

# DisplayPort/PCIe Passive Switches

MAX4928A/MAX4928B

## General Description

The MAX4928A/MAX4928B high-speed passive switches route PCI Express® (PCIe) data and/or DisplayPort™ signals between two possible destinations in desktop or laptop PCs. The MAX4928A is intended to be used with the ATX form factor desktop PCs, while the MAX4928B is expected to be used in the BTX form factor.

The MAX4928A/MAX4928B are hex double-pole/double-throw (6 x DPDT) switches. The MAX4928A/MAX4928B feature a single digital control input (SEL) to switch signal paths and a latch input (LE) that holds the switches in a given state.

The MAX4928A/MAX4928B are fully specified to operate from a single +3.3V (typ) power supply. The MAX4928A/MAX4928B are available in an industry standard 5mm x 11mm, 56-pin TQFN package. Both devices operate over the -40°C to +85°C extended temperature range.

## Applications

- Desktop PCs
- Notebook PCs

PCI Express is a registered trademark of PCI-SIG.

DisplayPort is a trademark of Video Electronics Standards Association (VESA).

## Features

- ◆ Single +3.3V Power Supply Voltage
- ◆ Supports PCIe Gen I, Gen II, and DisplayPort Data Rates > 5Gbps
- ◆ Excellent Return Loss > 12dB at 2.5GHz
- ◆ Six Bidirectional Pairs of Switches All Switching in One Device
- ◆ Low 850µA (max) Supply Current
- ◆ Small 5mm x 11mm, 56-Pin TQFN Package
- ◆ Industry-Standard Pinouts

## Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
MAX4928AETN+	-40°C to +85°F	56 TQFN-EP
MAX4928BETN+	-40°C to +85°F	56 TQFN-EP

+ Denotes a lead-free package/RoHS-Compliant package.  
EP = Exposed paddle.

Typical Operating Circuit appears at end of data sheet.

## Pin Configurations

# DisplayPort/PCIe Passive Switches

## ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND, unless otherwise noted.)

V <sub>DD</sub> .....	-0.3V to +4V
LE, SEL, IN <sub>-</sub> , X <sub>-</sub> , OUT <sub>-</sub> , D <sub>-</sub> , TX <sub>-</sub> , HPD <sub>-</sub> , RX <sub>-</sub> , AUX <sub>-</sub> (Note 1).....	-0.3V to + (V <sub>DD</sub> + 0.3V)
IV <sub>IN<sub>-</sub></sub> - V <sub>TX<sub>-</sub></sub> I, IV <sub>IN<sub>-</sub></sub> - V <sub>D<sub>-</sub></sub> I, IV <sub>X<sub>-</sub></sub> - V <sub>HPD<sub>-</sub></sub> I, IV <sub>X<sub>-</sub></sub> - V <sub>RX1<sub>-</sub></sub> I, IV <sub>OUT<sub>-</sub></sub> - V <sub>AUX<sub>-</sub></sub> I, IV <sub>OUT<sub>-</sub></sub> - V <sub>RX0<sub>-</sub></sub> I (Note 1).....	0 to +2V
Continuous Current (IN <sub>-</sub> to D <sub>-</sub> /TX <sub>-</sub> , X <sub>-</sub> to HPD <sub>-</sub> /RX1 <sub>-</sub> , OUT <sub>-</sub> to AUX <sub>-</sub> /RX0 <sub>-</sub> ).....	±70mA
Peak Current (IN <sub>-</sub> to D <sub>-</sub> /TX <sub>-</sub> , X <sub>-</sub> to HPD <sub>-</sub> /RX1 <sub>-</sub> , OUT <sub>-</sub> to AUX <sub>-</sub> /RX0 <sub>-</sub> ) (pulsed at 1ms, 10% duty cycle).....	±70mA
Continuous Current (LE, SEL).....	±30mA

Peak Current (LE, SEL)

(pulsed at 1ms, 10% duty cycle).....	±70mA
Continuous Power Dissipation (T <sub>A</sub> = +70°C) for Multilayer Board 56-Pin TQFN (derate 41.0mW/°C above +70°C).....	3279mW
Operating Temperature Range .....	-40°C to +85°C
Junction Temperature .....	+150°C
Storage Temperature Range .....	-65°C to +150°C
Package Junction-to-Ambient Thermal Resistance (θ <sub>JA</sub> ) (Note 2) .....	24.4°C/W
Package Junction-to-Case Thermal Resistance (θ <sub>JC</sub> ) (Note 2) .....	1.5°C/W
Lead Temperature (soldering).....	+300°C

**Note 1:** Signals on IN<sub>-</sub>, X<sub>-</sub>, OUT<sub>-</sub>, D<sub>-</sub>, TX<sub>-</sub>, HPD<sub>-</sub>, RX<sub>-</sub>, or AUX<sub>-</sub>, LE, SEL exceeding V<sub>DD</sub> or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

**Note 2:** Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a 4-layer board. For detailed information on package thermal considerations, see [www.maxim-ic.com/thermal-tutorial](http://www.maxim-ic.com/thermal-tutorial).

