

1 Description

The RedRock™ RR121 Series is a magnetic sensor with digital push-pull output ideal for use in medical, industrial, automotive, and consumer applications. Based on patented Tunneling Magnetoresistance (TMR) technology with seamless CMOS integration, the RR121 offers multiple configurations of several parameters to enable applications like proximity sensing, rotary sensing, and level detection.

The RR121 features available operate sensitivities from 9 G (0.9 mT) to 70 G (7 mT), and either omnipolar, unipolar, or bipolar magnetic field response. It has the world's lowest average current drain (200 nA) for an active magnetic sensor, as well as operating frequencies up to 10 kHz and high operating temperature ranges from -40°C up to 125°C.

Device Information

Part Series	Package	Body Size (mm)
RR121	SOT-23-3	2.9 x 1.6 x 1.2
	LGA-4	1.4 x 1.4 x 0.45

Device Packages

2 Features

- ▶ Operate sensitivity from 9 G to 70 G
- ▶ Lowest Average Current < 200 nA
- ▶ Omnipolar and Bipolar Latching Responses Available
- ▶ Operating Frequencies up to 10 kHz
- ▶ Temperature Rated up to 125°C
- ▶ RoHS & REACH Compliant

3 Applications

- ▶ Proximity Detection
- ▶ Rotary Sensing
- ▶ Fluid Level Detection
- ▶ Door & Lid Closure Detection
- ▶ Utility Meters
- ▶ Portable Medical Devices
- ▶ Motor Controllers
- ▶ Consumer Electronics
- ▶ Wake-Up μ Processor

Functional Block Diagram

4 Specifications for all RR121 Series Sensors

4.1 Absolute Environmental Ratings for all RR121 Series Sensors¹

Parameters	Units	Min	Typ	Max
Operating Temperature (T_{OP})	°C	-40		+125
Storage Temperature (T_{STG})	°C	-65		+150
Junction Temperature (T_J)	°C	-40		+150
Soldering Temperature (3 cycles, 1 min.) (T_{SOL})	°C			+260
ESD Level Human Body Model per JESD22-A114	V			±4000

4.2 Absolute Electrical Ratings for all RR121 Series Sensors¹

Parameters	Units	Min	Typ	Max
Supply Voltage (V_{DD})	V	-0.3		+4.0
Push-pull Output (Active Low)(V_{OUT_PP})	V	-0.3		$V_{DD} + 0.3$
Open Drain Output Voltage (Active Low) (V_{OUT_OD})	V	-0.3		+5.5
Input and Output Current (V_{IN}/I_{OUT})	mA	-10		+10

4.3 Operating Electrical Characteristics for all RR121 Series Sensors²

Parameters	Units	Min	Typ	Max
Supply Voltage (V_{DD})	V	+2.7	+3.0	+3.6
Output Voltage (High) ³ (V_{OUTH})	V	90% V_{DD}		
Output Voltage (Low) ³ (V_{OUTL})	V			10% V_{DD}
Power-On Time (t_{ON})($V_{DD} > 2.7V$)	μs		500	
Under-Voltage Lockout Threshold Rising V_{DD} (V_{UVLO_RISE})	V		+2.20	+2.60
Under-Voltage Lockout Threshold Falling V_{DD} (V_{UVLO_FALL})	V	+1.90	+2.15	
Under-Voltage Lockout Hysteresis (V_{UV_HYST})	mV		+50	

Notes:

- Exceeding Absolute Ratings may cause permanent damage to the device. Exposure at the maximum rated conditions for extended periods of time may also affect device reliability.
- Unless otherwise specified, all characteristics are measured at 25°C.
- See "Magnetic Field vs. Output Status" for more details.

ESD Note: This product uses semiconductors that can be damaged by electrostatic discharge (ESD). When handling, proper ESD precautions should be taken to avoid performance degradation or loss of functionality. Damage due to inappropriate handling is not covered under warranty.

5 Operating Characteristics for RR121-1B13-311 and RR121-1B13-312¹

Parameters	Units	Min	Typ	Max
Average Supply Current ($I_{DD(AVG)}$) ²	nA		200	700
Switching Frequency (f_{SW})	Hz	1	2	4
Active Mode Time (t_{ACT})	μs		1.4	
Idle Mode Time (t_{IDLE})	ms		500	
Operate Point (B_{OPN})	G	27	30	38
Operate Point (B_{OPS})	G	-38	-30	-27
Release Point (B_{RPN})	G	18	20	27
Release Point (B_{RPS})	G	-27	-20	-18
Hysteresis (B_{HYST}) ³	G	5	10	

Notes:

1. Unless otherwise specified, $V_{DD} = 2.7 \text{ V}$ to 3.6 V , $T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$. Typical values are $V_{DD} = 3.0 \text{ V}$ and $T_A = +25^\circ\text{C}$.

