Introduction

- Oscilloscope probe jack for output voltage and ripple measurements
- Simple to use
- Ring lug or solder connections
- Parallelable

Introduction

The Customer Evaluation Board offers a convenient means to evaluate the performance of Vicor's BCM bus converter and has been optimized for user convenience. Refer to the appropriate BCM data sheet for performance and operating limits. The data sheets are available for downloading at vicorpower.com.

It is important to remember the fast response of most BCMs can readily show the limitations of the source, load, and associated wiring connected to the evaluation board. Care should be exercised to minimize stray source and load impedances in order to fully exercise the BCM.

Please refer to Figure 1 for locations of the input and output connections as viewed from the component side. Wires may be soldered directly to the pads instead of ring lugs if desired to minimize circuit impedances.

Evaluation Board schematic

Set Up

The Customer Evaluation Board should be set up as follows:

Note: Care should be taken to avoid reversing polarities if connecting to the opposite (solder) side of the board.

+ IN, – IN

Connect a high-quality, low-noise power supply to the +IN and –IN terminals of the Customer Evaluation Board. The interconnect leads should be heavy gauge and as short as possible. Additional capacitance may have to be added on the evaluation board to make up for impedances in the interconnect leads as well as deficiencies in the source. It is important to remember that noise from the source, as well as any input source voltage drops, will appear at the output of the BCM® multiplied by its K factor. Test points 4 (–IN) and 5 (+IN) can be used to monitor the input and are located on the PCB adjacent to the input terminals.

+ OUT, –OUT

An electronic or passive load should be connected to +OUT and –OUT terminals of the Customer Evaluation Board with short heavy-gauge leads. Most commercially available electronic loads do not have current slew rates capable of fully exercising the BCM. The Customer Evaluation Board can be connected directly to the application for which the BCM is intended. However, the interconnect impedances between the Customer Evaluation Board and the application can greatly affect the transient response. For applications where transient response is critical, the user should consider mounting the BCM directly to the target application PCB. Test points 6 (–OUT) and 7 (+OUT) can be used to monitor the output and are located on the PCB adjacent to the output terminals.

Output Voltage Measurement Jack (J1)

This connector is provided to make accurate measurements of the output voltage of the BCM. Many types of scope probes may be directly connected to this point if the probe is equipped with a removable plastic sheath. To avoid creating ground loops when making measurements of the output or input voltage, these measurements should be made separately.

Paralleling

The paralleling and current sharing capability of the devices can be demonstrated by stacking multiple Customer Evaluation Boards and interconnecting the inputs and outputs with standoffs of sufficient current handling capability to create a 3-dimensional array. See Figure 3. When paralleling BCMs, the PC ports should be connected together to ensure the outputs turn on simultaneously.

Boards

Input Current Measurement

A current probe can be passed around the +in lead connected to the BCM®. Input capacitors on the Customer Evaluation Board are downstream of this measurement point.

TM - Do not connect, for factory use only.

VC - Do not connect, for factory use only.

Primary Control (PC)

The PC can be used to disable the BCM, monitor status, or provide a primary referenced bias supply.

- a. Connecting PC to the –in will disable the BCM.
- b. Connecting a DVM or oscilloscope between PC (positive) and –in (negative) will indicate the status of the BCM. Please note that the BCM does not have active current sinking capability.
- c. Connecting a load between PC (positive) and –in (negative) will provide a primary referenced bias supply.

Efficiency Measurement

As the BCM can deliver and consume large currents, the effect of the PCB must be considered when making an efficiency measurement. Be certain to accurately measure the voltage directly at the BCM using the appropriate pair of contact points located at the corners of the BCM.

Recommended Hardware:

Quantity	Description	Manufacturer P/N	Vicor P/N
4	ring lug	Panduit LCAS6-10-L	
4	#10-32 screw	}	Kit # 26647
4	#10 flat washer		
4	#10 lock washer		
4	#10 hex nut		

All hardware is stainless steel except the ring lug.
Kit # 26647 is included with the Customer Evaluation Board.

Thermals

For most lab environments a fan blowing across the evaluation board is recommended. See Application Note [AN:008](#) at vicorpower.com or contact Vicor Applications Engineering for assistance (800) 927-9474.

Caution

The BCM and Customer Evaluation Board can comfortably operate at surface temperatures which may pose a thermal hazard to the operator. Be careful not to touch any exposed surface. Certain BCMs may operate at potentially dangerous voltages, use care in such cases. The Customer Evaluation Board is not intended for use in end item equipment.

Ordering Information

The BCM® evaluation boards can be ordered from the Vicor website: vicorpower.com. To order the demo boards, substitute BCM with BCD in BCM part number.

See www.vicorpower.com/dc-dc-converters-board-mount/bus-converter-module for part number listing.

The Power Behind Performance

**Стандарт
Электрон
Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
