ADSP-BF533 EZ-KIT Lite®
Evaluation System Manual

Revision 3.1, September 2007

Part Number
82-000730-01

Analog Devices, Inc.
One Technology Way
Norwood, Mass. 02062-9106

ANALOG DEVICES

Copyright Information

Printed in the USA.

Limited Warranty

The EZ-KIT Lite evaluation system is warranted against defects in materials and workmanship for a period of one year from the date of purchase from Analog Devices or from an authorized dealer.

Disclaimer

Analog Devices, Inc. reserves the right to change this product without prior notice. Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use; nor for any infringement of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under the patent rights of Analog Devices, Inc.

Trademark and Service Mark Notice

The Analog Devices icon bar and logo, VisualDSP++, VisualDSP++ logo, Blackfin, Blackfin logo, CROSSCORE logo, EZ-KIT Lite, and EZ-Extender are registered trademarks of Analog Devices, Inc.

All other brand and product names are trademarks or service marks of their respective owners.

Regulatory Compliance

The ADSP-BF533 EZ-KIT Lite is designed to be used solely in a laboratory environment. The board is not intended for use as a consumer end product or as a portion of a consumer end product. The board is an open system design which does not include a shielded enclosure and therefore may cause interference to other electrical devices in close proximity. This board should not be used in or near any medical equipment or RF devices.

The ADSP-BF533 EZ-KIT Lite has been certified to comply with the essential requirements of the European EMC directive 89/336/EEC amended by 93/68/EEC and therefore carries the "**CE**" mark.

The ADSP-BF533 EZ-KIT Lite has been appended to Analog Devices, Inc. Technical Construction File (TCF) referenced '**DSPTOOLS1**' dated December 21, 1997 and was awarded CE Certification by an appointed European Competent Body as listed below.

Technical Certificate No: Z600ANA1.011

Issued by: Technology International (Europe) Limited
60 Shrivenham Hundred Business Park
Shrivenham, Swindon, SN6 8TY, UK

The EZ-KIT Lite evaluation system contains ESD (electrostatic discharge) sensitive devices. Electrostatic charges readily accumulate on the human body and equipment and can discharge without detection. Permanent damage may occur on devices subjected to high-energy discharges. Proper ESD precautions are recommended to avoid performance degradation or loss of functionality. Store unused EZ-KIT Lite boards in the protective shipping package.

CONTENTS

PREFACE

PREFACE

Thank you for purchasing the ADSP-BF533 EZ-KIT Lite®, Analog Devices, Inc. evaluation system for Blackfin® processors.

Blackfin processors support a media instruction set computing (MISC) architecture. This architecture is the natural merging of RISC, media functions, and digital signal processing (DSP) characteristics. Blackfin processors deliver signal-processing performance in a microprocessor-like environment.

The evaluation board is designed to be used in conjunction with the VisualDSP++® development environment to test the capabilities of ADSP-BF533 Blackfin processors. The VisualDSP++ development environment gives you the ability to perform advanced application code development and debug, such as:

- Create, compile, assemble, and link application programs written in C++, C, and ADSP-BF533 assembly
- Load, run, step, halt, and set breakpoints in application programs
- Read and write data and program memory
- Read and write core and peripheral registers
- Plot memory

Access to the ADSP-BF533 processor from a personal computer (PC) is achieved through a USB port or an optional JTAG emulator. The USB interface gives unrestricted access to the ADSP-BF533 processor and the evaluation board peripherals. Analog Devices JTAG emulators offer faster

communication between the host PC and target hardware. Analog Devices carries a wide range of in-circuit emulation products. To learn more about Analog Devices emulators and processor development tools, go to http://www.analog.com/dsp/tools/.

The ADSP-BF533 EZ-KIT Lite provides example programs to demonstrate the capabilities of the evaluation board.

The ADSP-BF533 EZ-KIT Lite installation is part of the VisualDSP++ installation. The EZ-KIT Lite is a licensed product that offers an unrestricted evaluation license for the first 90 days. For details about evaluation license restrictions after the 90 days, refer to "Evaluation License Restrictions" on page 1-7 and the *VisualDSP++ Installation Quick Reference Card*.

The board features:

- Analog Devices ADSP-BF533 Blackfin processor
  - Performance up to 600 MHz
  - 160-pin mini-BGA package
  - 27 MHz `CLKIN` oscillator
- Synchronous dynamic random access memory (SDRAM)
  - MT48LC32M16 - 64 MB (32M x 16 bits)
- Flash memories
  - 2 MB (512K x 16 x 2chips)
- Analog audio interface
  - AD1836 – Analog Devices 96 kHz audio codec
  - 4 input RCA phono jacks (2 channels)
  - 6 output RCA phono jacks (3 channels)

- Analog video interface
  - ADV7183 video decoder w/ 3 input RCA phono jacks
  - ADV7171 video encoder w/ 3 output RCA phono jacks
- Universal asynchronous receiver/transmitter (UART)
  - ADM3202 RS-232 line driver/receiver
  - DB9 male connector
- LEDs
  - 10 LEDs: 1 power (green), 1 board reset (red), 1 USB (red), 6 general-purpose (amber), and 1 USB monitor (amber)
- Push buttons
  - 5 push buttons with debounce logic: 1 reset, 4 programmable flags
- Expansion interface
  - PPI, SPI, EBIU, Timers2-0, UART, programmable flags, SPORT0, SPORT1
- Other features
  - JTAG ICE 14-pin header

The EZ-KIT Lite board has two flash memories with a total of 2 MB of memory. The flash memories can be used to store user-specific boot code, allowing the board to run as a stand-alone unit. For more information, see "Flash Memory" on page 1-10. The board also has 64 MB of SDRAM, which can be used by the user at runtime.

SPORTs interface with the AD1836 audio codec to aid development of audio signal processing applications. SPORT0 also attaches to an off-board connector for communication with other serial devices. For information about SPORT0, see "SPORT Audio Interface" on page 2-3.

The parallel peripheral interface (PPI) of the processor connects to both a video encoder and video decoder, facilitating development of video signal processing applications.

The UART of the processor connects to an RS-232 line driver and a DB9 male connector, providing an interface to a PC or other serial device.

Additionally, the EZ-KIT Lite board provides access to most of the processor's peripheral ports. Access is provided in the form of a three-connector expansion interface. For information about the expansion interface, see "Expansion Interface" on page 2-8.

Purpose of This Manual

The *ADSP-BF533 EZ-KIT Lite Evaluation System Manual* provides instructions for installing the product hardware (board). The text describes the operation and configuration of the board components and provides guidelines for running your own code on the ADSP-BF533 EZ-KIT Lite. Finally, a schematic and a bill of materials are provided as a reference for future designs.

The product software installation is detailed in the *VisualDSP++ Installation Quick Reference Card*.

Intended Audience

The primary audience for this manual is a programmer who is familiar with Analog Devices processors. This manual assumes that the audience has a working knowledge of the appropriate processor architecture and instruction set. Programmers who are unfamiliar with Analog Devices processors can use this manual but should supplement it with other texts (such as the *ADSP-BF533 Processor Hardware Reference* and the *Blackfin Processor Instruction Set Reference*) that describe your target architecture.

Programmers who are unfamiliar with VisualDSP++ should refer to the VisualDSP++ online Help and user's or getting started guides. For the locations of these documents, see "Related Documents".

Manual Contents

The manual consists of:

- Chapter 1, "Using ADSP-BF533 EZ-KIT Lite" on page 1-1
  Describes the EZ-KIT Lite functionality from a programmer's perspective and provides an easy-to-access memory map.
- Chapter 2, "ADSP-BF533 EZ-KIT Lite Hardware Reference" on page 2-1
  Provides information on the EZ-KIT Lite hardware components.
- Appendix A, "ADSP-BF533 EZ-KIT Lite Bill Of Materials" on page A-1
  Provides a list of components used to manufacture the EZ-KIT Lite board.
- Appendix B, "ADSP-BF533 EZ-KIT Lite Schematic" on page B-1
  Provides the resources to allow EZ-KIT Lite board-level debugging or to use as a reference design.

Appendix B now is part of the online Help. The PDF version of the *ADSP-BF533 EZ-KIT Lite Evaluation System Manual* is located in the `Docs\EZ-KIT Lite Manuals` folder on the installation CD. Alternatively, the schematics can be found on the Analog Devices Web site: `www.analog.com/processors`.

What's New in This Manual

The *ADSP-BF533 EZ-KIT Lite Evaluation System Manual* has been updated for the current revision of VisualDSP++.

Appendix B, "ADSP-BF533 EZ-KIT Lite Schematic" on page B-1 have been updated to reflect the latest revision of the board.

Technical or Customer Support

You can reach Analog Devices, Inc. Customer Support in the following ways:

- Visit the Embedded Processing and DSP products Web site at
  `http://www.analog.com/processors/technicalSupport`
- E-mail tools questions to
  `processor.tools.support@analog.com`
- E-mail processor questions to
  `processor.support@analog.com (World wide support)`
  `processor.europe@analog.com (Europe support)`
  `processor.china@analog.com (China support)`
- Phone questions to **1-800-ANALOGD**
- Contact your Analog Devices, Inc. local sales office or authorized distributor
- Send questions by mail to:
  `Analog Devices, Inc.`
  `One Technology Way`
  `P.O. Box 9106`
  `Norwood, MA 02062-9106`
  `USA`

Supported Processors

This evaluation system supports Analog Devices ADSP-BF533 Blackfin processors.

Product Information

You can obtain product information from the Analog Devices Web site, from the product CD-ROM, or from printed publications (manuals).

Analog Devices is online at www.analog.com. Our Web site provides information about a broad range of products—analog integrated circuits, amplifiers, converters, and digital signal processors.

MyAnalog.com

MyAnalog.com is a free feature of the Analog Devices Web site that allows customization of a Web page to display only the latest information on products you are interested in. You can also choose to receive weekly e-mail notifications containing updates to the Web pages that meet your interests. MyAnalog.com provides access to books, application notes, data sheets, code examples, and more.

Registration:

Visit www.myanalog.com to sign up. Click **Register** to use MyAnalog.com. Registration takes about five minutes and serves as means for you to select the information you want to receive.

If you are already a registered user, just log on. Your user name is your e-mail address.

Processor Product Information

For information on embedded processors and DSPs, visit our Web site at www.analog.com/processors, which provides access to technical publications, data sheets, application notes, product overviews, and product announcements.

You may also obtain additional information about Analog Devices and its products in any of the following ways.

- E-mail questions or requests for information to
  processor.support@analog.com (World wide support)
  processor.europe@analog.com (Europe support)
  processor.china@analog.com (China support)
- Fax questions or requests for information to
  1-781-461-3010 (North America)
  +49-89-76903-157 (Europe)

Related Documents

For information on product related development software, see the following publications.

Table 1. Related Processor Publications

Title	Description
ADSP-BF533 Embedded Processor Datasheet	General functional description, pinout, and timing.
ADSP-BF533 Blackfin Processor Hardware Reference	Description of internal processor architecture and all register functions.
Blackfin Processor Instruction Set Reference	Description of all allowed processor assembly instructions.