2. Conditions: $t = 10 \text{ seconds}$

3. Conditions: $B_{HYST} = B_{OP} - B_{RP}$

6 Graphs - Typical Electrical Characteristics for RR121-1B13-311 and RR121-1B13-312

$V_{DD} = 3.0 \text{ V}$ and $T_A = +25^\circ\text{C}$, $C_{DD} = 1.0 \mu\text{F}$ (unless otherwise specified)

6.1 Average Supply Current vs. Supply Voltage vs. Temperature

6.2 Average Supply Current vs. Temperature vs. Supply Voltage

6 Graphs - Typical Electrical Characteristics for RR121-1B13-311 and RR121-1B13-312

$V_{DD} = 3.0\text{ V}$ and $T_A = +25\text{ }^{\circ}\text{C}$, $C_{DD} = 1.0\text{ }\mu\text{F}$ (unless otherwise specified)

6.3 Sampling Frequency vs. Supply Voltage vs. Temperature

7 Graphs - Typical Magnetic Characteristics for RR121-1B13-311 and RR121-1B13-312

$V_{DD} = 3.0\text{ V}$ and $T_A = +25\text{ }^{\circ}\text{C}$, $C_{DD} = 1.0\text{ }\mu\text{F}$ (unless otherwise specified)

7.1 B_{OPN} (Blue) and B_{OPS} (Red) vs. Supply Voltage at +25°C

7.2 B_{RPN} (Blue) and B_{RPS} (Red) vs. Supply Voltage at +25°C

7 Graphs - Typical Magnetic Characteristics for RR121-1B13-311 and RR121-1B13-312

$V_{DD} = 3.0\text{ V}$ and $T_A = +25^\circ\text{C}$, $C_{DD} = 1.0\text{ }\mu\text{F}$ (unless otherwise specified)

7.3 B_{OPN} (Blue) and B_{OPS} (Red) vs. Operating Temperature at $V_{DD}=3.0\text{ V}$

7.4 B_{RPN} (Blue) and B_{RPS} (Red) vs. Operating Temperature at $V_{DD}=3.0\text{ V}$

8 Operate & Release Lobe Plots

Operate and release distances show are relative. The actual operate and release distances will depend on the type of magnet that is used.

25 Typical Magnetic Characteristics for RR121-1B93-312

$V_{DD} = 3.0\text{ V}$ and $T_A = +25\text{ }^{\circ}\text{C}$, $C_{DD} = 1.0\text{ }\mu\text{F}$ (unless otherwise specified)

25.3 B_{OPN} (Blue) and B_{OPS} (Red) vs. Operating Temperature at $V_{DD}=3.0\text{ V}$

25.4 B_{RPN} (Blue) and B_{RPS} (Red) vs. Operating Temperature at $V_{DD}=3.0\text{ V}$

26 Application Information

26.1 Application Circuit (SOT-23)

26.2 Application Circuit (LGA-4)

RR121 Push-Pull Output Application Circuit

The output voltage on the RR121 is active low, meaning that while a sufficiently strong magnetic field is present, the output voltage is low. The output voltage can be connected to a digital I/O pin on a microcontroller. A decoupling capacitor between the supply voltage and ground is required with placement close to the magnetic sensor. A typical capacitor value of $1.0\text{ }\mu\text{F}$ will suffice.

