

# **General Description**

The 851010 is a 1-to-10 Differential HCSL Fanout Buffer. The 851010 is designed to translate any differential signal levels to differential HCSL output levels. An external reference resistor is used to set the value of the current supplied to an external load. The load resistor value is chosen to equal the value of the characteristic line impedance of  $50\Omega$ . The 851010 is characterized at an operating supply voltage of 3.3V.

The differential HCSL outputs, accurate crossover voltage and symmetric duty cycle makes the 851010 ideal for interfacing to PCI Express and FBDIMM applications.

## Features

- Ten differential HCSL outputs
- Translates any differential input signal (LVPECL, LVHSTL, LVDS, HCSL) to HCSL levels without external bias networks
- Maximum output frequency: 250MHz
- Output skew: 165ps (maximum)
- Part-to-part skew: 250ps (maximum)
- Output drift: 140ps (maximum)
- V<sub>OH</sub>: 850mV (maximum)
- Full 3.3V supply voltage
- Available in lead-free (RoHS 6) package
- 0°C to 70°C ambient operating temperature

## **Output Driver Current**

The 851010 outputs are HCSL differential current drive with the current being set with a resistor from  $I_{REF}$  to ground. For a *single load* and a 50 $\Omega$  pc board trace, the drive current would typically be set with a  $R_{REF}$  of 950 $\Omega$  which products an  $I_{REF}$  of 1.16mA. The  $I_{REF}$  is multiplied by a current mirror to an output drive of 12\*1.16mA or 13.90mA. See *Figure 1* for current mirror and output drive details.

Figure 1. HCSL Current Mirror and Output Drive

# **Absolute Maximum Ratings**

NOTE: Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the *DC Characteristics or AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

Item	Rating
Supply Voltage, V <sub>DD</sub>	4.6V
Inputs, V <sub>I</sub>	-0.5V to V <sub>DD</sub> + 0.5V
Outputs, I <sub>O</sub>	-0.5V to V <sub>DD</sub> + 0.5V
Package Thermal Impedance, $\theta_{JA}$	65.7°C/W (0 mps)
Storage Temperature, T <sub>STG</sub>	-65°C to 150°C

## **DC Electrical Characteristics**

### Table 2A. Power Supply DC Characteristics, $V_{DD} = 3.3V \pm 5\%$ , $T_A = 0^{\circ}C$ to $70^{\circ}C$

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
V <sub>DD</sub>	Core Supply Voltage		3.135	3.3	3.465	V
I <sub>DD</sub>	Power Supply Current; NOTE 1				105	mA

NOTE 1: Measured using 200MHz input frequency.

#### Table 2B. Differential DC Characteristics, $V_{DD}$ = 3.3V±5%, $T_A$ = 0°C to 70°C

Symbol	Parameter		Test Conditions	Minimum	Typical	Maximum	Units
IIH	Input High Current	CLK, nCLK	$V_{DD} = V_{IN} = 3.465V$			5	μΑ
IIL	Input Low Current	CLK, nCLK	V <sub>DD</sub> = 3.465V, V <sub>IN</sub> = 0V			5	μA
V <sub>PP</sub>	Peak-to-Peak Voltage; NOTE 1			0.15		1.3	V
V <sub>CMR</sub>	Common Mode Input Voltage; NOTE 1, 2			GND + 0.5		V <sub>DD</sub> – 0.85	V

NOTE 1:  $V_{IL}$  should not be less than -0.3V.

NOTE 2: Common mode input voltage is defined as  $\ensuremath{\mathsf{V}_{\mathsf{IH}}}$  .

# **AC Electrical Characteristics**

#### Table 3. HCSL AC Characteristics, $V_{DD}$ = 3.3V±5%, $T_A$ = 0°C to 70°C

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
f <sub>MAX</sub>	Output Frequency				250	MHz
t <sub>PD</sub>	Propagation Delay, NOTE 1	Measured on at V <sub>OX</sub>	1.5		2.75	ns
<i>t</i> sk(o)	Output Skew; NOTE 2, 3	Measured on at V <sub>OX</sub>			165	ps
<i>t</i> sk(pp)	Part-to-Part Skew; NOTE 3, 4				250	ps
<i>t</i> jit	Buffer Additive Phase Jitter, RMS	CLK = 200MHz, Integration Range: 12kHz – 30MHz		0.24		ps
<i>t</i> sk(drift)	Output Drift; NOTE 5				140	ps