Table 2. Related VisualDSP++ Publications

Title	Description
VisualDSP++ User's Guide	Description of VisualDSP++ features and usage.
VisualDSP++ Assembler and Preprocessor Manuals	Description of the assembler function and commands.
VisualDSP++ C/C++ Complier and Library Manual for Blackfin Processors	Description of the complier function and commands for Blackfin processors.
VisualDSP++ Linker and Utilities Manual	Description of the linker function and commands.
VisualDSP++ Loader and Utilities Manual	Description of the loader/splitter function and commands.

If you plan to use the EZ-KIT Lite board in conjunction with a JTAG emulator, also refer to the documentation that accompanies the emulator.

All documentation is available online. Most documentation is available in printed form.

Visit the Technical Library Web site to access all processor and tools manuals and data sheets: `http://www.analog.com/processors/technicalSupport/technicalLibrary/`.

Online Technical Documentation

Online documentation comprises the VisualDSP++ Help system, software tools manuals, hardware tools manuals, processor manuals, the Dinkum Abridged C++ library, and Flexible License Manager (FlexLM) network license manager software documentation. You can easily search across the entire VisualDSP++ documentation set for any topic of interest. For easy printing, supplementary `.pdf` files of most manuals are provided in the `Docs` folder on the VisualDSP++ installation CD.

Each documentation file type is described as follows.

File	Description
`.chm`	Help system files and manuals in Help format
`.htm` or `.html`	Dinkum Abridged C++ library and FlexLM network license manager software documentation. Viewing and printing the `.html` files requires a browser, such as Internet Explorer 6.0 (or higher).
`.pdf`	VisualDSP++ and processor manuals in Portable Documentation Format (PDF). Viewing and printing the `.pdf` files requires a PDF reader, such as Adobe Acrobat Reader (4.0 or higher).

If documentation is not installed on your system as part of the software installation, you can add it from the VisualDSP++ CD at any time by running the Tools installation. Access the online documentation from the VisualDSP++ environment, Windows® Explorer, or the Analog Devices Web site.

Accessing Documentation From VisualDSP++

To view VisualDSP++ Help, click on the **Help** menu item or go to the Windows task bar and navigate to the VisualDSP++ documentation via the **Start** menu.

To view ADSP-BF533 EZ-KIT Lite Help, which is part of the VisualDSP++ Help system, use the **Contents** or **Search** tab of the Help window.

Accessing Documentation From Windows

In addition to any shortcuts you may have constructed, there are many ways to open VisualDSP++ online Help or the supplementary documentation from Windows.

Help system files (.chm) are located in the Help folder, and .pdf files are located in the Docs folder of your VisualDSP++ installation CD-ROM. The Docs folder also contains the Dinkum Abridged C++ library and the FlexLM network license manager software documentation.

Your software installation kit includes online Help as part of the Windows interface. These help files provide information about VisualDSP++ and the ADSP-BF533 EZ-KIT Lite evaluation system.

Accessing Documentation From Web

Download manuals at the following Web site: http://www.analog.com/processors/technicalSupport/technicalLibrary/.

Select a processor family and book title. Download archive (.zip) files, one for each manual. Use any archive management software, such as WinZip, to decompress downloaded files.

Printed Manuals

For general questions regarding literature ordering, call the Literature Center at **1-800-ANALOGD** (**1-800-262-5643**) and follow the prompts.

Hardware Tools Manuals

To purchase EZ-KIT Lite and in-circuit emulator (ICE) manuals, call **1-603-883-2430**. The manuals may be ordered by title or by product number located on the back cover of each manual.

Processor Manuals

Hardware reference and instruction set reference manuals may be ordered through the Literature Center at **1-800-ANALOGD** (**1-800-262-5643**), or downloaded from the Analog Devices Web site. Manuals may be ordered by title or by product number located on the back cover of each manual.

Data Sheets

All data sheets (preliminary and production) may be downloaded from the Analog Devices Web site. Only production (final) data sheets (Rev. 0, A, B, C, and so on) can be obtained from the Literature Center at **1-800-ANALOGD** (**1-800-262-5643**); they also can be downloaded from the Web site.

To have a data sheet faxed to you, call the Analog Devices Faxback System at **1-800-446-6212**. Follow the prompts and a list of data sheet code numbers will be faxed to you. If the data sheet you want is not listed, check for it on the Web site.

Notation Conventions

Text conventions used in this manual are identified and described as follows.

Example	Description
Close command (**File** menu)	Titles in reference sections indicate the location of an item within the VisualDSP++ environment's menu system (for example, the **Close** command appears on the **File** menu).
`{this | that}`	Alternative required items in syntax descriptions appear within curly brackets and separated by vertical bars; read the example as `this` or `that`. One or the other is required.

Example	Description
`[this | that]`	Optional items in syntax descriptions appear within brackets and separated by vertical bars; read the example as an optional `this` or `that`.
`[this,…]`	Optional item lists in syntax descriptions appear within brackets delimited by commas and terminated with an ellipse; read the example as an optional comma-separated list of `this`.
`.SECTION`	Commands, directives, keywords, and feature names are in text with `letter gothic` font.
`filename`	Non-keyword placeholders appear in text with italic style format.
	**Note:** For correct operation, ... A Note provides supplementary information on a related topic. In the online version of this book, the word **Note** appears instead of this symbol.
	**Caution:** Incorrect device operation may result if ... **Caution:** Device damage may result if ... A Caution identifies conditions or inappropriate usage of the product that could lead to undesirable results or product damage. In the online version of this book, the word **Caution** appears instead of this symbol.
	**Warning:** Injury to device users may result if ... A Warning identifies conditions or inappropriate usage of the product that could lead to conditions that are potentially hazardous for the devices users. In the online version of this book, the word **Warning** appears instead of this symbol.

1 USING ADSP-BF533 EZ-KIT LITE

This chapter provides specific information to assist you with development of programs for the ADSP-BF533 EZ-KIT Lite evaluation system.

The information appears in the following sections.

- "Audio Interface" on page 1-15
  Describes the board's audio interface.
- "Video Interface" on page 1-16
  Describes the board's video interface.
- "Example Programs" on page 1-17
  Provides information about the example programs included in the ADSP-BF533 EZ-KIT Lite evaluation system.
- "Background Telemetry Channel" on page 1-17
  Highlights the advantages of the background telemetry channel feature of VisualDSP++.

For information on the graphical user interface, including the boot loading, target options, and other facilities of the EZ-KIT Lite system, refer to the online Help.

For more detailed information about programming the ADSP-BF533 Blackfin processor, see the documents referred to as "Related Documents".

Package Contents

Your ADSP-BF533 EZ-KIT Lite evaluation system package contains the following items.

- ADSP-BF533 EZ-KIT Lite board
- *VisualDSP++ Installation Quick Reference Card*
- CD containing:
  - VisualDSP++ software
  - ADSP-BF533 EZ-KIT Lite debug software

- USB driver files
- Example programs
- ADSP-BF533 *EZ-KIT Lite Evaluation System Manual* (this document)

- Universal 7.5V DC power supply
- USB 2.0 type cable
- Registration card (please fill out and return)

If any item is missing, contact the vendor where you purchased your EZ-KIT Lite or contact Analog Devices, Inc.

Default Configuration

The EZ-KIT Lite evaluation system contains ESD (electrostatic discharge) sensitive devices. Electrostatic charges readily accumulate on the human body and equipment and can discharge without detection. Permanent damage may occur on devices subjected to high-energy discharges. Proper ESD precautions are recommended to avoid performance degradation or loss of functionality. Store unused EZ-KIT Lite boards in the protective shipping package.

The ADSP-BF533 EZ-KIT Lite board is designed to run outside your personal computer as a stand-alone unit. You do not have to open your computer case.

When removing the EZ-KIT Lite board from the package, handle the board carefully to avoid the discharge of static electricity, which may damage some components. Figure 1-1 shows the default jumper settings, DIP switch, connector locations, and LEDs used in installation. Confirm that your board is set up in the default configuration before using the board.

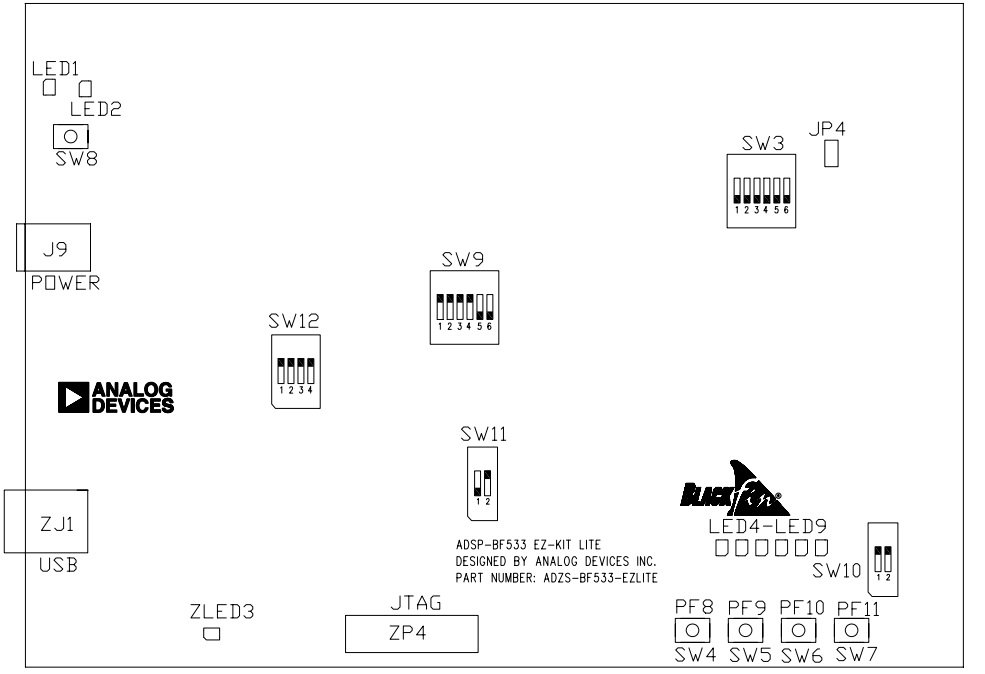

Figure 1-1. EZ-KIT Lite Hardware Setup

To connect the EZ-KIT Lite board:

1. Plug the provided power supply into J9 on the EZ-KIT Lite board. Visually verify that the green power LED (LED1) is on. Also verify that the red reset LED (LED2) goes on for a moment and then goes off.

2. Connect one end of the USB cable to an available full speed USB port on your PC and the other end to ZJ1 on the ADSP-BF533 EZ-KIT Lite board.

Installation and Session Startup

For correct operation, install the software and hardware in the order presented in the *VisualDSP++ Installation Quick Reference Card*.

1. Verify that the yellow USB monitor LED (ZLED3, located near the USB connector) is lit. This signifies that the board is communicating properly with the host PC and is ready to run VisualDSP++.
2. If you are running VisualDSP++ for the first time, navigate to the VisualDSP++ environment via the **Start** –> **Programs** menu. The main window appears. Note that VisualDSP++ does not connect to any session. Skip the rest of this step to step 3.

