

Revision History**AS4C32M16D1 - 60-Ball, 8x13x1.2 mm (max) TFBGA PACKAGE**

Revision	Details	Date
Rev 1.0	Preliminary datasheet	August 2014

32M x 16 bit DDR Synchronous DRAM (SDRAM)

TFBGA option - Advanced (Rev. 1.0, Aug. /2014)

Features

- Fast clock rate: 200MHz
- Differential Clock CK & \overline{CK}
- Bi-directional DQS
- DLL enable/disable by EMRS
- Fully synchronous operation
- Internal pipeline architecture
- Four internal banks, 8M x 16-bit for each bank
- Programmable Mode and Extended Mode registers
 - CAS Latency: 2, 2.5, 3
 - Burst length: 2, 4, 8
 - Burst Type: Sequential & Interleaved
- Individual bytes write mask control
- DM Write Latency = 0
- Auto Refresh and Self Refresh
- 8192 refresh cycles / 64ms
- Precharge & active power down
- Power supplies: V_{DD} & $V_{DDQ} = 2.5V \pm 0.2V$
- Operating temperature range
 - Commercial (0° ~ 70°C)
 - Industrial (-40° ~ 85°C)
- Interface: SSTL_2 I/O Interface
- Package: 60-Ball, 8x13x1.2 mm (max) TFBGA
 - Pb free and Halogen Free

All parts are ROHS compliant

Overview

The AS4C32M16D1 is a high-speed CMOS double data rate synchronous DRAM containing 512 Mbits. It is internally configured as a quad 8M x 16 DRAM with a synchronous interface (all signals are registered on the positive edge of the clock signal, CK). Data outputs occur at both rising edges of CK and \overline{CK} . Read and write accesses to the SDRAM are burst oriented; accesses start at a selected location and continue for a programmed number of locations in a programmed sequence. Accesses begin with the registration of a BankActivate command which is then followed by a Read or Write command. The device provides programmable Read or Write burst lengths of 2, 4, or 8. An auto precharge function may be enabled to provide a self-timed row precharge that is initiated at the end of the burst sequence. The refresh functions, either Auto or Self Refresh are easy to use. In addition, 512Mb DDR features programmable DLL option. By having a programmable mode register and extended mode register, the system can choose the most suitable modes to maximize its performance. These devices are well suited for applications requiring high memory bandwidth; result in a device particularly well suited to high performance main memory and graphics applications.

Table 1. Ordering Information

Part Number	Clock	Data Rate	Package	Temperature	Temp Range
AS4C32M16D1-5BCN	200MHz	400Mbps/pin	60 ball TFBGA	Commercial	0 ~ 70°C
AS4C32M16D1-5BIN	200MHz	400Mbps/pin	60 ball TFBGA	Industrial	-40 ~ 85°C

B: indicates TSOP II package
 C: indicates Commercial temp.
 I: indicates Industrial temp.
 N: indicates lead free ROHS

Pin Descriptions
Table 2. Pin Details

Symbol	Type	Description
CK, \overline{CK}	Input	Differential Clock: CK and \overline{CK} are differential clock inputs. All address and control input signals are sampled on the crossing of the positive edge of CK and negative edge of \overline{CK} . Input and output data is referenced to the crossing of CK and \overline{CK} (both directions of the crossing)
CKE	Input	Clock Enable: CKE activates (HIGH) and deactivates (LOW) the CK signal. If CKE goes low synchronously with clock, the internal clock is suspended from the next clock cycle and the state of output and burst address is frozen as long as the CKE remains low. When all banks are in the idle state, deactivating the clock controls the entry to the Power Down and Self Refresh modes.
BA0, BA1	Input	Bank Activate: BA0 and BA1 define to which bank the BankActivate, Read, Write, or BankPrecharge command is being applied.
A0-A12	Input	Address Inputs: A0-A12 are sampled during the BankActivate command (row address A0-A12) and Read/Write command (column address A0-A9 with A10 defining Auto Precharge).
\overline{CS}	Input	Chip Select: \overline{CS} enables (sampled LOW) and disables (sampled HIGH) the command decoder. All commands are masked when \overline{CS} is sampled HIGH. \overline{CS} provides for external bank selection on systems with multiple banks. It is considered part of the command code.
\overline{RAS}	Input	Row Address Strobe: The \overline{RAS} signal defines the operation commands in conjunction with the \overline{CAS} and \overline{WE} signals and is latched at the positive edges of CK. When \overline{RAS} and \overline{CS} are asserted "LOW" and \overline{CAS} is asserted "HIGH," either the BankActivate command or the Precharge command is selected by the \overline{WE} signal. When the \overline{WE} is asserted "HIGH," the BankActivate command is selected and the bank designated by BA is turned on to the active state. When the \overline{WE} is asserted "LOW," the Precharge command is selected and the bank designated by BA is switched to the idle state after the precharge operation.
\overline{CAS}	Input	Column Address Strobe: The \overline{CAS} signal defines the operation commands in conjunction with the \overline{RAS} and \overline{WE} signals and is latched at the positive edges of CK. When \overline{RAS} is held "HIGH" and \overline{CS} is asserted "LOW," the column access is started by asserting \overline{CAS} "LOW." Then, the Read or Write command is selected by asserting \overline{WE} "HIGH" or "LOW".
\overline{WE}	Input	Write Enable: The \overline{WE} signal defines the operation commands in conjunction with the \overline{RAS} and \overline{CAS} signals and is latched at the positive edges of CK. The \overline{WE} input is used to select the BankActivate or Precharge command and Read or Write command.
LDQS, UDQS	Input / Output	Bidirectional Data Strobe: Specifies timing for Input and Output data. Read Data Strobe is edge triggered. Write Data Strobe provides a setup and hold time for data and DQM. LDQS is for DQ0~7, UDQS is for DQ8~15.
LDM, UDM	Input	Data Input Mask: Input data is masked when DM is sampled HIGH during a write cycle. LDM masks DQ0-DQ7, UDM masks DQ8-DQ15.
DQ0 - DQ15	Input / Output	Data I/O: The DQ0-DQ15 input and output data are synchronized with positive and negative edges of LDQS and UDQS. The I/Os are byte-maskable during Writes.
V _{DD}	Supply	Power Supply: 2.5V ± 0.2V.

