputs Low for Inputs Open or at  $V_{EE}$
- ◆ >2kV ESD Protection (Human Body Model)
- ◆ Pin Compatible with MC100LVEL56 and MC100EL56

## Pin Description

PIN	NAME	FUNCTION
1	D0a	Noninverting Differential Input <b>a</b> for MUX 0. Internal 120kΩ pull-down to V <sub>EE</sub> .
2	$\overline{D0a}$	Inverting Differential Input <b>a</b> for MUX 0. Internal 120kΩ pull-down to V <sub>EE</sub> and 120kΩ pull-up to V <sub>CC</sub> .
3	V <sub>BB0</sub>	Reference Output Voltage. Connect to the inverting or noninverting clock input to provide a reference for single-ended operation. When used, bypass V <sub>BB0</sub> to V <sub>CC</sub> with a 0.01μF ceramic capacitor. Otherwise leave open. V <sub>BB0</sub> is internally connected to V <sub>BB1</sub> .
4	D0b	Noninverting Differential Input <b>b</b> for MUX 0. Internal 120kΩ pull-down to V <sub>EE</sub> .
5	$\overline{D0b}$	Inverting Differential Input <b>b</b> for MUX 0. Internal 120kΩ pull-down to V <sub>EE</sub> and 120kΩ pull-up to V <sub>CC</sub> .
6	D1a	Noninverting Differential Input <b>a</b> for MUX 1. Internal 120kΩ pull-down to V <sub>EE</sub> .
7	$\overline{D1a}$	Inverting Differential Input <b>a</b> for MUX 1. Internal 120kΩ pull-down to V <sub>EE</sub> and 120kΩ pull-up to V <sub>CC</sub> .
8	V <sub>BB1</sub>	Reference Output Voltage. Connect to the inverting or noninverting clock input to provide a reference for single-ended operation. When used, bypass V <sub>BB1</sub> to V <sub>CC</sub> with a 0.01μF ceramic capacitor. Otherwise leave open. V <sub>BB1</sub> is internally connected to V <sub>BB0</sub> .
9	D1b	Noninverting Differential Input <b>b</b> for MUX 1. Internal 120kΩ pull-down to V <sub>EE</sub> .
10	$\overline{D1b}$	Inverting Differential Input <b>b</b> for MUX 1. Internal 120kΩ pull-down to V <sub>EE</sub> and 120kΩ pull-up to V <sub>CC</sub> .
11	V <sub>EE</sub>	Negative Supply Voltage
12	$\overline{Q1}$	Inverting Output for MUX 1. Typically terminate with 50Ω resistor to V <sub>CC</sub> - 2V.
13	Q1	Noninverting Output for MUX 1. Typically terminate with 50Ω resistor to V <sub>CC</sub> - 2V.
14, 20	V <sub>CC</sub>	Positive Supply Voltage. Bypass each V <sub>CC</sub> to V <sub>EE</sub> with 0.1μF and 0.01μF ceramic capacitors. Place the capacitors as close to the device as possible with the smaller value capacitor closest to the device.
15	SEL1	Select Logic Input for MUX 1. Internal 210kΩ pull-down to V <sub>EE</sub> .
16	COM_SEL	Common Select Logic Input. Internal 210kΩ pull-down to V <sub>EE</sub> .
17	SEL0	Select Logic Input for MUX 0. Internal 210kΩ pull-down to V <sub>EE</sub> .
18	$\overline{Q0}$	Inverting Output for MUX 0. Typically terminate with 50Ω resistor to V <sub>CC</sub> - 2V.
19	Q0	Noninverting Output for MUX 0. Typically terminate with 50Ω resistor to V <sub>CC</sub> - 2V.

## Detailed Description

The MAX9384 dual differential 2:1 multiplexer features extremely low propagation delay (560ps max) and output-to-output skew (40ps max). These features make the device ideal for clock and data multiplexing applications.

The two differential muxes are controlled individually or simultaneously through select control inputs,  $SEL_0$ ,  $SEL_1$ , and  $COM\_SEL$  (see Table 1). The select control inputs are referenced to  $V_{BB}$  (nominally  $V_{CC} - 1.33V$ ) and are internally pulled down to  $V_{EE}$  through 210k $\Omega$  resistors. By default, the select inputs are low when left open.

The differential inputs  $D_-$ ,  $\overline{D}_-$  can be configured to accept a single-ended signal when the unused complementary input is connected to the on-chip reference voltage  $V_{BB}$ . The reference output voltage, pins  $V_{BB0}$  and  $V_{BB1}$ , provides the input reference voltage for single-ended operation for each mux. A single-ended input of at least  $V_{BB_-} \pm 95mV$  or a differential input of at least 95mV switches the outputs to the  $V_{OH}$  and  $V_{OL}$  levels

Table 1. Input Select Truth Table

CONTROL INPUT		DATA INPUT
COM_SEL	SEL_	$D_-$ , $\overline{D}_-$
L or open	L or open	b*
	H	a
H	X	a

\*Default input when  $COM\_SEL$  and  $SEL_-$  are left open.

specified in the *DC Electrical Characteristics*. The maximum magnitude of the differential input from  $D_-$  to  $\overline{D}_-$  is  $\pm 3.0V$ . Specifications for the high and low voltages of a differential input ( $V_{IHD}$  and  $V_{ILD}$ ) and the differential input voltage ( $V_{IHD} - V_{ILD}$ ) apply simultaneously.