   If you have run VisualDSP++ previously, the last opened session appears on the screen. You can override the default behavior and force VisualDSP++ to start a new session by pressing and holding down the **Ctrl** key while starting VisualDSP++. Do not release the **Ctrl** key until the **Session Wizard** appears on the screen. Go to step 4.
3. To connect to a new EZ-KIT Lite session, start **Session Wizard** by selecting one of the following.
   - From the **Session** menu, **New Session**.
   - From the **Session** menu, **Session List**. Then click **New Session** from the **Session List** dialog box.
   - From the **Session** menu, **Connect to Target**.
4. The **Select Processor** page of the wizard appears on the screen. Ensure **Blackfin** is selected in **Processor family**. In **Choose a target processor**, select **ADSP-BF533**. Click **Next**.
5. The **Select Connection Type** page of the wizard appears on the screen. Select **EZ-KIT Lite** and click **Next**.

6. The **Select Platform** page of the wizard appears on the screen. Ensure that the selected platform is **ADSP-BF533 EZ-KIT Lite via Debug Agent**. Specify your own **Session name** for your session or accept the default name.

   The session name can be a string of any length; although, the box displays approximately 32 characters. The session name can include space characters. If you do not specify a session name, VisualDSP++ creates a session name by combining the name of the selected platform with the selected processor. The only way to change a session name later is to delete the session and to open a new session.

   Click **Next**.

7. The **Finish** page of the wizard appears on the screen. The page displays your selections.Check the selections. If you are not satisfied, click **Back** to make changes; otherwise, click **Finish**. VisualDSP++ creates the new session and connects to the EZ-KIT Lite. Once connected, the main window's title is changed to include the session name set in step 6.

To disconnect from a session, click the disconnect button  or select **Session–>Disconnect from Target**.

To delete a session, select **Session –> Session List**. Select the session name from the list and click **Delete**. Click **OK**.

Evaluation License Restrictions

The ADSP-BF533 EZ-KIT Lite installation is part of the VisualDSP++ installation. The EZ-KIT Lite is a licensed product that offers an unrestricted evaluation license for the first 90 days. Once the initial unrestricted 90-day evaluation license expires:

- VisualDSP++ allows a connection to the ADSP-BF533 EZ-KIT Lite via the USB debug agent interface only. Connections to simulators and emulation products are no longer allowed.
- The linker restricts a users program to 20 KB of internal memory for code space with no restrictions for data space.

The EZ-KIT Lite hardware must be connected and powered up to use VisualDSP++ with a valid evaluation or permanent license.

Refer to the *VisualDSP++ Installation Quick Reference Card* for details.

Memory Map

The ADSP-BF533 processor has internal SRAM that can be used for instruction or data storage. The configuration of internal SRAM is detailed in the *ADSP-BF533 Processor Hardware Reference*.

The ADSP-BF533 EZ-KIT Lite board includes two types of external memory, SDRAM and flash memory.

The size of the SDRAM is 64 Mbytes (32M x 16-bits). The processor's memory select pin `~SMS0` is configured for the SDRAM.

The flash memory is implemented with two dual-bank flash memory devices. These devices include primary and secondary flash memory as well as internal SRAM and registers. Primary flash memory totals 2 Mbytes mapped into two separate asynchronous memory banks,

1 Mbyte each. Secondary flash memory, along with SRAM and registers, occupies the third bank of asynchronous memory space. The processor's ~AMS0, ~AMS1, and ~AMS2 memory select pins are used for that purpose.

Table 1-1. EZ-KIT Lite Evaluation Board Memory Map

Start Address		End Address	Content
External Memory	0x0000 0000	0x07FF FFFF	SDRAM bank 0 (SDRAM). See "SDRAM Interface" on page 1-9.
	0x2000 0000	0x200F FFFF	ASYNC memory bank 0 (primary flash A). See "Flash Memory" on page 1-10.
	0x2010 0000	0x201F FFFF	ASYNC memory bank 1 (primary flash B). See "Flash Memory" on page 1-10.
	0x2020 0000	0x202F FFFF	ASYNC memory bank 2 (flash A and B secondary memory, SRAM and internal registers). See "Flash Memory" on page 1-10.
	All other locations		Not used
Internal Memory	0xFF80 0000	0xFF80 3FFF	Data bank A SRAM 16 KB
	0xFF80 4000	0xFF80 7FFF	Data bank A SRAM/CACHE 16 KB
	0xFF90 0000	0xFF90 3FFF	Data bank B SRAM 16 KB
	0xFF90 4000	0xFF90 7FFF	Data bank B SRAM/CACHE 16 KB
	0xFFA0 0000	0xFFA0 FFFF	Instruction SRAM 64 KB
	0xFFA1 0000	0xFFA1 3FFF	Instruction SRAM /CACHE 16 KB
	0xFFB0 0000	0xFFB0 0FFF	Scratch pad SRAM 4 KB
	0xFFC0 0000	0xFFDF FFFF	System MMRs 2 MB
	0xFFE0 0000	0xFFFF FFFF	Core MMRs 2 MB
	All other locations		Reserved

SDRAM Interface

The three SDRAM control registers must be initialized in order to use the MT48LC32M16 – 64 MB (32M x 16 bits) SDRAM memory.

If you are in an EZ-KIT Lite or emulator session and a reset operation is performed, the SDRAM registers are set automatically to the values listed in Table 1-2. To disable this feature, clear the **Use XML reset values** check box on the **Target Options** dialog box, which is accessible through the **Settings** pull-down menu. The values are derived for maximum flexibility and work for a system clock frequency between 54 MHz and 133 MHz. For more information about the Target Options dialog box, see the online Help.

Automatic configuration of SDRAM is not optimized for any SCLK frequency. Table 1-2 shows the optimized configuration for the SDRAM registers using a 118.8 MHz, 126 MHz, and 133 MHz SCLK. The frequency of 118.8 MHz is the maximum SCLK frequency when using a 594 MHz core frequency, the maximum frequency for the EZ-KIT Lite when using the internal voltage regulator. Only the EBIU_SDRRC register needs to be modified in the user code to achieve maximum performance.

Table 1-2. SDRAM Optimum Settings

Register	SCLK = 133 MHz (Processor MAX)	SCLK = 126 MHz (CCLK = 756 MHz)	SCLK = 118.8 MHz (CCLK = 594 MHz)
EBIU_SDGCTL	0x0091 998D	0x0091 998D	0x0091 998D
EBIU_SDBCTL			
ADSP-BF533 EZ-KIT Lite revision 1.5 and below	0x0000 0013	0x0000 0013	0x0000 0013
ADSP-BF533 EZ-KIT Lite revision 1.6 and above	0x0000 0025	0x0000 0025	0x0000 0025
EBIU_SDRRC	0x0000 0406	0x0000 03CF	0x0000 0397

An example program is included in the EZ-KIT Lite installation directory to demonstrate how to set up the SDRAM interface.

Flash Memory

The following sections describe how to use the memory and general-purpose IO pins, as well as how to configure the flash memory devices.

The ADSP-BF533 EZ-KIT Lite board employs two PSD4256G6V flash general-purpose IO devices from STMicroelectronics. These devices not only have flash memory but also extra IO pins, which are memory mapped.

Example code is provided in the EZ-KIT Lite installation directory to demonstrate how to program the flash memory as well as to demonstrate the functionality of the general-purpose IO pins.

Flash Memory Map

Each device includes the following memory segments:

- 1M byte of primary flash memory
- 64K bytes of secondary flash memory
- 32 Kbytes of internal SRAM
- 256 Bytes of configuration registers (IO control)

Access to each segment can be 8-bit or 16-bit. The processor's ~AMS0, ~AMS1, and ~AMS2 memory select pin are used for that purpose. Asynchronous memory bank 0 is always enabled after a hard reset, while banks 1 and 2 need to be enabled by software. Table 1-3 provides an example on asynchronous memory configuration registers.

Table 1-3. Asynchronous Memory Control Registers Settings Example

Register	Value	Function
EBIU_AMBCTL0	0x7BB07BB0	Timing control for banks 1 and 0
EBIU_AMBCTL1 bits 15-0	0x7BB0	Timing control for bank 2 (bank 3 is not used)
EBIU_AMGCTL bits 3-0	0xF	Enable all banks

Each flash chip is initially configured with the memory sectors mapped into the processor's address space shown in Table 1-4.

Table 1-4. Flash Memory Map

Start Address	End Address	Content
0x2000 0000	0x200F FFFF	Flash A primary (1MB)
0x2010 0000	0x201F FFFF	Flash B primary (1MB)
0x2020 0000	0x2020 FFFF	Flash A secondary (64KB)
0x2024 0000	0x2024 7FFF	Flash A SRAM (32KB)

Flash General-Purpose IO

This section describes general-purpose IO signals that are controlled by means of setting appropriate registers of the flash A or flash B. These registers are mapped into the processor's address space, as shown in Table 1-4.

Flash device IO pins are arranged as 8-bit ports labeled `A` through `G`. There is a set of 8-bit registers associated with each port. These registers are `Direction`, `Data In`, and `Data Out`. Note that the `Direction` and `Data Out` registers are cleared to all zeros at power-up or hardware reset.

The `Direction` register controls IO pins direction. When a bit is `0`, a corresponding pin functions as an input. When the bit is `1`, a corresponding pin is an output. This is a 8-bit read-write register.

The `Data In` register allows reading the status of port's pins. This is a 8-bit read-only register.

The `Data Out` register allows clearing an output pin to `0` or setting it to `1`. This is a 8-bit read-write register.

The ADSP-BF533 EZ-KIT Lite board employs only flash A and flash B ports A and B. Table 1-5 and Table 1-6 provide configuration register addresses for flash A and flash B, respectively (only ports A and B are listed). The following bits connect to the expansion board connector.

- Flash A: port A bits `7` and `6`, as well as port B bits `7` and `6`
- Flash B: port A bits `7-0`

Table 1-5. Flash A Configuration Registers for Ports A and B

Register Name	Port A Address	Port B Address
`Data In` (read-only)	`0x2027 0000`	`0x2027 0001`
`Data Out` (read-write)	`0x2027 0004`	`0x2027 0005`
`Direction` (read-write)	`0x2027 0006`	`0x2027 0007`

Table 1-6. Flash B Configuration Registers for Ports A and B

Register Name	Port A Address	Port B Address
Data In (read-only)	0x202E 0000	0x202E 0001
Data Out (read-write)	0x202E 0004	0x202E 0005
Direction (read-write)	0x202E 0006	0x202E 0007

Table 1-7 and Table 1-8 depict the IO assignments.

Table 1-7. Flash A Port A Controls

Bit Number	User IO	Bit Value
7	Not defined	Any
6	Not defined	Any

0	LED4	0= LED OFF; 1= LED ON

Configuring Flash Memory

The flash memory is completely configurable. Use PSDsoft Express™ to modify the default settings of each flash memory. After the project has been modified, the flash memory must be re-programmed using FlashLINK™. The default project file is provided in …\Blackfin\Examples\ADSP-BF533 EZ-KIT Lite\PSD4256G_ConfigFiles directory. Analog Devices does not provide any support for setting up the PSD4256G6V with PSDsoft Express or programming it using FlashLINK. Email STMicroelectronics at apps.psd@st.com for technical assistance.

The PSD4256G6Vcan be re-programmed using the FlashLINK JTAG programming cable available from STMicoreclectronics (www.st.com/psd) for approximately $59. FlashLINK plugs into any PC parallel port. The PSDsoft Express development software is required to modify the DSM2150 configuration and to operate the FlashLINK cable. PSDsoft Express can be downloaded at no charge from www.st.com/psd.