V _{SS}	Supply	Ground
V _{DDQ}	Supply	DQ Power: 2.5V ± 0.2V. Provide isolated power to DQs for improved noise immunity.
V _{SSQ}	Supply	DQ Ground: Provide isolated ground to DQs for improved noise immunity.
V _{REF}	Supply	Reference Voltage for Inputs: +0.5*V _{DDQ}
NC	-	No Connect: These pins should be left unconnected.

Operation Mode

Table 3 shows the truth table for the operation commands.

Table 3. Truth Table (Note (1), (2))

Command	State	CKE _{n-1}	CKE _n	DM	BA _{0,1}	A10	A _{0-9, 11-12}	CS	RAS	CAS	WE
BankActivate	Idle ⁽³⁾	H	X	X	V	Row address		L	L	H	H
BankPrecharge	Any	H	X	X	V	L	X	L	L	H	L
Precharge All	Any	H	X	X	X	H	X	L	L	H	L

Data Input Mask Disable	Active	H	X	L	X	X	X	X	X	X	X
Data Input Mask Enable ⁽⁵⁾	Active	H	X	H	X	X	X	X	X	X	X

- Note:**
1. V=Valid data, X=Don't Care, L=Low level, H=High level
 2. CKE_n signal is input level when commands are provided.
CKE_{n-1} signal is input level one clock cycle before the commands are provided.
 3. These are states of bank designated by BA signal.
 4. Device state is 2, 4, and 8 burst operation.
 5. LDM and UDM can be enabled respectively.

Mode Register Set (MRS)

The Mode Register stores the data for controlling various operating modes of a DDR SDRAM. It programs CAS Latency, Burst Type, and Burst Length to make the DDR SDRAM useful for a variety of applications. The default value of the Mode Register is not defined; therefore the Mode Register must be written by the user. Values stored in the register will be retained until the register is reprogrammed. The Mode Register is written by asserting Low on \overline{CS} , \overline{RAS} , \overline{CAS} , \overline{WE} , BA1 and BA0 (the device should have all banks idle with no bursts in progress prior to writing into the mode register, and CKE should be High). The state of address pins A0~A12 and BA0, BA1 in the same cycle in which \overline{CS} , \overline{RAS} , \overline{CAS} and \overline{WE} are asserted Low is written into the Mode Register. A minimum of two clock cycles, tMRD, are required to complete the write operation in the Mode Register. The Mode Register is divided into various fields depending on functionality. The Burst Length uses A0~A2, Burst Type uses A3, and CAS Latency (read latency from column address) uses A4~A6. A logic 0 should be programmed to all the undefined addresses to ensure future compatibility. Reserved states should not be used to avoid unknown device operation or incompatibility with future versions. Refer to the table for specific codes for various burst lengths, burst types and CAS latencies.

Table 4. Mode Register Bitmap

- Burst Length Field (A2~A0)

This field specifies the data length of column access using the A2~A0 pins and selects the Burst Length to be 2, 4, 8.

Table 5. Burst Length

A2	A1	A0	Burst Length
0	0	0	Reserved
0	0	1	2
0	1	0	4
0	1	1	8
1	0	0	Reserved
1	0	1	Reserved
1	1	0	Reserved
1	1	1	Reserved

- Addressing Mode Select Field (A3)

The Addressing Mode can be one of two modes, either Interleave Mode or Sequential Mode. Both Sequential Mode and Interleave Mode support burst length of 2, 4 and 8.