V <sub>MIN</sub>	Absolute Min Output Voltage; NOTE 6	<i>f</i> ≤ 150MHz	-150		150	mV
V <sub>CROSS</sub>	Absolute Crossing Voltage; NOTE 7, 8, 9		250		550	mV
$\Delta V_{CROSS}$	Total Variation of V <sub>CROSS</sub> over all edges; NOTE 7, 8, 10				140	mV
t <sub>R</sub> / t <sub>F</sub>	Rise/Fall Edge Rate; NOTE 11, 12		0.6		4.0	V/ns
odc	Output Duty Cycle; NOTE 13		47		53	%

**NOTE:** Electrical parameters are guaranteed over the specified ambient operating temperature range, which is established when the device is mounted in a test socket with maintained transverse airflow greater than 500 lfpm. The device will meet specifications after thermal equilibrium has been reached under these conditions.

NOTE: Current adjust set for V<sub>OH</sub> = 0.7V. Measurements refer to PCIEX outputs only.

**NOTE:** Characterized using an  $R_{REF}$  value of 950 $\Omega$  resistor.

**NOTE 1:** Measured from the differential input cross point to the differential output crossing point.

**NOTE 2:** Defined as skew between outputs at the same supply voltage and with equal load conditions. Measured at the differential output cross point.

NOTE 3: This parameter is defined in accordance with JEDEC Standard 65.

**NOTE 4:** Defined as skew between outputs on different devices operating at the same supply voltage, same frequency, same temperature and with equal load conditions. Using the same type of inputs on each device, the outputs are measured at the differential cross point.

**NOTE 5:** Output Drift is measured as the change in the time placement of the differential cross point for each output on a given device due to a change in temperature and supply voltage. Measured at the differential cross point.

**NOTE 6:** Measurement using  $R_{REF}$  = to 950 $\Omega$ ,  $R_{LOAD}$  = to 50 $\Omega$ .

NOTE 7: Measurement taken from single-ended waveform.

NOTE 8: Measured at crossing point where the instantaneous voltage value of the rising edge of Qx equals the falling edge of nQx.

See Parameter Measurement Information Section.

**NOTE 9:** Refers to the total variation from the lowest crossing point to the highest, regardless of which edge is crossing. Refers to all crossing points for this measurement. See Parameter Measurement Information Section.

**NOTE 10:** Defined as the total variation of all crossing voltage of rising Qx and falling nQx. This is the maximum allowed variance in the  $V_{CROSS}$  for any particular system. See Parameter Measurement Information Section.

NOTE 11: Measurement taken from differential waveform.

**NOTE 12:** Measurement from -150mV to +150mV on the differential waveform (derived from Qx minus nQx). The signal must be monotonic through the measurement region for rise and fall time. The 300mV measurement window is centered on the differential zero crossing. **NOTE 13:** Assuming 50% input duty cycle. Data taken at  $f \le 200$ MHz, unless otherwise specified.

### **Outputs:**

### **Differential Outputs**

All unused differential outputs can be left floating. We recommend that there is no trace attached. Both sides of the differential output pair should either be left floating or terminated.

## Wiring the Differential Input to Accept Single-Ended Levels

*Figure 2* shows how a differential input can be wired to accept single ended levels. The reference voltage  $V_{REF} = V_{DD}/2$  is generated by the bias resistors R1 and R2. The bypass capacitor (C1) is used to help filter noise on the DC bias. This bias circuit should be located as close to the input pin as possible. The ratio of R1 and R2 might need to be adjusted to position the  $V_{REF}$  in the center of the input voltage swing. For example, if the input clock swing is 2.5V and  $V_{DD} = 3.3V$ , R1 and R2 value should be adjusted to set  $V_{REF}$  at 1.25V. The values below are for when both the single ended swing and  $V_{DD}$  are at the same voltage. This configuration requires that the sum of the output impedance of the driver (Ro) and the series resistance (Rs) equals the transmission line impedance. In addition, matched termination at the input will attenuate the signal in half. This can be done in one of two ways. First, R3 and R4 in parallel should equal the transmission line impedance. For most 50 $\Omega$  applications, R3 and R4 can be 100 $\Omega$ . The values of the resistors can be increased to reduce the loading for slower and weaker LVCMOS driver. When using single-ended signaling, the noise rejection benefits of differential signaling are reduced. Even though the differential input can handle full rail LVCMOS signaling, it is recommended that the amplitude be reduced. The datasheet specifies a lower differential amplitude, however this only applies to differential signals. For single-ended applications, the swing can be larger, however V<sub>IL</sub> cannot be less than -0.3V and V<sub>IH</sub> cannot be more than V<sub>DD</sub> + 0.3V. Though some of the recommended components might not be used, the pads should be placed in the layout. They can be utilized for debugging purposes. The datasheet specifications are characterized and guaranteed by using a differential signal.