LEDs and Push Buttons

The EZ-KIT Lite provides four push buttons and six LEDs for general-purpose IO.

The six LEDs, labeled LED4 through LED9, are accessed via some of the general-purpose IO pins of the flash memory interface. For information on how to program the pins, see "Flash General-Purpose IO" on page 1-12.

The four general-purpose push button are labeled SW4 through SW7. A status of each individual button can be read through programmable flag (PF) inputs, PF8 through PF11. A PF reads 1 when a corresponding switch is being pressed-on. When the switch is released, the PF reads 0. A connection between the push button and PF input is established through the SW9 DIP switch. See "Push Button Enable Switch (SW9)" on page 2-12 for details.

An example program is included in the EZ-KIT Lite installation directory to demonstrate the functionality of the LEDs and push buttons.

Audio Interface

The AD1836 audio codec provides three channels of stereo audio output and two channels of multichannel 96 kHz input. The SPORT0 interface of the processor links with the stereo audio data input and output pins of the AD1836 codec. The processor is capable of transferring data to the audio codec in time-division multiplexed (TDM) or two-wire interface (TWI) mode.

The TWI mode allows the codec to operate at a 96 kHz sample rate but limits the output channels to two. The TDM mode can operate at a maximum of 48 kHz sample rate but allows simultaneous use of all input and output channels. When using TWI mode, the TSCLK0 and RSCLK0 pins, as well as the TFS0 and RFS0 pins of the processor, must be tied together

external to the processor. This is accomplished with the SW9 DIP switch (see "Push Button Enable Switch (SW9)" on page 2-12 for more information).

The AD1836 audio codec's internal configuration registers are configured using the SPI port of the processor. The processor's PF4 programmable flag pin is used as the select for this device. For information on how to configure the multichannel codec, go to www.analog.com/UploadedFiles/Datasheets/344740003AD1836_prc.pdf.

The general-purpose IO pin PA0 of flash A is a source for the AD1836 codec reset. See "Flash General-Purpose IO" on page 1-12 for more information about the pin.

Example programs are included in the EZ-KIT Lite installation directory to demonstrate AD1836 codec capabilities.

Video Interface

The board supports video input and output applications. The ADV7171 video encoder provides up to three output channels of analog video, while the ADV7183 video decoder provides up to three input channels of analog video. Both the encoder and the decoder connect to the parallel peripheral interface (PPI) of the processor. For additional information on the video interface hardware, refer to "PPI Interface" on page 2-5.

For the video interface to be operational, the following basic steps must be performed.

1. Configure the SW3 DIP switch as required by the application. Refer to "Video Configuration Switch (SW3)" on page 2-11 for details.
2. Remove reset to the video device. Refer to "Flash General-Purpose IO" on page 1-12 for details.

3. If using the decoder:
   - Enable device by driving programmable flag output PF2 to 0.
   - Select PPI clock (see Table 1-7 on page 1-13).
4. Program internal registers of the video device in use. Both video encoder and decoder use a two-wire serial interface to access internal registers. A programmable flag PF0 functions as a serial clock (SCL), and PF1 functions as a serial data (SDAT).
5. Program the processor's PPI interface (configuration registers, DMA, etc.).

Example programs are included in the EZ-KIT Lite installation directory to demonstrate the capabilities of the video interface.

Example Programs

Example programs are provided with the ADSP-BF533 EZ-KIT Lite to demonstrate various capabilities of the evaluation board. These programs are installed with the EZ-KIT Lite software and can be found in the …\Blackfin\Examples\ADSP-BF533 EZ-KIT Lite subdirectory of the VisualDSP++ installation directory. Please refer to the readme file provided with each example for more information.

Background Telemetry Channel

The ADSP-BF533 USB debug agent supports the background telemetry channel (BTC), which facilitates data exchange between VisualDSP++ and the processor without interrupting processor execution.

The BTC allows you to view a variable as it is updated or changed, all while the processor continues to execute. For increased performance of the BTC, including faster reading and writing, please check our latest line of processor emulators at http://www.analog.com/processors/resources/crosscore/emulators/index.html. For more information about the background telemetry channel, see the *VisualDSP++ User's Guide* or online Help.

2 ADSP-BF533 EZ-KIT LITE HARDWARE REFERENCE

This chapter describes the hardware design of the ADSP-BF533 EZ-KIT Lite board. The following topics are covered.

- "System Architecture" on page 2-2
  Describes the configuration of the ADSP-BF533 EZ-KIT Lite board and explains how the board components interface with the processor.
- "Jumper and Switch Settings" on page 2-10
  Shows the location and describes the function of the configuration jumpers and switches.
- "LEDs and Push Buttons" on page 2-13
  Shows the location and describes the function of the LEDs and push buttons.
- "Connectors" on page 2-17
  Shows the location and gives the part number for all of the connectors on the board. Also, the manufacturer and part number information is given for the mating parts.

System Architecture

This section describes the processor's configuration on the EZ-KIT Lite board.

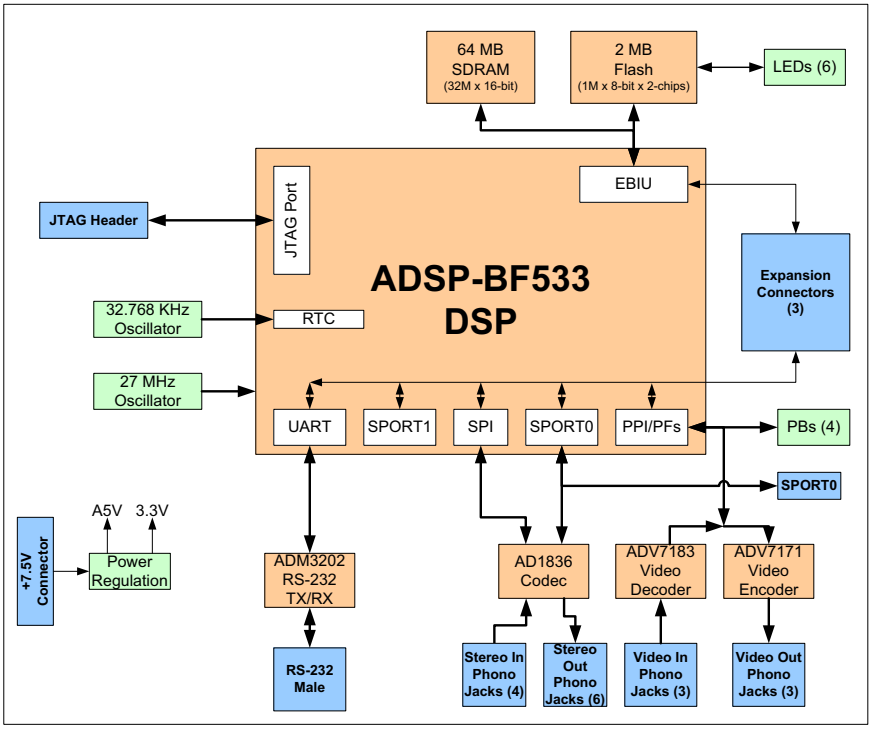

Figure 2-1. System Architecture

This EZ-KIT Lite has been designed to demonstrate the capabilities of the ADSP-BF533 Blackfin processor. The processor has an IO voltage of 3.3V. The core voltage is derived from this 3.3V supply and uses the internal regulator of the processor. The core voltage and the core clock rate can be set up on the fly by the processor. Refer to the *ADSP-BF533 Blackfin Processor Hardware Reference* for more information.

The default boot mode for the processor is flash boot. See "Boot Mode Switch (SW11)" on page 2-11 for information about changing the default.

External Bus Interface Unit

The external bus interface unit (EBIU) connects an external memory to the ADSP-BF533 processor. The EBIU includes a 16-bit wide data bus, an address bus, and a control bus. Both 16-bit and 8-bit access are supported. On the EZ-KIT Lite, the EBI unit connects to SDRAM and flash memory.

64 MB (32M x 16 bits) of SDRAM connect to the synchronous memory select 0 (~SMS0) pin. Refer to "SDRAM Interface" on page 1-9 for information about SDRAM configuration. Note that SDRAM's clock is the processor's clock out (CLK OUT), which frequency should not exceed 133 MHz.

Two flash memory devices connect to the asynchronous memory select signals, ~AMS2 through ~AMS0. The devices provide a total of 2 Mbytes of primary flash memory, 128 Kbytes of secondary flash memory, and 64 Kbytes of SRAM. The processor can use this memory for both booting and storing information during normal operation. Refer to "Flash Memory" on page 1-10 for details.

All of the address, data, and control signals are available externally via the extender connectors (J1-3). The pinout of the connectors can be found in "ADSP-BF533 EZ-KIT Lite Schematic" on page B-1.

SPORT Audio Interface

The SPORT0 connects to the AD1836 audio codec and the expansion interface. The AD1836 codec uses both the primary and secondary data transmit and receive pins to input and output data from the audio inputs and outputs.

The SPORT1 connects to the SPORT connector (P3) and the expansion interface.

The pinout of the SPORT connector and the expansion interface connectors can be found in "ADSP-BF533 EZ-KIT Lite Schematic" on page B-1.

SPI Interface

The serial peripheral interface (SPI) of the ADSP-BF533 processor connects to the AD1836 audio codec and the expansion interface. The SPI connection to the AD1836 is used to access the control registers of the device. The PF4 flag of the processor is used as the devices select for the SPI port.

The SPI signals are available on the expansion interface and on the SPI connector (P6). The interface pinout can be found in "ADSP-BF533 EZ-KIT Lite Schematic" on page B-1.

Programmable Flags

The processor has 15 programmable flag pins (PFs). The pins are multi-functional and depend on the processor setup. Table 2-1 is a summary of the programmable flag pins used on the EZ-KIT Lite.

Table 2-1. Programmable Flag Connections

Processor PF Pin	Other Processor Function	EZ-KIT Lite Function
PF0	SPI Slave Select	Serial clock for programming ADV7171 and ADV7183
PF1	SPI Select 1, Timer CLK	Serial data for programming ADV7171 and ADV7183
PF2	SPI Select 2	ADV7183 ~OE signal
PF3	SPI Select 3, FS3	ADV7183 FIELD pin. See "Video Configuration Switch (SW3)" on page 2-11.

Table 2-1. Programmable Flag Connections (Cont'd)

Processor PF Pin	Other Processor Function	EZ-KIT Lite Function
PF4	SPI Select 4, PPI15	AD1836 SPI select
PF5	SPI Select 5, PPI14	
PF6	SPI Select 6, PPI13	
PF7	SPI Select 7, PPI12	
PF8	PPI11	Push button (SW4). See "LEDs and Push Buttons" on page 1-15 and "Push Button Enable Switch (SW9)" on page 2-12 for information on how to disable the push button.
PF9	PPI10	Push button (SW5). See "LEDs and Push Buttons" on page 1-15 and "Push Button Enable Switch (SW9)" on page 2-12 for information on how to disable the push button.
PF10	PPI9	Push button (SW6). See "LEDs and Push Buttons" on page 1-15 and "Push Button Enable Switch (SW9)" on page 2-12 for information on how to disable the push button.
PF11	PPI8	Push button (SW7). See "LEDs and Push Buttons" on page 1-15 and "Push Button Enable Switch (SW9)" on page 2-12 for information on how to disable the push button.
PF12	PPI7	ADV7171 and ADV7183 data (MSB)
PF13	PPI6	ADV7171 and ADV7183 data
PF14	PPI5	ADV7171 and ADV7183 data
PF15	PPI4	ADV7171 and ADV7183 data

PPI Interface

The parallel peripheral interface (PPI) of the ADSP-BF533 processor is a half-duplex, bi-directional port that can accommodate up to 16 bits of data. The interface has a dedicated input clock (27 MHz), three multiplexed frame sync signals, and four bits of dedicated data. The remaining

data bits come from the re-configured programmable flag pins. For information about the PFs multiplexed with the PPI pins, see "Programmable Flags" on page 2-4. For information about the processor's PPI interface, refer to the *ADSP-BF533 Blackfin Processor Hardware Reference*.