Table 6. Addressing Mode

A3	Addressing Mode
0	Sequential
1	Interleave

2	X	X	0	0, 1	0, 1
	X	X	1	1, 0	1, 0
4	X	0	0	0, 1, 2, 3	0, 1, 2, 3
	X	0	1	1, 2, 3, 0	1, 0, 3, 2
	X	1	0	2, 3, 0, 1	2, 3, 0, 1
	X	1	1	3, 0, 1, 2	3, 2, 1, 0
8	0	0	0	0, 1, 2, 3, 4, 5, 6, 7	0, 1, 2, 3, 4, 5, 6, 7
	0	0	1	1, 2, 3, 4, 5, 6, 7, 0	1, 0, 3, 2, 5, 4, 7, 6
	0	1	0	2, 3, 4, 5, 6, 7, 0, 1	2, 3, 0, 1, 6, 7, 4, 5
	0	1	1	3, 4, 5, 6, 7, 0, 1, 2	3, 2, 1, 0, 7, 6, 5, 4
	1	0	0	4, 5, 6, 7, 0, 1, 2, 3	4, 5, 6, 7, 0, 1, 2, 3
	1	0	1	5, 6, 7, 0, 1, 2, 3, 4	5, 4, 7, 6, 1, 0, 3, 2
	1	1	0	6, 7, 0, 1, 2, 3, 4, 5	6, 7, 4, 5, 2, 3, 0, 1
1	1	1	7, 0, 1, 2, 3, 4, 5, 6	7, 6, 5, 4, 3, 2, 1, 0	

- CAS Latency Field (A6~A4)

This field specifies the number of clock cycles from the assertion of the Read command to the first read data. The minimum whole value of CAS Latency depends on the frequency of CK. The minimum whole value satisfying the following formula must be programmed into this field. $t_{CAC}(\min) \leq \text{CAS Latency} \times t_{CK}$

Table 8. CAS Latency

A6	A5	A4	CAS Latency
0	0	0	Reserved
0	0	1	Reserved
0	1	0	2 clocks
0	1	1	3 clocks
1	0	0	Reserved
1	0	1	Reserved
1	1	0	2.5 clocks
1	1	1	Reserved

- Test Mode field (A8~A7)

These two bits are used to enter the test mode and must be programmed to "00" in normal operation.

Table 9. Test Mode

- (BA0, BA1)

Table 10. MRS/EMRS

BA1	BA0	A12 ~ A0
RFU	0	MRS Cycle
RFU	1	Extended Functions (EMRS)

Extended Mode Register Set (EMRS)

The Extended Mode Register Set stores the data for enabling or disabling DLL and selecting output driver strength. The default value of the extended mode register is not defined, therefore must be written after power up for proper operation. The Extended Mode Register is written by asserting Low on \overline{CS} , \overline{RAS} , \overline{CAS} , \overline{WE} , BA1 and BA0 (the device should have all banks idle with no bursts in progress prior to writing into the mode register, and CKE should be High). The state of A0 ~ A12, BA0 and BA1 is written in the mode register in the same cycle as \overline{CS} , \overline{RAS} , \overline{CAS} , and \overline{WE} going low. The DDR SDRAM should be in all bank precharge with CKE already high prior to writing into the extended mode register. A1 is used for setting driver strength to normal, or weak. Two clock cycles are required to complete the write operation in the extended mode register. The mode register contents can be changed using the same command and clock cycle requirements during operation as long as all banks are in the idle state. A0 is used for DLL enable or disable. "High" on BA0 is used for EMRS. Refer to the table for specific codes.

Table 11. Extended Mode Register Bitmap

Table 12. Absolute Maximum Rating

Symbol	Item	Values	Unit	
V _{IN} , V _{OUT}	Input, Output Voltage	- 0.5~ V _{DDQ} + 0.5	V	
V _{DD} , V _{DDQ}	Power Supply Voltage	- 1~3.6	V	
T _A	Ambient Temperature	Commercial	0~70	°C
		Industrial	-40~85	°C
T _{STG}	Storage Temperature	- 55~150	°C	
T _{SOLDER}	Soldering Temperature	260	°C	
P _D	Power Dissipation	1	W	
I _{OS}	Short Circuit Output Current	50	mA	

Note1: Stress greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device.

Note2: These voltages are relative to V_{SS}

Table 13. Recommended D.C. Operating Conditions (T_A = -40 ~ 85 °C)

Symbol	Parameter	Min.	Max.	Unit	Note
V _{DD}	Power Supply Voltage	2.3	2.7	V	
V _{DDQ}	Power Supply Voltage (for I/O Buffer)	2.3	2.7	V	
V _{REF}	Input Reference Voltage	0.49*V _{DDQ}	0.51* V _{DDQ}	V	
V _{IH} (DC)	Input High Voltage (DC)	V _{REF} + 0.15	V _{DDQ} + 0.3	V	
V _{IL} (DC)	Input Low Voltage (DC)	-0.3	V _{REF} - 0.15	V	
V _{TT}	Termination Voltage	V _{REF} - 0.04	V _{REF} + 0.04	V	
V _{IN} (DC)	Input Voltage Level, CK and \overline{CK} inputs	-0.3	V _{DDQ} + 0.3	V	
V _{ID} (DC)	Input Different Voltage, CK and \overline{CK} inputs	0.36	V _{DDQ} + 0.6	V	
I _I	Input leakage current	-2	2	μA	
I _{OZ}	Output leakage current	-5	5	μA	
I _{OH}	Output High Current	-16.2	-	mA	V _{OH} = 1.95V
I _{OL}	Output Low Current	16.2	-	mA	V _{OL} = 0.35V

Note : All voltages are referenced to V_{SS}.