27 Part Selection and Ordering Information

27.1 Part Selection Table

Part Number	Magnetic Polarity Response	Operate Sensitivity (G)	Release Sensitivity (G)	Frequency (Hz)	I _{avg} (μA)	Temp. Rating (°C)	Supply Voltage (V _{dd})	Output Response	Package
RR121-1B13-312	Omni-polar	30	20	2	0.20	-40 - +125	2.7 - 3.6	Active Low	LGA-4
RR121-1B13-311	Omni-polar	30	20	2	0.20	-40 - +125	2.7 - 3.6	Active Low	SOT-23-3
RR121-1B53-311	Omni-polar	30	20	250	1.44	-40 - +125	2.7 - 3.6	Active Low	SOT-23-3
RR121-1A23-311	Omni-polar	9	5	10	0.24	-40 - +125	2.7 - 3.6	Active Low	SOT-23-3
RR121-3C63-311	Bipolar	10	-10	500	1.70	-40 - +125	2.7 - 3.6	Active Low	SOT-23-3
RR121-1F23-311	Omni-polar	70	50	10	0.24	-40 - +125	2.7 - 3.6	Active Low	SOT-23-3
RR121-1A53-311	Omni-polar	9	5	250	1.44	-40 - +125	2.7 - 3.6	Active Low	SOT-23-3
RR121-1E73-311	Omni-polar	15	10	2500	8	-40 - +125	2.7 - 3.6	Active Low	SOT-23-3
RR121-1B93-312	Omni-polar	30	20	10000	36	-40 - +125	2.7 - 3.6	Active Low	LGA-4

Note:

- Custom options available for Sensitivity, Frequency, Temperature Rating, Supply Voltage, Output Response & more.
Please contact redrock@cotorelay.com for more details.

27.2 Device Nomenclature

Ordering Information

RR121-XXX3-YYY

Series	Package
Magnetic Polarity Response	1: SOT-23-3
1 = Omnipolar	2: LGA-4
3 = Bipolar/Latch	Output Response
Magnetic Sensitivity	1: Active Low
A: Op 9, Rel 5	Supply Voltage/Output
B: Op 30, Rel 20	3: 3V
C: Op 10, Rel -10	Temp Rating (°C)
Clock Frequency (Hz)	3: -40-+125
1: 2 Hz	
2: 10 Hz	
5: 250 Hz	
6: 500 Hz	
7: 2500 Hz	
9: 10000 Hz	

28 Axis of Sensitivity

29 Dimensions *Millimeters (Inches)*

29.1 LGA-4 Package

29.2 SOT-23-3 Package

30 TMR Sensor Location

30.1 LGA Package

30.2 SOT Package

31 Magnetic Flux Response Diagrams

31.1 Omnipolar Magnetic Flux Response
(Active Low Option)

31.2 Bipolar Magnetic Flux Response
(Active Low Option)

32 Output Behavior vs. Magnetic Field Diagrams

32.1 Output Behavior vs. Magnetic Field - Omnipolar

Characteristics	Conditions	Output
South Pole	$B < B_{OPS}$ $0 > B > B_{RPS}$	Low (ON) High (OFF)
North Pole	$B > B_{OPN}$ $0 < B < B_{RPN}$	Low (ON) High (OFF)

32.2 Output Behavior vs. Magnetic Field - Bipolar

Characteristics	Conditions	Output
South Pole	$B < B_{OPS}$	Low (ON)
North Pole	$B > B_{RPN}$	High (OFF)

33TMR Sensor & Switch Packaging

33.1 SOT-23-3 Tape & Reel Packaging

Standard packaging is Tape & Reel containing 3,000 pieces. MSL Rating is 1.

34 Suggested Pb-Free Reflow Profile

Notes:

1. Fully compatible with standard no-lead solder profile, 260 °C for 30 seconds max (3 cycles max).
2. Profile shown as example. Users are advised to develop their own board-level profile.
3. Suggested Pb-free reflow profile derived from IPC/JEDEC J-STD-020E.
4. Temperature tolerance: +0 °C, as measured at any point on the package or leads
5. MSL rating of 1 (SOT-23-3 only) compatible with J-STD-020 or equivalent.
6. MSL rating of 3 (LGA-4 only) compatible with J-STD-020 or equivalent.
7. All temperatures refer to the center of the package, measured on the package body surface that is facing up during assembly reflow (e.g., live-bug). If parts are reflowed in other than the normal live bug assembly reflow orientation (i.e., dead-bug), T_p shall be within ± 2 °C of the live bug T_p and still meet the T_c requirements, otherwise, the profile shall be adjusted to achieve the latter. To accurately measure actual peak package body temperatures, refer to JEP140 for recommended thermocouple use.
8. Reflow profiles in this document are for classification/preconditioning and are not meant to specify board assembly profiles. Actual board assembly profiles should be developed based on specific process needs and board designs and should not exceed the parameters in this table.

35 Suggested Solder Pad Layout

35.1 SOT -23-3 Solder Pad Layout

35.2 LGA-4 Solder Pad Layout

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