Table 2-2 is a summary of the PPI pins used on the EZ-KIT Lite.

Table 2-2. PPI Connections

Processor PPI Pin	Other Processor Function	EZ-KIT Lite Function
PPI7	PF12	ADV7171 and ADV7183 data (MSB)
PPI6	PF13	ADV7171 and ADV7183 data
PPI5	PF14	ADV7171 and ADV7183 data
PPI4	PF15	ADV7171 and ADV7183 data
PPI3		ADV7171 and ADV7183 data
PPI2		ADV7171 and ADV7183 data
PPI1		ADV7171 and ADV7183 data
PPI0		ADV7171 and ADV7183 data
PF3	FS3	ADV7183 FIELD pin. For more information, see "Video Configuration Switch (SW3)" on page 2-11.
TMR1	PPI_HSYNC	ADV7171 and ADV7183 HSYNC. For more information, see "Video Configuration Switch (SW3)" on page 2-11.
TMR2	PPI_FSYNC	ADV7171 and ADV7183 VSYNC. For more information, see "Video Configuration Switch (SW3)" on page 2-11.
PPI_CLK		Input from either the ADV7183 output clock or the same 27 MHz oscillator driving the processor. For more information, see "Video Interface" on page 1-16.

The ADSP-BF533 EZ-KIT Lite board employs 8-bit PPI interface for video output and video input.

Video Output Mode

In the video output mode, the PPI interface is configured as output and connects to the on-board video encoder device, ADV7171. The ADV7171 encoder generates three analog video channels on DAC B, DAC C, and DAC D outputs. The PPI data connects to P7-0 of the encoder's pixel inputs. The encoder's PPI input clock runs at 27 MHz, in phase with CLK IN of the processor.

The encoder's synchronization signals, HSYNC and VSYNC, can be configured as inputs or outputs. Video blanking control signal is at level 1. The HSYNC and VSYNC signals can connect the multiplexed sync pins of the processor and the on-board ADV7183 video decoder via the SW3 switch, as described in "Video Configuration Switch (SW3)" on page 2-11.

Video Input Mode

In the video input mode, the PPI interface is configured as input and connects to the on-board video decoder device, ADV7183. The ADV7183 decoder receives three analog video channels on AIN1, AIN4, and AIN5 input. The decoder's pixel data outputs P15-8 drive the PPI data (PPI3-0 and PF15-12). The decoder's 27 MHz pixel clock output can be selected to drive PPI clock, as shown in Table 1-7 on page 1-13.

Synchronization outputs of the decoder, HS/HACTIVE, VS/VACTIVE, and FIELD, can connect the multiplexed sync pins of the ADSP-BF533 processor and the ADV7171 on-board video encoder via the SW3 DIP switch, as described in "Video Configuration Switch (SW3)" on page 2-11.

UART Port

The universal asynchronous receiver/transmitter (UART) port of the processor connects to the ADM3202 RS-232 line driver, as well as to the expansion interface. The RS-232 line driver connects to the DB9 male connector, providing an interface to a personal computer and other serial devices.

Expansion Interface

The expansion interface consists of three 90-pin connectors. Table 2-3 on page 2-8 shows the interfaces each connector provides. For the exact pinout of the connectors, refer to "ADSP-BF533 EZ-KIT Lite Schematic" on page B-1. The mechanical dimensions of the connectors can be found on page 2-17.

Table 2-3. Expansion Connector Interfaces

Connector	Interfaces
J1	5V, GND, address, data, PPI
J2	3.3V, GND, SPI, NMI, TMR2-0, SPORT0, SPORT1, PF15-0, EBIU control signals
J3	5V, 3.3V, GND, UART, flash IO, reset, video control signals

Limits to the current and to the interface speed must be taken into consideration when using the expansion interface. The maximum current limit is dependent on the capabilities of the used regulator. Additional circuitry can also add extra loading to signals, decreasing their maximum effective speed.

Analog Devices does not support and is not responsible for the effects of additional circuitry.

JTAG Emulation Port

The JTAG emulation port allows an emulator to access the processor's internal and external memory through a 6-pin interface. The JTAG emulation port of the processor also connects to the USB debugging interface. When an emulator connects to the board at ZP4, the USB debugging interface is disabled. See "JTAG (ZP4)" on page 2-21 for more information about the JTAG connector.

To learn more about available emulators, contact Analog Devices (see "Product Information").

Jumper and Switch Settings

This section describes the operation of the jumpers and switches. The jumper and switch locations are shown in Figure 2-2.

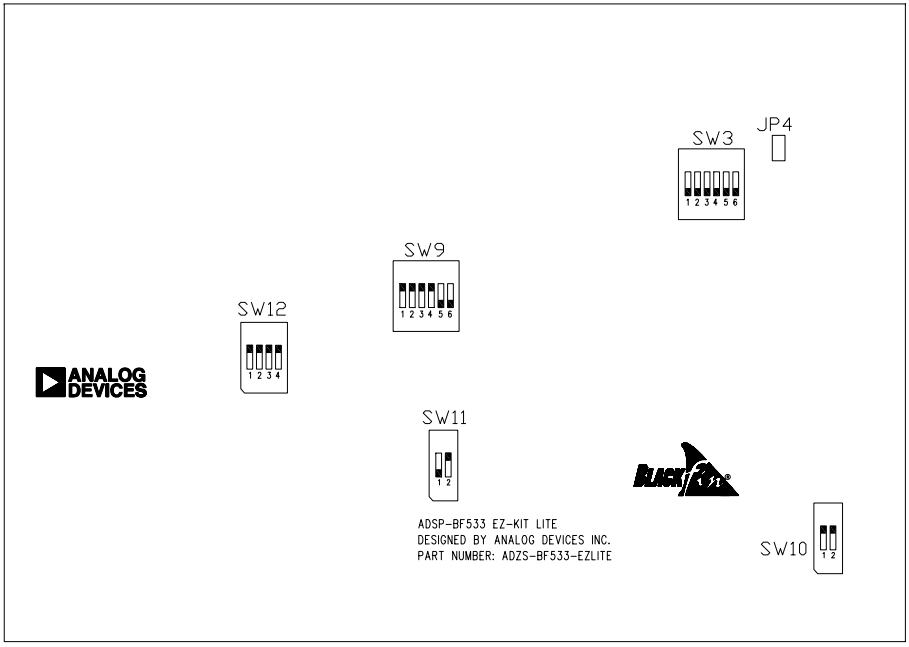

Figure 2-2. Jumper and Switch Locations

UART Loop Jumper (JP4)

The UART loop jumper (JP4) allows the loop back connection of transmit and receive signals. The default is the OFF position.

Boot Mode Switch (SW11)

Positions 1 and 2 of SW11 set the boot mode of the processor as described in Table 2-4.

Table 2-4. Boot Mode Switch (SW11)

Position 1 BMODE0	Position 2 BMODE1	Boot Mode
ON	ON	16-bit external memory
OFF [1]	**ON**	**Flash memory**
ON	OFF	SPI host slave
OFF	OFF	SPI EEPROM

1 Default settings

Test DIP Switches (SW1 and SW2)

Two DIP switches (SW1 and SW2) are located on the bottom of the board. The switches are used only for testing and should be in the OFF position.

Video Configuration Switch (SW3)

The video configuration switch (SW3) controls how some video signals from the ADV7183 video decoder and ADV7171 video encoder are routed to the processor's PPI. The switch also determines if the PF2 pin controls the ~OE signal of the ADV7183 video decoder outputs. Table 2-5 shows which processor's signals connect to the encoder and decoder in the default (ON) position.

Positions 1 thorough 5 of SW3 determine how and if the VSYNC, HSYNC, and FIELD control signals are routed to the processor's PPI. In standard configuration of the encoder and decoder, this is not necessary because the processor is capable of reading the control information embedded in the data stream.

Table 2-5. Video Configuration Switch (SW3)

Switch Position (Default)	Processor Signal	Video Signal
1 (OFF)	TMR1 (HSYNC)	HSYNC (ADV7171)
2 (OFF)	TMR1 (HSYNC)	HS (ADV7183)
3 (OFF)	TMR2 (VSYNC)	VS (ADV7183)
4 (OFF)	TMR2 (VSYNC)	VSYNC (ADV7171)
5 (OFF)	PF3 (FIELD)	FIELD (ADV7183)
6 (ON)	PF2	~OE (ADV7183)

Position 6 of SW3 determines whether PF2 connects to the ~OE signal of the ADV7183. When the switch is OFF, PF2 can be used for other operations, and the decoder output enable is held high with a pull-up resistor.

Push Button Enable Switch (SW9)

The push button enable (SW9) switch positions 1 through 4 disconnect the drivers associated with the push buttons from the PF pins of the processor. Positions 5 and 6 are used to connect the transmit and receive frame syncs and clocks of SPORT0. This is important when the AD1836 audio codec and the processor are communicating in I^2S mode. Table 2-6 shows which PF is driven when the switch is in the default (ON) position.

Table 2-6. Push Button Enable Switch (SW9)

Switch Position	Default Setting	Pin #	Signal (Side 1)	Pin #	Signal (Side 2)
1	ON	1	SW4	12	PF8
2	ON	2	SW5	11	PF9
3	ON	3	SW6	10	PF10
4	ON	4	SW7	9	PF11
5	OFF	5	TFS0	8	RFS0
6	OFF	6	RSCLK0	7	TSCLK0

SPIS1/SPISS Select Switch (SW10)

The SPIS1/SPISS select switch (SW10) disconnects the SPIS1 and SPISS signals from the board, making them available on the SPI connector (P6). The default is the ON position.

SPORT0 Switch (SW12)

When is set to OFF, SW12 disconnects SPORT0 from the audio codec. The switch is used when SPORT0 signals are desired at the expansion interface. The default is the ON position.

LEDs and Push Buttons

This section describes the functionality of the LEDs and push buttons. Figure 2-3 shows the locations of the LEDs and push buttons.

Programmable Flag Push Buttons (SW4–7)

Four push buttons, SW4-7, are provided for general-purpose user input. The buttons connect to the processor's programmable flag pins PF8-11. The push buttons are active high and, when pressed, send a high (1) to the processor. Refer to "LEDs and Push Buttons" on page 1-15 for information on PFs programming. The push button enable switch (SW9) is capable of disconnecting the push buttons from the PFs (refer to "Push Button Enable Switch (SW9)" on page 2-12 for more information). The programmable flag pins and their corresponding push buttons are shown in Table 2-7.