The device operates over a wide supply range ( $V_{CC} - V_{EE}$ ) of +3.0V to +5.5V for PECL or -3.0V to -5.5V for ECL, and is pin compatible with the MC100LVEL56 and MC100EL56.

## Single-Ended Operation

A single-ended input can be driven to  $V_{CC}$  and  $V_{EE}$  or by a single-ended LVPECL/LVECL signal.  $D_-$ ,  $\overline{D}_-$  are differential inputs but can be configured to accept single-ended inputs. This is accomplished by connecting the on-chip reference voltage,  $V_{BB_-}$ , to an unused complementary input as a reference. For example, the differential  $D_0a$ ,  $\overline{D}_0a$  input is converted to a noninverting, single-ended input by connecting  $V_{BB0}$  to  $\overline{D}_0a$  and connecting the single-ended input to  $D_0a$ . Similarly, an inverting input is obtained by connecting  $V_{BB0}$  to  $D_0a$  and connecting the single-ended input to  $\overline{D}_0a$ .

When using the  $V_{BB_-}$  reference output, bypass it with a 0.01 $\mu F$  ceramic capacitor to  $V_{CC}$ . If not used, leave it open. The  $V_{BB_-}$  reference can source or sink 0.5mA, which is sufficient to drive two inputs.

# ECL/PECL Dual Differential 2:1 Multiplexer

## Applications Information

### Output Termination

Terminate the outputs through  $50\Omega$  to  $V_{CC} - 2V$  or use equivalent Thevenin terminations. Terminate each  $Q_{-}$  and  $\overline{Q}_{-}$  output with identical termination on each for minimal distortion. When a single-ended signal is taken from the differential output, terminate both  $Q_{-}$  and  $\overline{Q}_{-}$ . Ensure that output currents do not exceed the current limits as specified in the *Absolute Maximum Ratings* table. Under all operating conditions, the device's total thermal limits should be observed.

### Supply Bypassing

Bypass each  $V_{CC}$  to  $V_{EE}$  with high-frequency surface-mount ceramic  $0.1\mu F$  and  $0.01\mu F$  capacitors. Place the capacitors as close to the device as possible, with the  $0.01\mu F$  capacitor closest to the device pins.

Use multiple vias when connecting the bypass capacitors to ground. When using the  $V_{BB0}$  or  $V_{BB1}$  reference outputs, bypass each one with a  $0.01\mu F$  ceramic capacitor to  $V_{CC}$ . If the  $V_{BB0}$  or  $V_{BB1}$  reference outputs are not used, they can be left open.

## Traces

Circuit board trace layout is very important to maintain the signal integrity of high-speed differential signals. Maintaining integrity is accomplished in part by reducing signal reflections and skew, and increasing common-mode noise immunity.

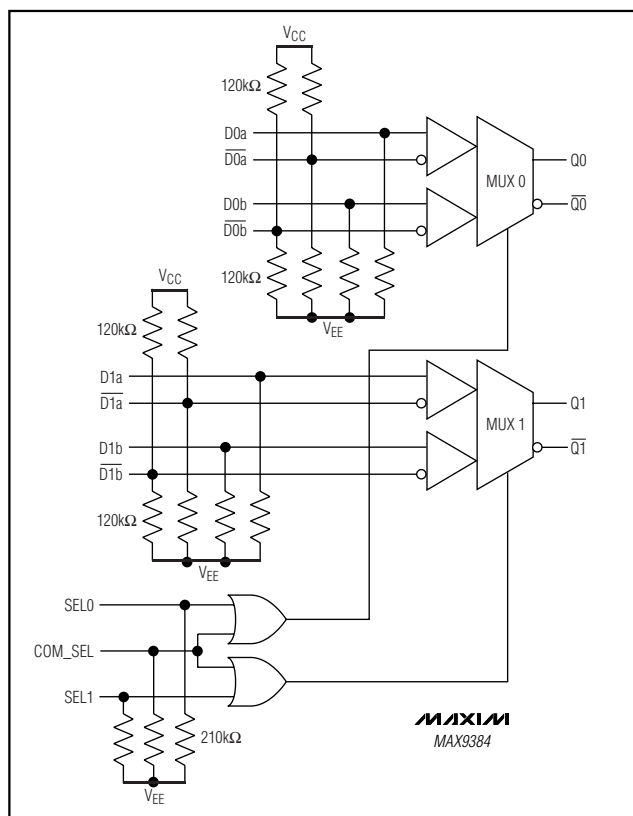

Signal reflections are caused by discontinuities in the  $50\Omega$  characteristic impedance of the traces. Avoid discontinuities by maintaining the distance between differential traces, not using sharp corners or using vias. Maintaining distance between the traces also increases common-mode noise immunity. Reducing signal skew is accomplished by matching the electrical length of the differential traces.

## Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
