

Evaluating the **AD5141** Digital Potentiometer

FEATURES

- Full featured evaluation board in conjunction with low voltage digiPOT motherboard (EVAL-MB-LV-SDZ)
- Various test circuits
- Various ac/dc input signals
- PC control via a separately purchased system demonstration platform (SDP-B or SDP-S)
- PC software for control

PACKAGE CONTENTS

- EVAL-AD5141DBZ** board
- EVAL-MB-LV-SDZ** motherboard
- CD that includes

- Self-installing software that allows users to control the board and exercise all functions of the device
- Electronic version of the **AD5141** data sheet
- Electronic version of the **UG-473** user guide

GENERAL DESCRIPTION

This user guide describes the evaluation board for evaluating the **AD5141**—a quad-channel, 256-position, nonvolatile memory, digital potentiometer. With versatile programmability, the **AD5141** allows multiple modes of operation, including read/write access in the RDAC and EEMEM registers, increment/decrement of resistance, resistance changes in ± 6 dB scales, wiper setting read-back, and extra EEMEM for storing user-defined information, such as memory data for other components or a lookup table.

The **AD5141** supports a dual-supply ± 2.25 V to ± 2.75 V operation and a single-supply 2.3 V to 5.5 V operation, making the device suitable for battery-powered applications and many other applications. In addition, the **AD5141** can be configured as a versatile I²C or SPI serial interface. The **EVAL-AD5141DBZ** can operate in single-supply or dual-supply mode and incorporates an internal power supply from the USB.

Complete specifications for the **AD5141** part can be found in the **AD5141** data sheet, which is available from Analog Devices, Inc., and should be consulted in conjunction with this user guide when using the evaluation board.

REVISION HISTORY

11/12—Revision 0: Initial Version

EVALUATION BOARD HARDWARE

POWER SUPPLIES

The EVAL-MB-LV-SDZ motherboard supports using single and dual power supplies.

The [EVAL-AD5141DBZ](#) evaluation board can be powered either from the SDP port or externally by the J1 and J2 connectors, as described in Table 1.

All supplies are decoupled to ground using 10 μ F tantalum and 0.1 μ F ceramic capacitors.

Table 1. Maximum and Minimum Voltages of the Connectors

Connector No.	Label	Voltage
J1-1	VDD	Analog positive power supply, V_{DD} . Single supply from 2.3 V to 5.5 V. Dual supply from 2.25 V to 2.75 V.
J1-2	AGND	Analog ground.
J1-3	VSS	Analog negative power supply, V_{SS} . Dual supply from -2.25 V to -2.75 V.
J2-1	VLOGIC	Digital supply, from 1.8 V to V_{DD} .
J2-2	DGND	Digital ground.

Table 3. Link Functions

Link No.	Power Supply	Options
A5	V_{LOGIC}	This link selects one of the following as the digital supply: +3V3 (3.3 V from SDP). VLOGIC EXT (external supply from the J2 connector).
A11	V_{DD}	This link selects one of the following as the positive power supply: +5 V (5 V from SDP). 3V3 (3.3 V from SDP). VDD (external supply from the J1 connector).
A12	V_{SS}	This link selects one of the following as the negative power supply: AGND. EXTVSS (external supply from the J1 connector).

Link Options

Several link and switch options are incorporated in the EVAL-MB-LV-SDZ motherboard and should be set up before using the board. Table 2 describes the positions of the links to control the evaluation board via the SDP board using a PC. The functions of these link options are described in detail in Table 3 through Table 11.

Table 2. Link Options Setup for SDP Control (Default)

Link No.	Option
A5	+3V3
A11	3.3 V
A12	AGND

Linear Gain Setting Mode

The linear gain setting mode pin can be controlled directly by Jumper A5. If the jumper is placed in Position A, the AD5141 powers up in potentiometer mode, and the linear gain setting mode can be controlled by software. If the jumper is placed in Position B, the part powers up in linear gain setting mode, loading independent values for each resistor string— R_{AW} and R_{WB} . The jumper cannot be placed in potentiometer mode again unless the jumper is manually placed in Position A.

DIGITAL INTERFACE

The EVAL-AD5141DBZ can be configured as an I²C or SPI digital interface, depending on the position in the A2 jumper (see Table 4).

Table 4. Interface Selection

A2 Jumper Position	Digital Interface
A	SPI
B	I ² C

If the part is configured in I²C mode, the A3 and A4 jumpers select the I²C address (see Table 5).