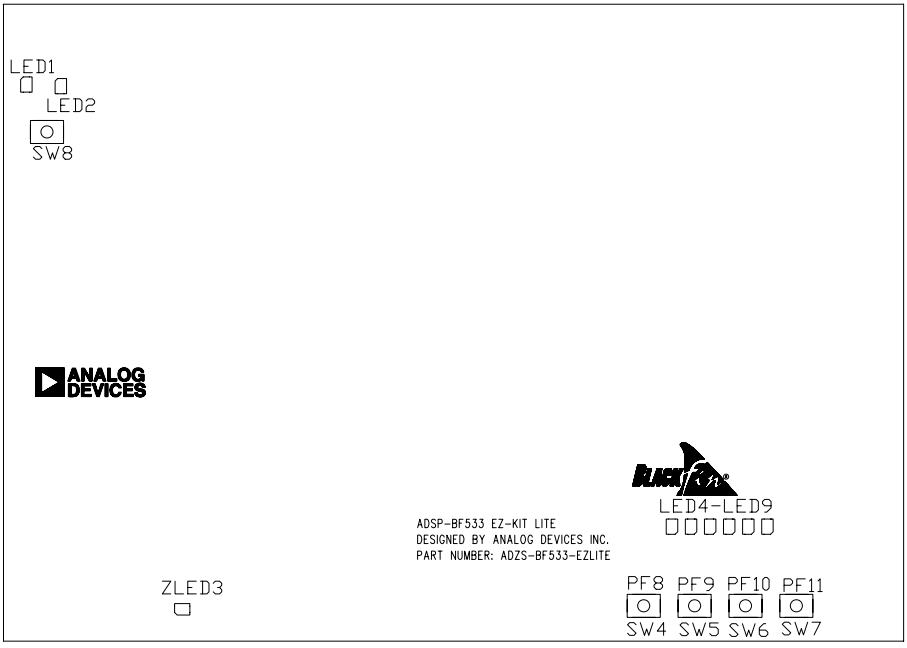

Figure 2-3. LED and Push Button Locations

Table 2-7. Programmable Flag Switches

Processor Programmable Flag Pin	Push Button Reference Designator
PF8	SW4
PF9	SW5
PF10	SW6
PF11	SW7

Reset Push Button (SW8)

The RESET push button resets all of the ICs on the board. One exception is the USB interface chip (U34). The chip is not being reset when the push button is pressed after the USB cable has been plugged in, and communication has been correctly initialized with the PC. After USB communication has been initialized, the only way to reset the USB is by powering down the board.

Power LED (LED1)

When LED1 is lit (green), it indicates that power is being supplied to the board properly.

Reset LED (LED2)

When LED2 is lit, it indicates that the master reset of all the major ICs is active.

User LEDs (LED4–9)

Six LEDs connect to six general-purpose IO pins of the flash memory (U5). The LEDs are active high and are lit by writing a 1 to the correct memory address in the flash memory. Refer to "LEDs and Push Buttons" on page 1-15 for information on how to use the flash when programming the LEDs.

Table 2-8. User LEDs

LED Reference Designator	Flash Port Name
LED4	PB0
LED5	PB1
LED6	PB2

Table 2-8. User LEDs (Cont'd)

LED Reference Designator	Flash Port Name
LED7	PB3
LED8	PB4
LED9	PB5

USB Monitor LED (ZLED3)

The USB monitor LED (ZLED3) indicates that USB communication has been initialized successfully and you can connect to the processor using a VisualDSP++ EZ-KIT Lite session. This should take approximately 15 seconds. If the LED does not light, try cycling power on the board and/or reinstalling the USB driver.

When VisualDSP++ is actively communicating with the EZ-KIT Lite target board, the LED can flicker, indicating communications handshake.

Connectors

This section describes the connector functionality and provides information about mating connectors. The connector locations are shown in Figure 2-4.

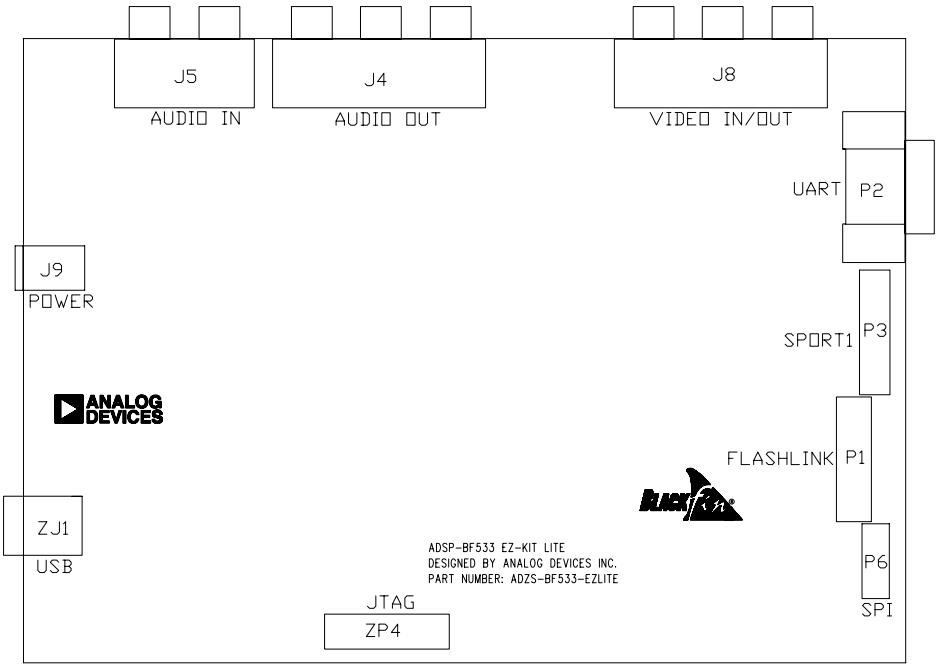

Figure 2-4. Connector Locations

Expansion Interface (J1–3)

Three board-to-board connector footprints provide signals for most of the processor's peripheral interfaces. The connectors are located at the bottom of the board. For more information about the expansion interface, see "Expansion Interface" on page 2-8. For the availability and pricing of the `J1`, `J2`, and `J3` connectors, contact Samtec.

Part Description	Manufacturer	Part Number
90-position 0.05” spacing, SMT (J1, J2, J3)	SAMTEC	SFC-145-T2-F-D-A
Mating Connectors		
90-position 0.05” spacing (through hole)	SAMTEC	TFM-145-x1 series
90-position 0.05” spacing (surface mount)	SAMTEC	TFM-145-x2 series
90-position 0.05” spacing (low cost)	SAMTEC	TFC-145 series

Audio (J4 and J5)

Part Description	Manufacturer	Part Number
2x2 RCA jacks (J5)	SWITCHCRAFT	PJRAS2X2S01
3x2 RCA jacks (J4)	SWITCHCRAFT	PJRAS3X2S01
Mating Connector		
Two channel RCA interconnect cable	MONSTER CABLE	BI100-1M

Video (J8)

Part Description	Manufacturer	Part Number
3x2 RCA jacks (J8)	SWITCHCRAFT	PJRAS3X2S01

Power (J9)

The power connector provides all of the power necessary to operate the EZ-KIT Lite board. The following table shows the power connector pinout.

Part Description	Manufacturer	Part Number
2.5 mm power jack (J9)	SWITCHCRAFT	RAPC712
	DIGI-KEY	RAPC712X-ND
Mating Power Supply (shipped with EZ-KIT Lite)		
7.5V power supply	GLOBTEK	TR9CC2000LCP-Y

The power connector supplies DC power to the EZ-KIT Lite board. Table 2-9 shows the power supply specifications.

Table 2-9. Power Supply Specifications

Terminal	Connection
Center pin	+7.5 VDC@2amps
Outer ring	GND

FlashLINK (P1)

The FlashLINK connector allows you to configure and program the STMicroelectronics DSM2150 flash/PLD chip. See "Configuring Flash Memory" on page 1-14 for more information about the FlashLINK connector.

Part Description	Manufacturer	Part Number
Right-angle 7X2 shrouded 0.1" spacing (P1)	FCI	68737-414HLF
Mating Assembly		
FlashLINK JTAG programmer	ST MICRO	FL-101B

RS-232 (P2)

The RS-232 compatible connector is described in Table 2-10.

Table 2-10. RS-232 Connector

Part Description	Manufacturer	Part Number
DB9, male, right angle (P2)	TYCO	5747250-4
Mating Assembly		
2m female-to-female cable	DIGI-KEY	AE1016-ND

SPORT1 (P3)

The SPORT1 connector is linked to a 20-pin connector. The connector's pinout can be found in "ADSP-BF533 EZ-KIT Lite Schematic" on page B-1. For the flash (U5) connector pricing and availability, contact AMP.

Part Description	Manufacturer	Part Number
20-pin IDC header	FCI	68737-420HLF
Mating Connector		
IDC socket	DIGI-KEY	S4210-ND

JTAG (ZP4)

The JTAG header is the connecting point for a JTAG in-circuit emulator pod. When an emulator connects to the JTAG header, the USB debug interface is disabled.

Pin 3 is missing to provide keying. Pin 3 in the mating connector should have a plug.

When using an emulator with the EZ-KIT Lite board, follow the connection instructions provided with the emulator.

Part Description	Manufacturer	Part Number
14-pin IDC header	FCI	68737-414HLF

SPI (P6)

The SPI connector is linked to a 12-pin connector. The connector's pinout can be found in "ADSP-BF533 EZ-KIT Lite Schematic" on page B-1.

Part Description	Manufacturer	Part Number
IDC header	FCI	68737-412HLF
Mating Assembly		
IDC socket	DIGI-KEY	S4207-ND

A ADSP-BF533 EZ-KIT LITE BILL OF MATERIALS

The bill of materials corresponds to "ADSP-BF533 EZ-KIT Lite Schematic" on page B-1.