Table 14. Capacitance (V_{DD} = 2.5V, f = 1MHz, T_A = 25 °C)

Symbol	Parameter	Min.	Max.	Unit
C _{IN1}	Input Capacitance (CK, \overline{CK})	2	3	pF
C _{IN2}	Input Capacitance (All other input-only pins)	2	3	pF
C _{I/O}	DQ, DQS, DM Input/Output Capacitance	4	5	pF

Note: These parameters are guaranteed by design, periodically sampled and are not 100% tested

Table 15. D.C. Characteristics ($V_{DD} = 2.5V \pm 0.2V$, $T_A = -40\sim 85\text{ }^\circ\text{C}$)

Parameter & Test Condition	Symbol	-5	Unit	Note
		Max.		
OPERATING CURRENT: One bank; Active-Precharge; $t_{RC}=t_{RC}(\text{min})$; $t_{CK}=t_{CK}(\text{min})$; DQ,DM and DQS inputs changing once per clock cycle; Address and control inputs changing once every two clock cycles.	IDD0	80	mA	
OPERATING CURRENT: One bank; BL=4; reads - Refer to the following page for detailed test conditions	IDD1	90	mA	
PRECHARGE POWER-DOWN STANDBY CURRENT: All banks idle; power-down mode; $t_{CK}=t_{CK}(\text{min})$; CKE = LOW	IDD2P	5	mA	
PRECHARGE FLOATING STANDBY CURRENT: CS = HIGH; all banks idle; CKE = HIGH; $t_{CK} = t_{CK}(\text{min})$; address and other control inputs changing once per clock cycle; $V_{IN} = V_{REF}$ for DQ, DQS and DM	IDD2F	35	mA	
PRECHARGE QUIET STANDBY CURRENT: CS =HIGH; all banks idle; CKE =HIGH; $t_{CK}=t_{CK}(\text{min})$ address and other control inputs stable at $\geq V_{IH}(\text{min})$ or $\leq V_{IL}(\text{max})$; $V_{IN} = V_{REF}$ for DQ, DQS and DM	IDD2Q	35	mA	
ACTIVE POWER-DOWN STANDBY CURRENT : one bank active; power-down mode; CKE=LOW; $t_{CK}=t_{CK}(\text{min})$	IDD3P	20	mA	
ACTIVE STANDBY CURRENT : \overline{CS} =HIGH;CKE=HIGH; one bank active ; $t_{RC}=t_{RC}(\text{max})$; $t_{CK}=t_{CK}(\text{min})$;Address and control inputs changing once per clock cycle; DQ,DQS and DM inputs changing twice per clock cycle	IDD3N	65	mA	
OPERATING CURRENT BURST READ : BL=2; READS; Continuous burst; one bank active; Address and control inputs changing once per clock cycle; $t_{CK}=t_{CK}(\text{min})$; $I_{out}=0\text{mA}$;50% of data changing on every transfer	IDD4R	130	mA	
OPERATING CURRENT BURST Write : BL=2; WRITES; Continuous Burst ;one bank active; address and control inputs changing once per clock cycle; $t_{CK}=t_{CK}(\text{min})$; DQ,DQS and DM changing twice per clock cycle; 50% of data changing on every transfer	IDD4W	130	mA	
AUTO REFRESH CURRENT : $t_{RC}=t_{RFC}(\text{min})$; $t_{CK}=t_{CK}(\text{min})$	IDD5	140	mA	
SELF REFRESH CURRENT: Self Refresh Mode ; CKE $\leq 0.2V$; $t_{CK}=t_{CK}(\text{min})$	IDD6	6	mA	1
BURST OPERATING CURRENT 4 bank operation: Four bank interleaving READs; BL=4;with Auto Precharge; $t_{RC}=t_{RC}(\text{min})$; $t_{CK}=t_{CK}(\text{min})$; Address and control inputs change only during Active, READ , or WRITE command	IDD7	210	mA

Table 17. Recommended A.C. Operating Conditions ($V_{DD} = 2.5V \pm 0.2V$, $T_A = -40\sim 85\text{ }^\circ\text{C}$)