Figure 2. Recommended Schematic for Wiring a Differential Input to Accept Single-ended Levels

## **Differential Clock Input Interface**

The CLK/nCLK accepts HCSL, LVDS, LVPECL and SSTL and other differential signals. Both differential signals must meet the V<sub>PP</sub> and V<sub>CMR</sub> input requirements. *Figures 3A to 3F* show interface examples for the CLK/nCLK input driven by the most common driver types. The input interfaces suggested here are examples only. Please consult

with the vendor of the driver component to confirm the driver termination requirements. For example in Figure 3A, the input termination applies for IDT open emitter LVHSTL drivers. If you are using an LVHSTL driver from another vendor, use their termination recommendation.

## **Recommended Termination**

*Figure 4A* is the recommended termination for applications which require the receiver and driver to be on a separate PCB. All traces should be  $50\Omega$  impedance.

Figure 4A. Recommended Termination

*Figure 4B* is the recommended termination for applications which require a point to point connection and contain the driver and receiver on the same PCB. All traces should all be  $50\Omega$  impedance.

Figure 4B. Recommended Termination

## **Power Considerations**

This section provides information on power dissipation and junction temperature for the 851010. Equations and example calculations are also provided.

#### 1. Power Dissipation.

The total power dissipation for the 851010 is the sum of the core power plus the power dissipated in the load(s). The following is the power dissipation for  $V_{DD} = 3.3V + 5\% = 3.465V$ , which gives worst case results.

- Power (core)<sub>MAX</sub> = V<sub>DD\_MAX</sub> \* I<sub>DD\_MAX</sub> = 3.465V \* 105mA = **363.825mW**
- Power (outputs)<sub>MAX</sub> = 44.5mW/Loaded Output Pair If all outputs are loaded, the total power is 10 \* 44.5mW = 445mW

Total Power\_MAX (3.465V, with all outputs switching) = 363.825mW + 445mW = 808.825mW

.

#### 2. Junction Temperature.

Junction temperature, Tj, is the temperature at the junction of the bond wire and bond pad directly affects the reliability of the device. The maximum recommended junction temperature is 125°C. Limiting the internal transistor junction temperature, Tj, to 125°C ensures that the bond wire and bond pad temperature remains below 125°C.

The equation for Tj is as follows: Tj =  $\theta_{JA}$  \* Pd\_total + T<sub>A</sub>

Tj = Junction Temperature

 $\theta_{JA}$  = Junction-to-Ambient Thermal Resistance

Pd\_total = Total Device Power Dissipation (example calculation is in section 1 above)

T<sub>A</sub> = Ambient Temperature

In order to calculate junction temperature, the appropriate junction-to-ambient thermal resistance  $\theta_{JA}$  must be used. Assuming no air flow and a multi-layer board, the appropriate value is 65.7°C/W per Table 4 below.

Therefore, Tj for an ambient temperature of 70°C with all outputs switching is:

70°C + 0.809W \* 65.7°C/W = 123.2°C. This is below the limit of 125°C.

This calculation is only an example. Tj will obviously vary depending on the number of loaded outputs, supply voltage, air flow and the type of board (multi-layer).

#### Table 4. Thermal Resistance $\theta_{JA}$ for 32 Lead LQFP, Forced Convection

$\theta_{JA}$ by Velocity						
Meters per Second	0	1	2.5			
Multi-Layer PCB, JEDEC Standard Test Boards	65.7°C/W	55.9°C/W	52.4°C/W			

10

# () IDT.

The purpose of this section is to calculate power dissipation on the IC per HCSL output pair.

HCSL output driver circuit and termination are shown in Figure 5.

Figure 5. HCSL Driver Circuit and Termination

HCSL is a current steering output which sources a maximum of 17mA of current per output. To calculate worst case on-chip power dissipation, use the following equations which assume a  $50\Omega$  load to ground.

The highest power dissipation occurs when  $V_{\text{DD}-\text{MAX}}.$ 

=  $(V_{DD_MAX} - I_{OUT} * R_L) * I_{OUT}$ 

= (3.465V – 17mA \* 50Ω) \* 17mA

Total Power Dissipation per output pair = 44.5mW

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию.

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России, а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научноисследовательскими институтами России.

С нами вы становитесь еще успешнее!