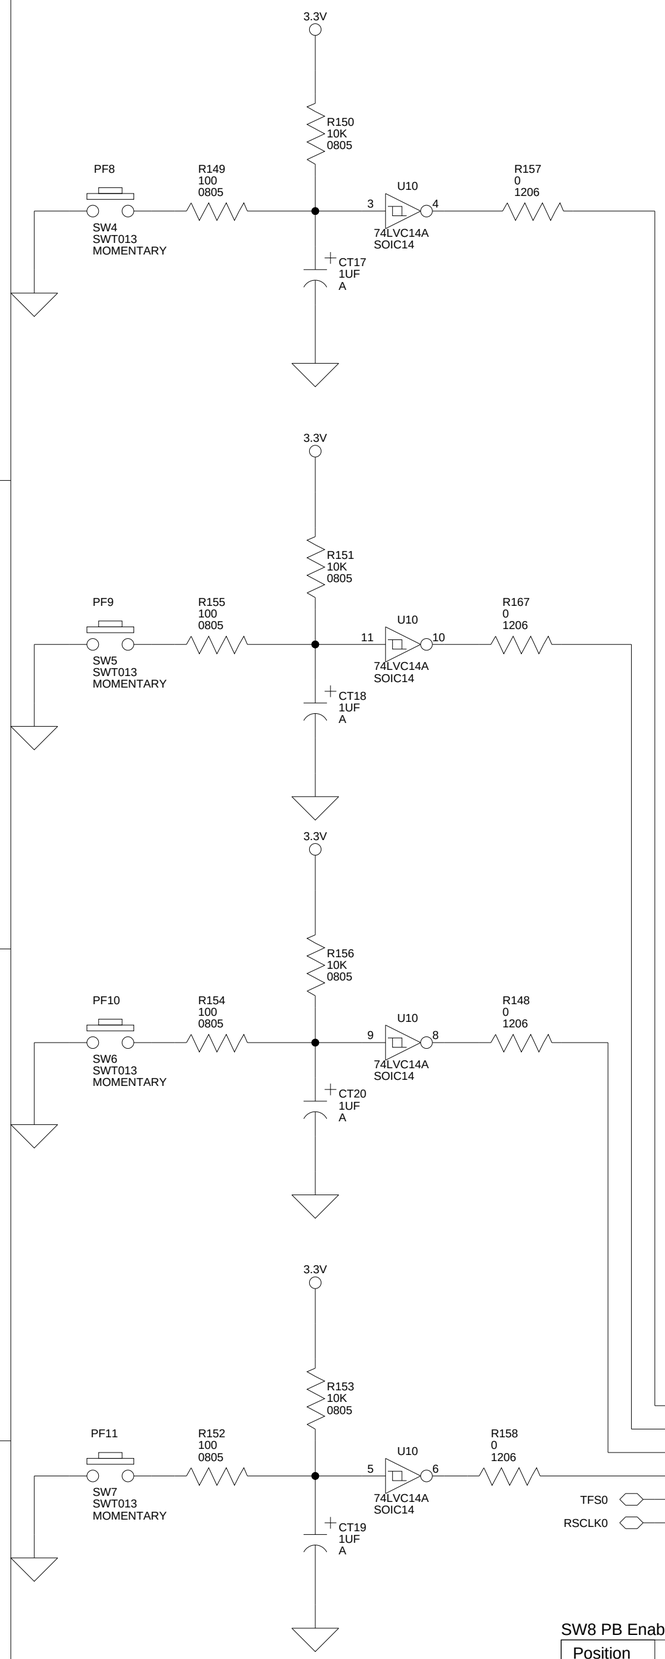
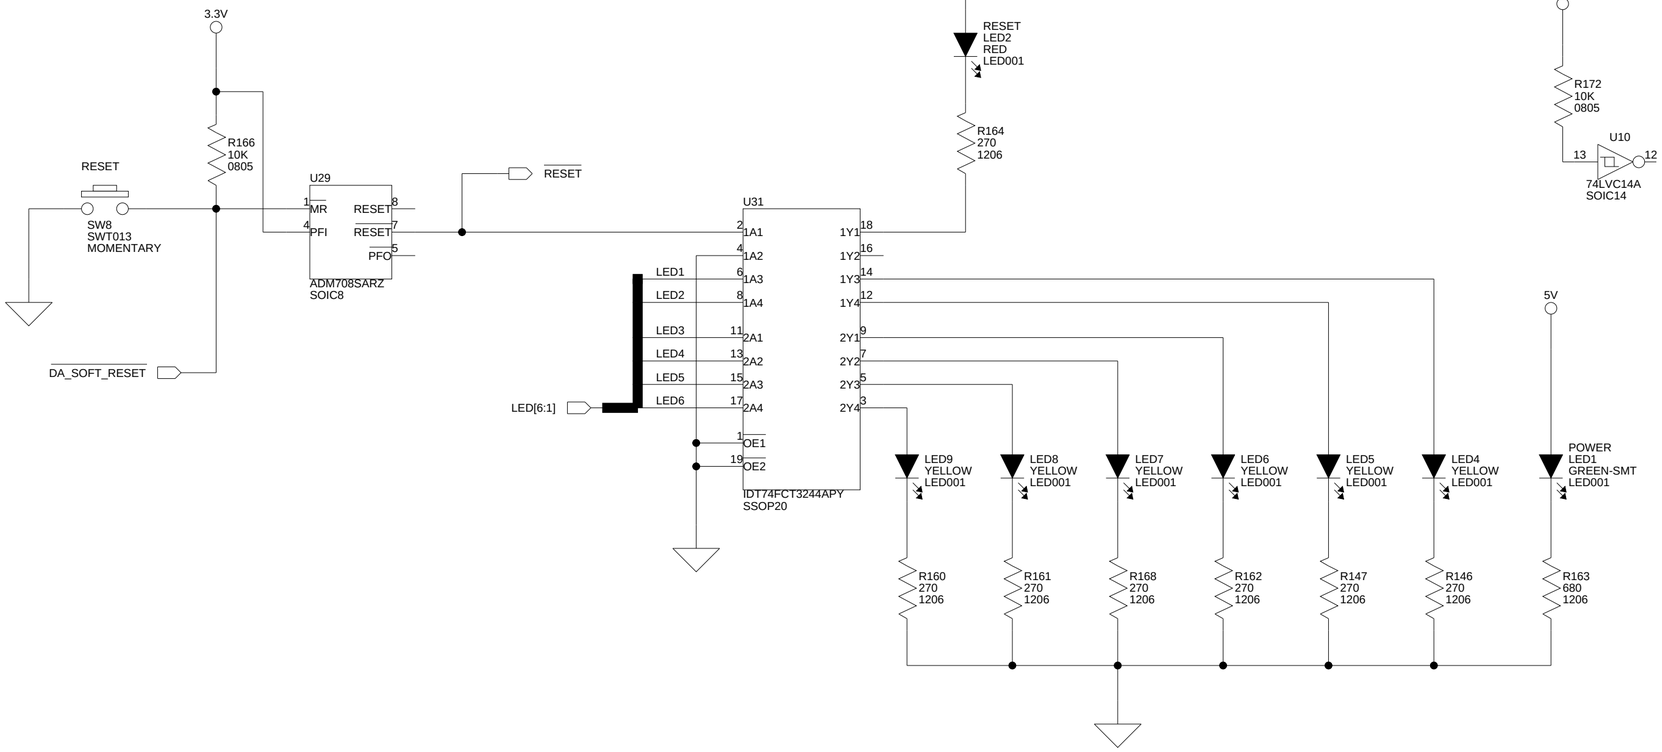
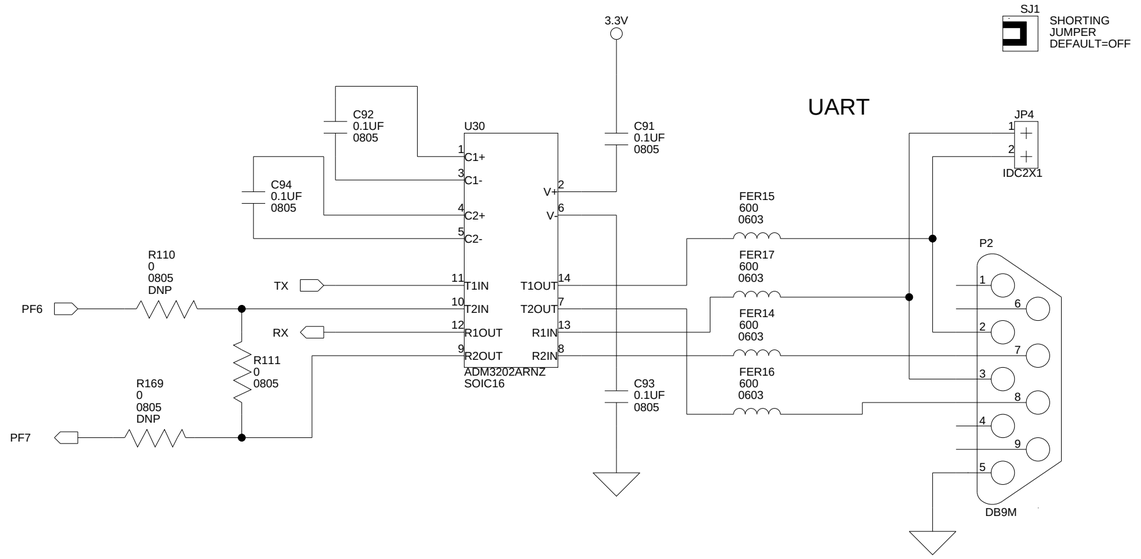
Date 5-24-2007_14:20		**Sheet** 8 **of** 12	







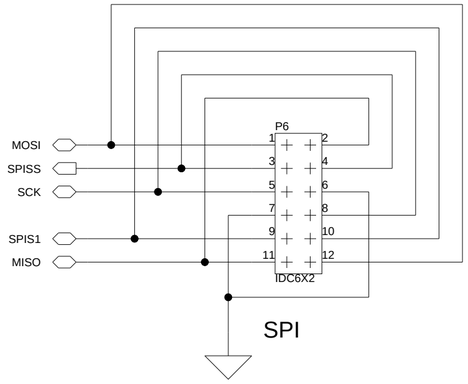
SW8 PB Enable Switch

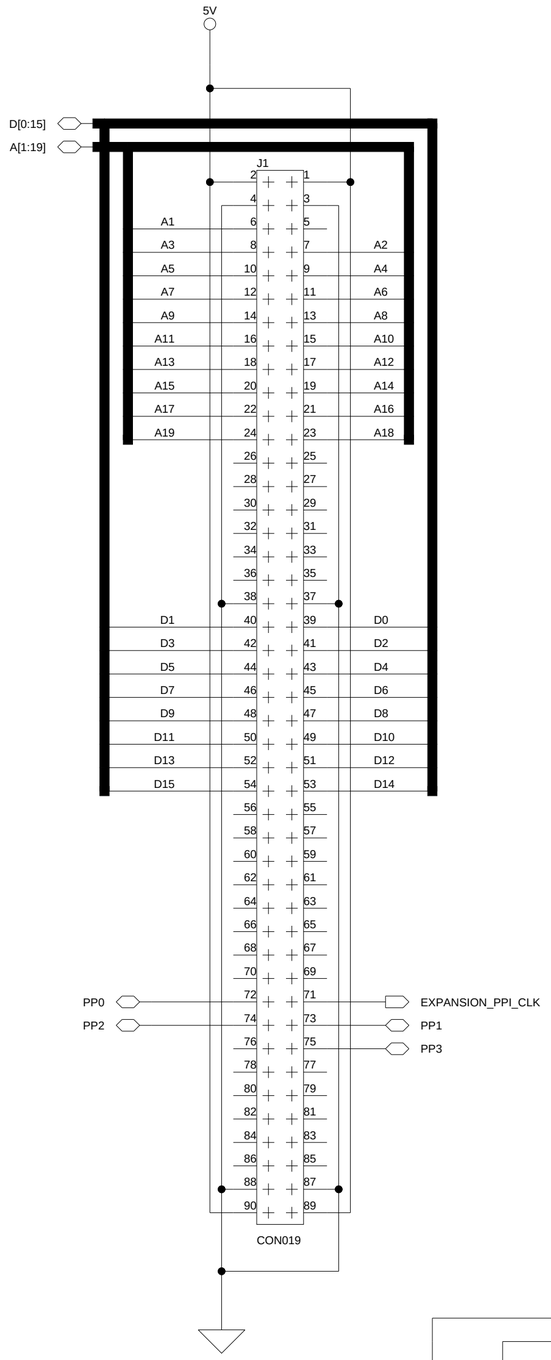
Position	Function
1-4	Connects the push buttons to the Programmable Flags of the DSP Useful if using the PFs for another purpose.
5,6	Connects SPORT0 frame sync and clock together external to the DSP Required when AD1836 is in I2S mode

