## Description

The CoolRunner™ XPLA3 XCR3128XL device is a 3.3V 128 macrocell CPLD targeted at power sensitive designs that require leading edge programmable logic solutions. A total of eight function blocks provide 3,000 usable gates. Pin-to-pin propagation delays are as fast as 5.5 ns with a maximum system frequency of 175 MHz.

## TotalCMOS Design Technique for Fast Zero Power

CoolRunner XPLA3 CPLDs offer a TotalCMOS™ solution, both in process technology and design technique. Xilinx employs a cascade of CMOS gates to implement its sum of products instead of the traditional sense amp approach. This CMOS gate implementation allows Xilinx CPLDs to offer devices that are both high performance and low power, breaking the paradigm that to have low power, you must have low performance. Refer to [Figure 1](#) or [Figure 2](#) and [Table 1](#) or [Table 2](#) showing the  $I_{CC}$  vs. Frequency of the XCR3128XL TotalCMOS CPLD (data taken with eight resettable up/down, 16-bit counters at 3.3V, 25°C).