Symbol	Parameter	Min.	Max.	Unit
V_{IH} (AC)	Input High Voltage (AC)	$V_{REF} + 0.31$	-	V
V_{IL} (AC)	Input Low Voltage (AC)	-	$V_{REF} - 0.31$	V
V_{ID} (AC)	Input Different Voltage, CK and \overline{CK} inputs	0.7	$V_{DDQ} + 0.6$	V
V_{IX} (AC)	Input Crossing Point Voltage, CK and \overline{CK} inputs	$0.5 * V_{DDQ} - 0.2$	$0.5 * V_{DDQ} + 0.2$	V

Note:

- 1) Enables on-chip refresh and address counters.
- 2) $\text{Min}(t_{CL}, t_{CH})$ refers to the smaller of the actual clock low time and actual clock high time as provided to the device.
- 3) t_{HZ} and t_{LZ} transitions occur in the same access time windows as valid data transitions. These parameters are not referenced to a specific voltage level, but specify when the device output is no longer driving(HZ), or begins driving(LZ).
- 4) The specific requirement is that DQS be valid (High, Low, or at some point on a valid transition) on or before this CLK edge. A valid transition is defined as monotonic, and meeting the input slew rate specifications of the device. When no writes were previously in progress on the bus, DQS will be transitioning from High-Z to logic LOW. If a previous write was in progress, DQS could be HIGH, LOW, or transitioning from HIGH to LOW at this time, depending on t_{DQSS} .
- 5) The maximum limit for this parameter is not a device limit. The device will operate with a greater value for this parameter, but system performance (bus turnaround) will degrade accordingly.
- 6) For command/address and CK & \overline{CK} slew rate $\geq 1.0V/ns$.
- 7) A maximum of eight AUTO REFRESH commands can be posted to any given DDR SDRAM device.
- 8) Power-up sequence is described in Note 10
- 9) A.C. Test Conditions

Table 18. SSTL_2 Interface

Reference Level of Output Signals (V_{REF})	$0.5 * V_{DDQ}$
Output Load	Reference to the Test Load
Input Signal Levels	$V_{REF} + 0.31\text{ V} / V_{REF} - 0.31\text{ V}$
Input Signals Slew Rate	1 V/ns
Reference Level of Input Signals	$0.5 * V_{DDQ}$

Figure 3. SSTL_2 A.C. Test Load

10) Power up Sequence

Power up must be performed in the following sequence.

- 1) Apply power to V_{DD} before or at the same time as V_{DDQ} , V_{TT} and V_{REF} when all input signals are held "NOP" state and maintain CKE "LOW".
- 2) Start clock and maintain stable condition for minimum 200 μ s.
- 3) Issue a "NOP" command and keep CKE "HIGH"
- 4) Issue a "Precharge All" command.
- 5) Issue EMRS – enable DLL.
- 6) Issue MRS – reset DLL. (An additional 200 clock cycles are required to lock the DLL).
- 7) Precharge all banks of the device.
- 8) Issue two or more Auto Refresh commands.
- 9) Issue MRS – with A8 to low to initialize the mode register.

 Don't Care

Figure 31. Data Output (Read) Timing

Burst Length = 4 in the case shown

Figure 32. Initialize and Mode Register Sets

*=VTT is not applied directly to the device, however t_{VTD} must be greater than or equal to zero to avoid device latch-up.
 ** = t_{MRD} is required before any command can be applied, and 200 cycles of CK are required before any executable command can be applied the two auto Refresh commands may be moved to follow the first MRS but precede the second PRECHARGE ALL command.

 **Don't Care**

Figure 33. Power Down Mode

No column accesses are allowed to be in progress at the time Power-Down is entered

*=If this command is a PRECHARGE ALL (or if the device is already in the idle state) then the Power-Down mode shown is Precharge Power Down. If this command is an ACTIVE (or if at least one row is already active) then the Power-Down mode shown is active Power Down.

 Don't Care

Figure 34. Auto Refresh Mode

* = "Don't Care" , if A10 is HIGH at this point; A10 must be HIGH if more than one bank is active (i.e., must precharge all active banks)
 PRE = PRECHARGE, ACT = ACTIVE, RA = Row Address, BA = Bank Address, AR = AUTOREFRESH
 NOP commands are shown for ease of illustration; other valid commands may be possible after t_{RFC}
 DM, DQ and DQS signals are all "Don't Care" /High-Z for operations shown

 Don't Care

Figure 35. Self Refresh Mode

* = Device must be in the "All banks idle" state prior to entering Self Refresh mode

** = t_{XSNR} is required before any non-READ command can be applied, and t_{XSRD} (200 cycles of CK) is required before a READ command can be applied.