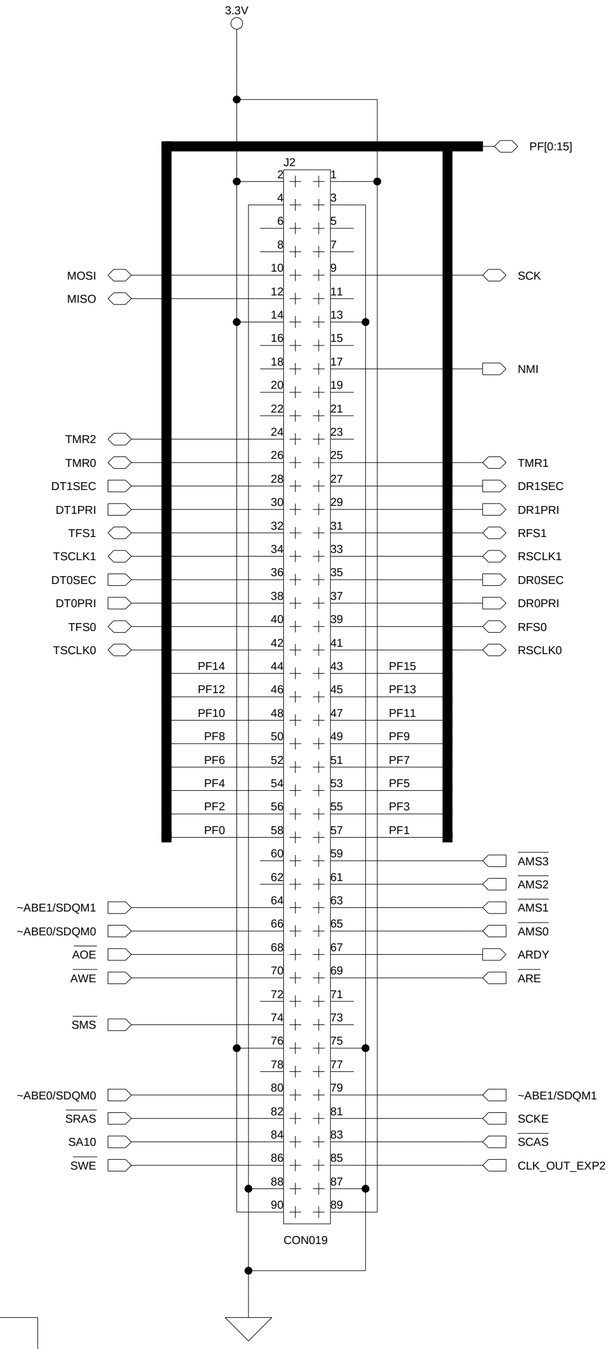
ANALOG DEVICES
20 Cotton Road
Nashua, NH 03063
PH: 1-800-ANALOGD

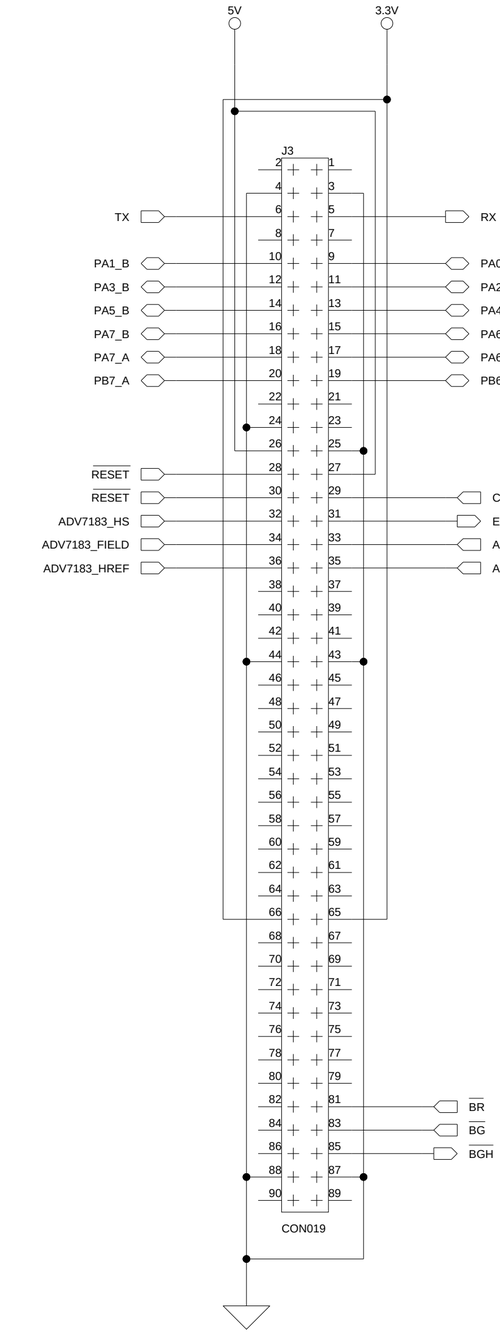
Title	ADSP-BF533 EZ-KIT LITE IO/RESET/UART		
Size C	**Board No.** A0167-2001		**Rev** 2.2
Date 5-24-2007_14:20		**Sheet** 9 **of** 12	

EXPANSION INTERFACE (TYPE B)









All USB interface circuitry is considered proprietary and has been omitted from this schematic.

When designing your JTAG interface please refer to the Engineer to Engineer Note EE-68 which can be found at http://www.analog.com

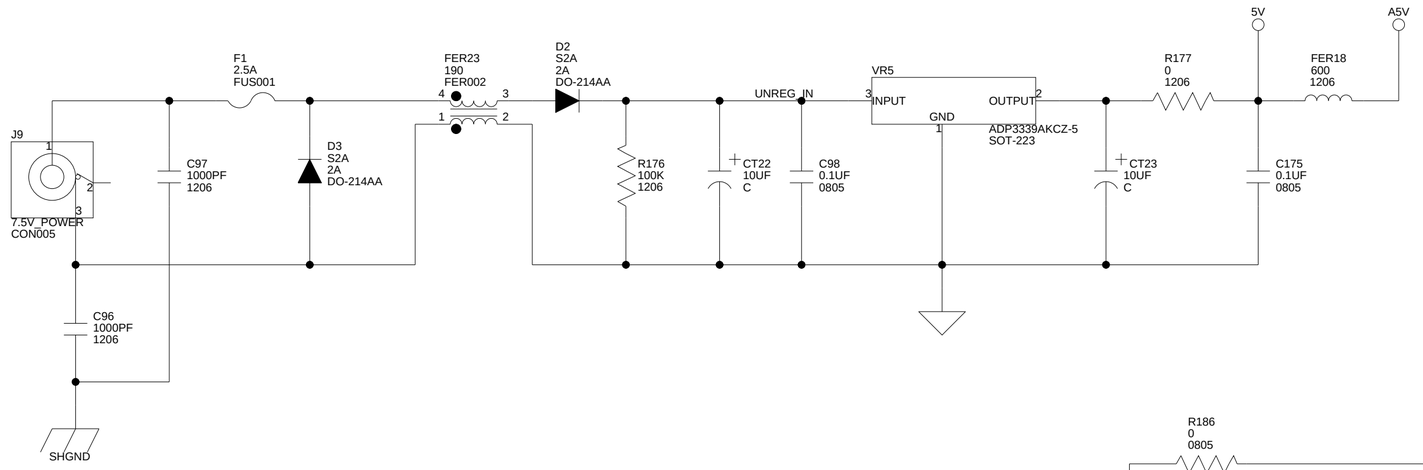
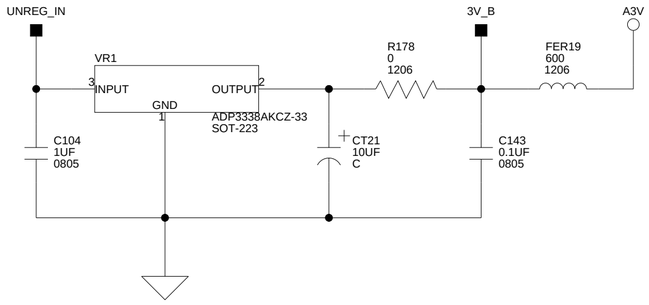
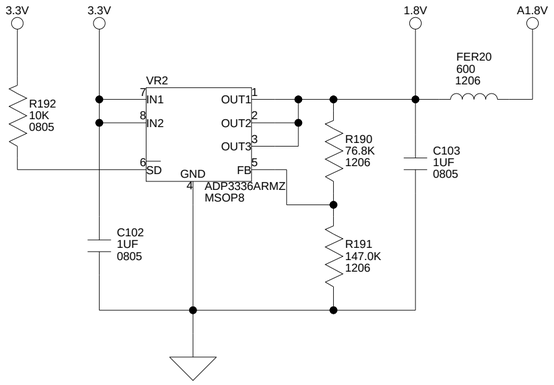
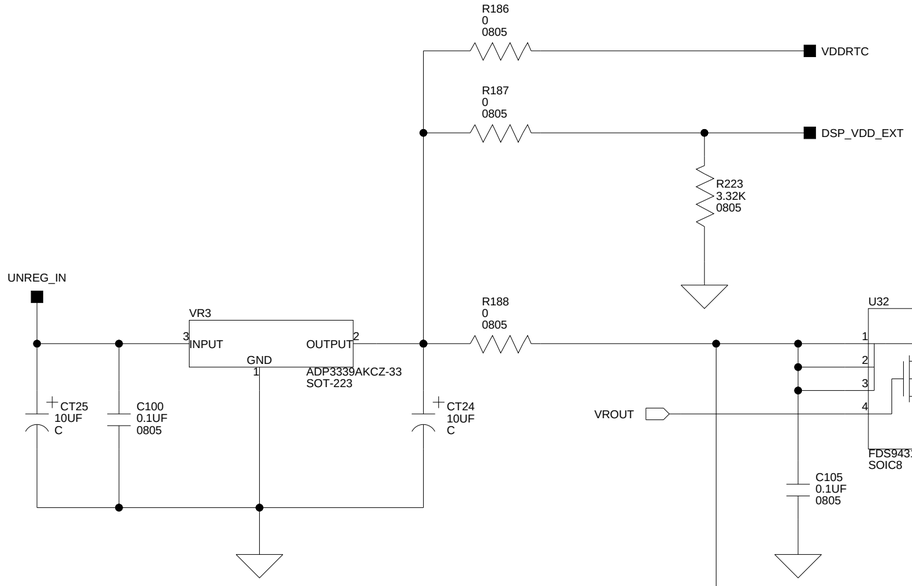
Title	ADSP-BF533 EZ-KIT LITE CONNECTORS		
Size C	Board No. A0167-2001		Rev 2.2
Date 5-24-2007_14:20		Sheet 10 of 12	









SW10: Core Voltage Source Select
DEFAULT: Not Populated

Position	Function
1 and 2	DSP_VDD_INT = DSP Internal Voltage Regulation
2 and 3	DSP_VDD_INT = 1.4V Fixed

Note: For boards without a 750MHz processor this jumper will not be populated and the DSP_VDD_INT will be hard-wired with R222 to use the processor internal regulator.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