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS

(V<sub>DD</sub> = +3.3V ±10%, T<sub>A</sub> = T<sub>MIN</sub> to T<sub>MAX</sub>, unless otherwise noted. Typical values are at V<sub>DD</sub> = +3.3V, T<sub>A</sub> = +25°C, unless otherwise noted.) (Note 3)

### Detailed Description

The MAX4928A/MAX4928B high-speed passive switches route PCI Express (PCIe) data and/or DisplayPort signals between two possible destinations. The MAX4928A/MAX4928B are ideal for routing signals between a graphics memory controller hub (GMCH) and either a DisplayPort or PCIe connector.

The MAX4928A/MAX4928B feature a single digital control input (SEL) to switch signal paths and a latch input (LE) that holds the switches in a given state.

#### Digital Control Input (SEL)

The MAX4928A/MAX4928B provide a single digital control input (SEL) to select the signal path between the IN<sub>-</sub> and D<sub>-</sub>/TX<sub>-</sub>, X<sub>-</sub> and HPD<sub>-</sub>/RX1<sub>-</sub>, and OUT<sub>-</sub> and AUX<sub>-</sub>/RX0<sub>-</sub> channels. The truth tables for the MAX4928A/MAX4928B are depicted in the *Functional Diagrams/Truth Table*. Drive SEL rail-to-rail to minimize power consumption.

#### Latch Control Input (LE)

The MAX4928A/MAX4928B provide a single digital control input (LE) to latch the signal paths between the IN<sub>-</sub> and D<sub>-</sub>/TX<sub>-</sub>, X<sub>-</sub> and HPD<sub>-</sub>/RX1<sub>-</sub>, and OUT<sub>-</sub> and AUX<sub>-</sub>/RX0<sub>-</sub> channels. When LE is driven high, the switches are held in their previous state, regardless of the input signal to SEL. Drive LE rail-to-rail to minimize power consumption.

#### Analog Signal Levels

The MAX4928A/MAX4928B accept standard PCIe signals to a maximum of (V<sub>DD</sub> - 1.8V). Signals on the IN<sub>+</sub> channels are routed to either the D<sub>+</sub> or TX<sub>+</sub> channels, signals on the X<sub>+</sub> channel are routed to either HPD1 or RX1+ channels, and signals on the OUT<sub>+</sub> channel are routed to either AUX<sub>+</sub> or RX0+ channels. Signals on the

IN<sub>-</sub> channels are routed to either the D<sub>-</sub> or TX<sub>-</sub> channels, signals on the X<sub>-</sub> channel are routed to either HPD2 or RX1- channels, and signals on the OUT<sub>-</sub> channel are routed to either AUX<sub>-</sub> or RX0- channels. The MAX4928A/MAX4928B are bidirectional switches, allowing IN<sub>-</sub>, X<sub>-</sub>, OUT<sub>-</sub>, D<sub>-</sub>, TX<sub>-</sub>, HPD<sub>-</sub>, RX<sub>-</sub>, and AUX<sub>-</sub> to be used as either inputs or outputs.

### Applications Information

#### DisplayPort/PCIe Switching

The MAX4928A/MAX4928B primary applications are aimed to switch between a GMCH and either a DisplayPort or PCIe connector. The MAX4928A/MAX4928B contain n-channel switches to permit differential signals to be selected between a PCIe Gen II socket or to a DisplayPort connector. Each device handles up to six pairs of signals. The DisplayPort signal is an AC-coupled 8b/10b encoded differential signal ranging up to 2.7 Gbps. The PCIe Gen I and Gen II signals are AC-coupled, 8b/10b encoded differential signals ranging up to 5.0Gbps.

#### Board Layout

High-speed switches require proper layout and design procedures for optimum performance. Keep design-controlled impedance PCB traces as short as possible or follow impedance layouts per the PCIe specification. Ensure that power-supply bypass capacitors are placed as close as possible to the device. Multiple bypass capacitors are recommended. Connect all grounds and the exposed pad to large ground planes.

## Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