 Don't Care

Figure 36. Read without Auto Precharge

DO n = Data Out from column n

Burst Length = 4 in the case shown

3 subsequent elements of Data Out are provided in the programmed order following DO n

DIS AP = Disable Autoprecharge

* = "Don't Care" , if A10 is HIGH at this point

PRE = PRECHARGE, ACT = ACTIVE, RA = Row Address, BA = Bank Address, AR = AUTOREFRESH

NOP commands are shown for ease of illustration; other commands may be valid at these times

Precharge may not be issued before t_{RAS} ns after the ACTIVE command for applicable banks

 **Don't Care**

Figure 37. Read with Auto Precharge

DO n = Data Out from column n

Burst Length = 4 in the case shown

3 subsequent elements of Data Out are provided in the programmed order following DO n

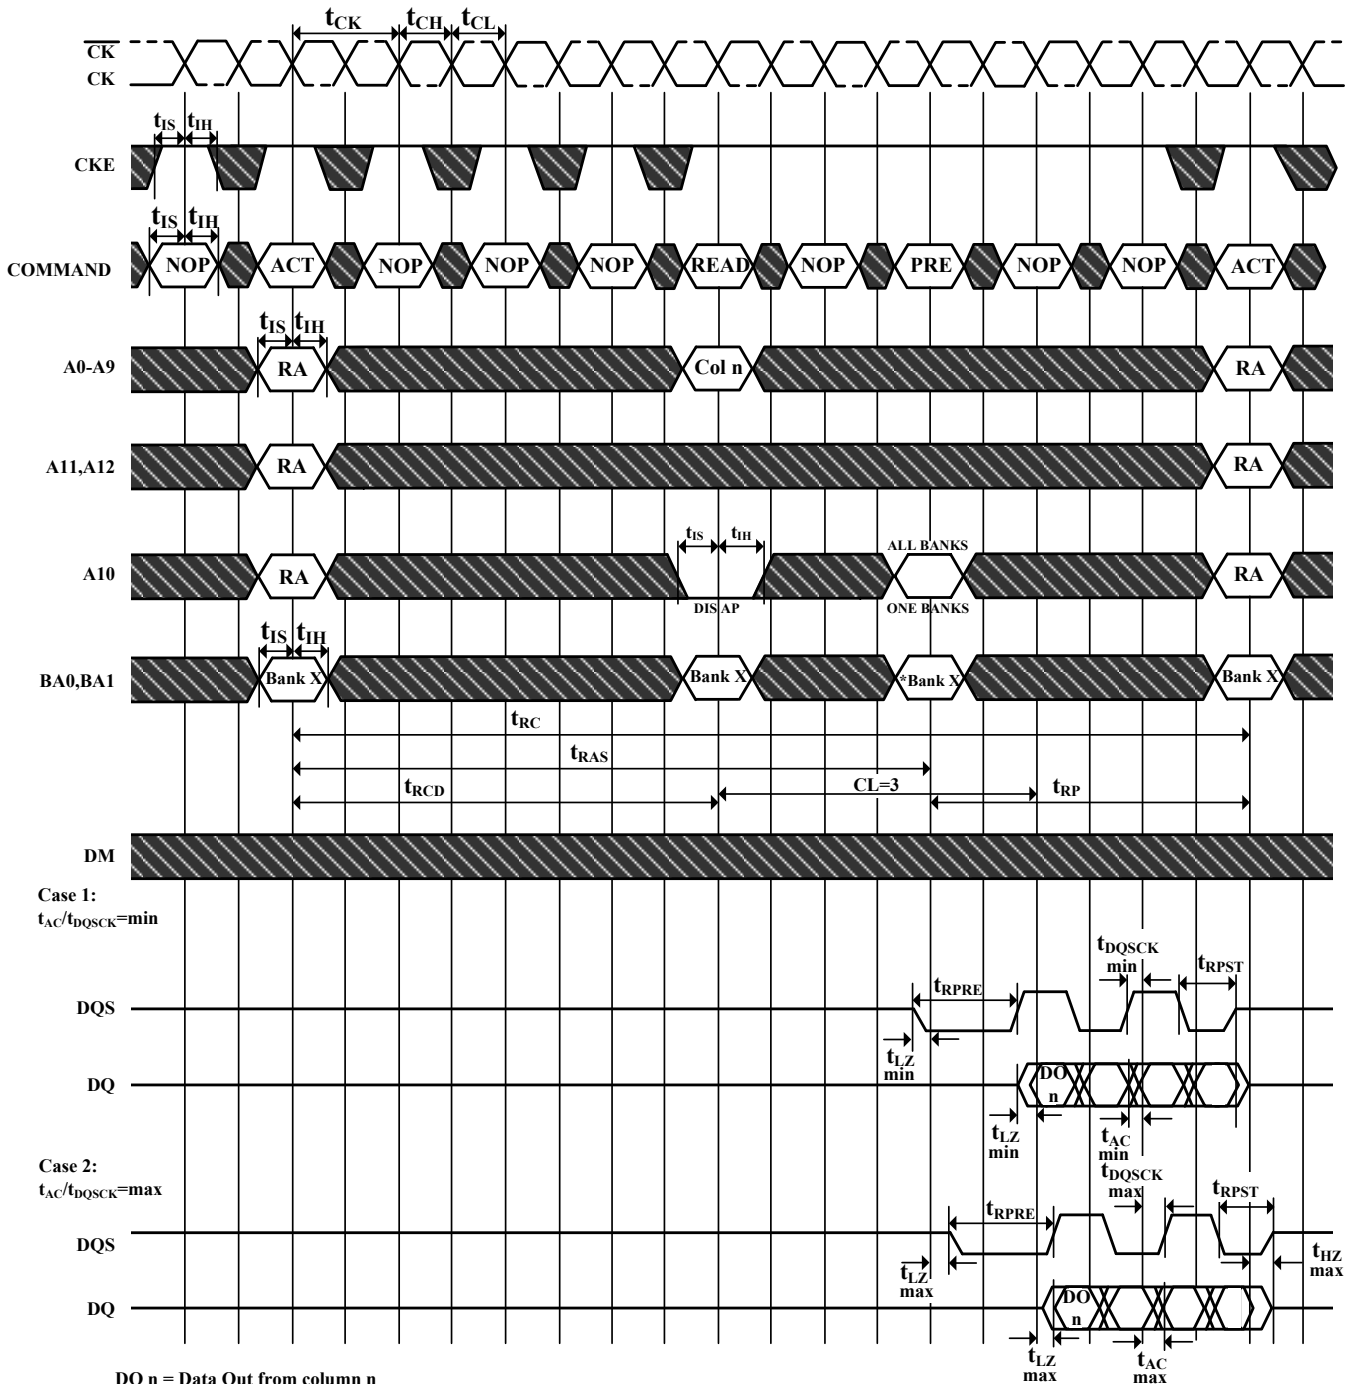

EN AP = Enable Autoprecharge

ACT = ACTIVE, RA = Row Address

NOP commands are shown for ease of illustration; other commands may be valid at these times

The READ command may not be issued until t_{TRAP} has been satisfied. If Fast Autoprecharge is supported, t_{TRAP} = t_{RCD}, else the READ may not be issued prior to t_{RASmin} - (BL*t_{CK}/2)

 Don't Care

Figure 38. Bank Read Access

DO n = Data Out from column n

Burst Length = 4 in the case shown

3 subsequent elements of Data Out are provided in the programmed order following DO n

