RF SOP 4 Form A CxR10
Voltage-sensitive (AQS221FO2S)**

mm inch

RoHS compliant

FEATURES

1. Built-in input resistor means less man-hours when mounting

The voltage-sensitive type, which eliminates the need to mount an external input resistor, is now available in a small package. Man-hours spent mounting external input resistors are cut and board designing is simplified.

2. Saves space on PC board

Since the small package size remains the same while including a built-in input resistor, space on the PC board is saved. This makes it easier to incorporate space savings when designing miniature devices.

3. Both low on-resistance (R type) and low capacitance (C type) available at excellent electrical characteristics of CxR10

- R type: On resistance 0.8Ω (typ.) Output capacitance 14pF (typ.)
- C type: On resistance 9.5Ω (typ.) Output capacitance 1.1pF (typ.)

TYPICAL APPLICATIONS

For multi-circuit switching;

- Measuring and testing equipment Semiconductor testing equipment, Probe cards, Datalogger, Board tester and other testing equipment
- Telecommunication and broadcasting equipment
- Medical equipment