DIS AP = Disable Autoprecharge

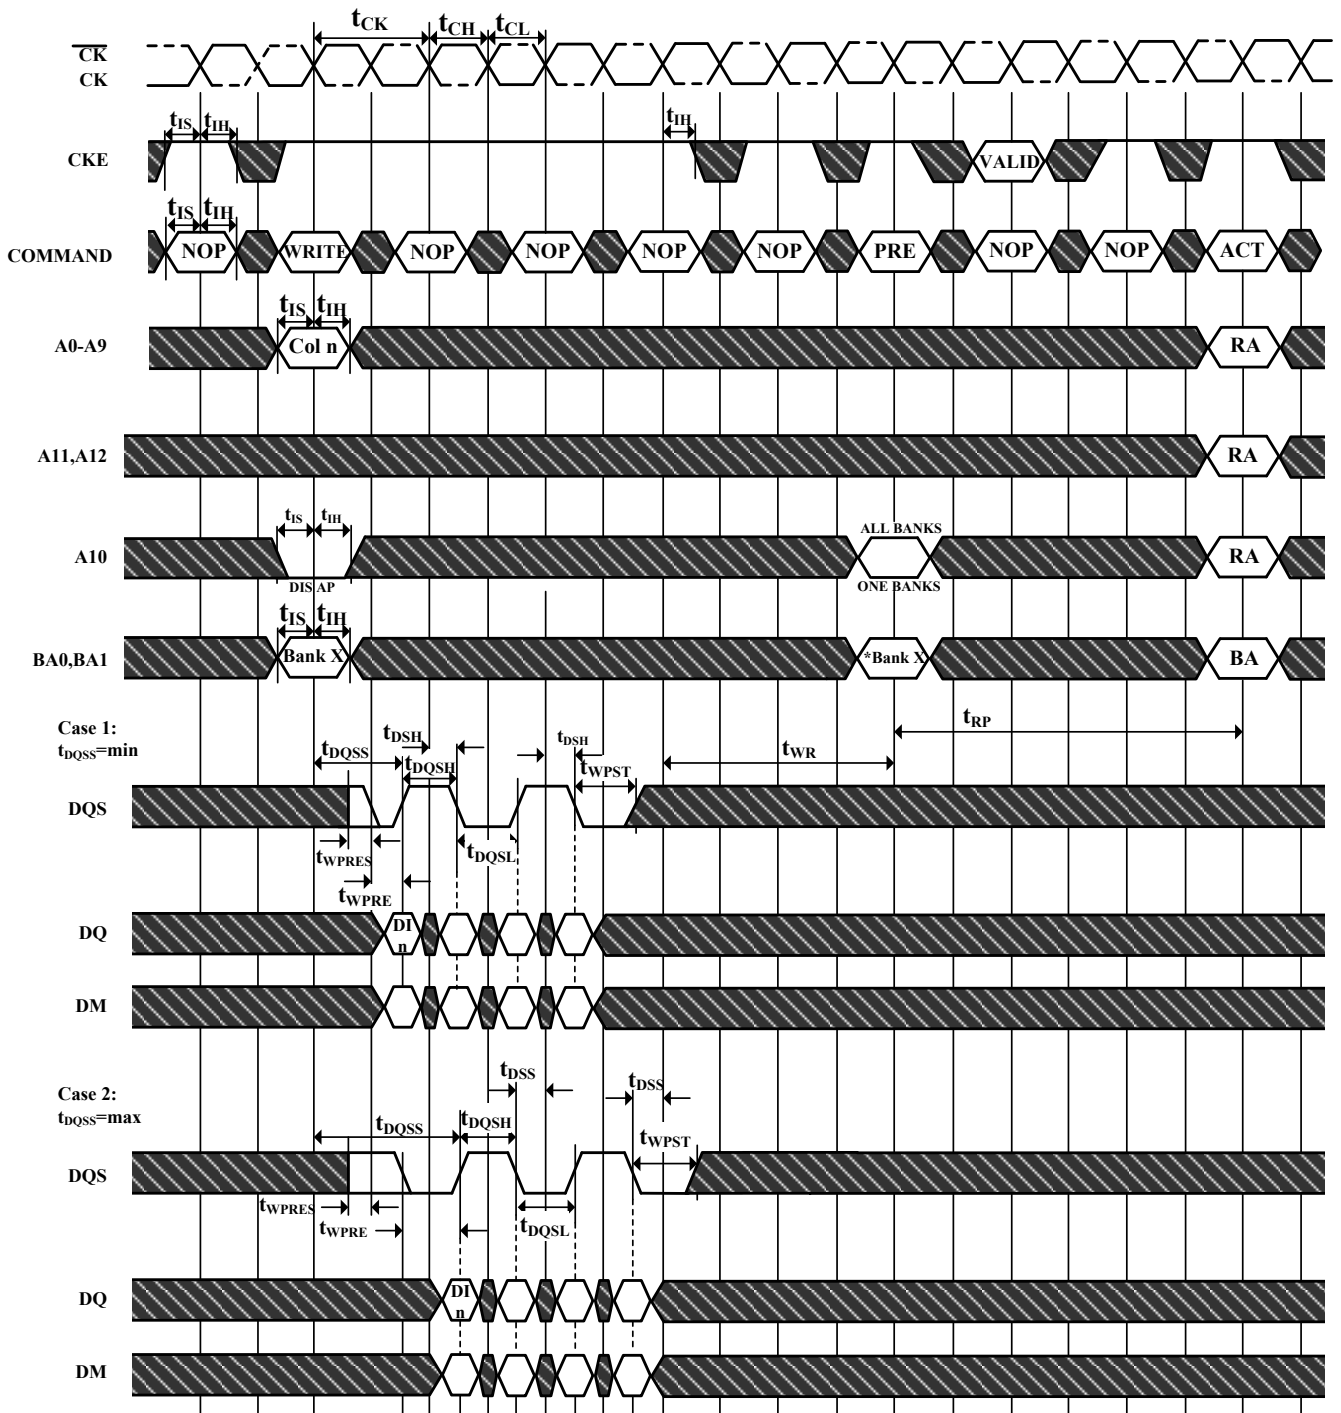

* = " Don't Care" , if A10 is HIGH at this point

PRE = PRECHARGE, ACT = ACTIVE, RA = Row Address, BA = Bank Address

NOP commands are shown for ease of illustration; other commands may be valid at these times

Note that $t_{RCD} > t_{RCD\ MIN}$ so that the same timing applies if Autoprecharge is enabled (in which case t_{RAS} would be limiting)

 **Don't Care**

Figure 39. Write without Auto Precharge

DI n = Data In from column n

Burst Length = 4 in the case shown

3 subsequent elements of Data In are provided in the programmed order following DI n

DIS AP = Disable Autoprecharge

*=" Don't Care" , if A10 is HIGH at this point

PRE = PRECHARGE, ACT = ACTIVE, RA = Row Address, BA = Bank Address, AR = AUTOREFRESH

NOP commands are shown for ease of illustration; other commands may be valid at these times

Although tDQSS is drawn only for the first DQS rising edge, each rising edge of DQS must fall within the $\pm 25\%$ window of the corresponding positive clock edge

Precharge may not be issued before tRAS ns after the ACTIVE command for applicable banks

 Don't Care

Figure 40. Write with Auto Precharge

DI n = Data In from column n

Burst Length = 4 in the case shown

3 subsequent elements of Data Out are provided in the programmed order following DI n

EN AP = Enable Autoprecharge

ACT = ACTIVE, RA = Row Address, BA = Bank Address

NOP commands are shown for ease of illustration; other commands may be valid at these times

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