Table 5. I²C Address Selection

A3 Jumper Position	A4 Jumper Position	Address
A	A	0101111
A	B	0100011
B	A	0101100
B	B	0100000

TEST CIRCUITS

The EVAL-AD5141DBZ and EVAL-MB-LV-SDZ incorporate several test circuits to evaluate the performance of the AD5141.

DAC

The digiPOT can be operated as a digital-to-analog converter (DAC), as shown in Figure 2. Table 6 and Figure 7 describe the options available for the voltage references.

The output voltage is defined in Equation 1.

$$V_{OUT} = (V_A - V_B) \times \frac{RDAC1}{256} \tag{1}$$

where:

RDAC1 is the code loaded in the RDAC1 register.

V_A is the voltage applied to the A terminal (A9 link).

V_B is the voltage applied to the B terminal (A10 link).

However, by using the R34 and R35 external resistors, the user can reduce the voltage of the voltage references. In this case, use the A1 and B1 test points to measure the voltage applied to the A and B terminals and to recalculate V_A and V_B in Equation 1.

Table 6. DAC Voltage References Motherboard Links

Terminal	Link	Options	Description
A1	A9	AC+ VDD	Connects Terminal A1 to V _{DD} /2 Connects Terminal A1 to V _{DD}
W1	BUF-W1		Connects Terminal W1 to an output buffer
B1	A10	BIAS VSS AGND	Connects Terminal B1 to V _{DD} /2 Connects Terminal B1 to V _{SS} Connects Terminal B1 to analog ground

Table 7. DAC Voltage References Daughter Board Links

Link	Options	Description
A6	B	Connects Terminal A to A1
A7	B	Connects Terminal W to W1
A8	B	Connects Terminal B to B1
A1	IN	Closes feedback loop of second op amp in the AD8618

Figure 2. DAC

11010-002

AC Signal Attenuation

The RDAC can be used to attenuate an ac signal, which must be provided externally using the AC_INPUT connector, as shown in Figure 3.

Depending on the voltage supply rails and the dc offset voltage of the ac signal, various configurations can be used as described in Table 8 and Table 9.

Table 8. AC Signal Attenuation Daughter Board Links

Link	Options	Description
A6	B	Connects Terminal A to A1
A7	B	Connects Terminal W to W1
A8	B	Connects Terminal B to B1
A1	IN	Closes feedback loop of second op amp in the AD8618

The signal attenuation is defined in Equation 2.

$$Attenuation (dB) = 20 \times \log \left(\frac{R_{WB1} + R_W}{R_{AB}} \right) \quad (2)$$

where:

R_W is the wiper resistance.

R_{AB} is the end-to-end resistance value.

R_{WB1} is the resistor between the W1 and B1 terminals.

Table 9. AC Signal Attenuation Link Motherboard Links

Voltage Supply	Maximum AC Signal Amplitude	Link	Options	Conditions
Single	V_{DD}	A9	AC+	No dc offset voltage; the ac signal is outside the voltage supply rails due to the dc offset voltage; or the dc offset voltage $\neq V_{DD}/2$. ¹
			AC	All other conditions.
		A10	BIAS	Use in conjunction with the AC+ link.
Dual	V_{DD}/V_{SS}	A9	GND	All other conditions.
			AC	The ac signal is outside the voltage supply rails due to the dc offset voltage; the dc offset voltage $\neq 0 V$. ¹
		A10	VSS	Use in conjunction with the AC+ link.

¹ Recommended to ensure optimal total harmonic distortion (THD) performance.

Figure 3. AC Signal Attenuator

11010-003

Signal Amplifier

The RDAC can be operated as an inverting or noninverting signal amplifier supporting linear or pseudologarithmic gains. Table 10 and Table 11 show the available configurations.

The noninverting amplifier with linear gain is shown in Figure 4, and the gain is defined in Equation 3.

$$G = 1 + \frac{R_{WB}}{R_{AW}} \tag{3}$$

where:

R_{WB} is the code loaded for the R_{WB} resistance.
 R_{AW} is the code loaded for the R_{AW} resistance.

Figure 4. Linear Noninverting Amplifier

R43 and R42 can be used to set the maximum and minimum gain limits.

The noninverting amplifier with pseudologarithmic gain is shown in Figure 5, and the gain is defined in Equation 4.

$$G = 1 + \frac{RDAC}{256 - RDAC} \tag{4}$$

where:

$RDAC$ is the code loaded in the RDAC.

Figure 5. Pseudologarithmic Noninverting Amplifier

R43 and R42 can be used to set the maximum and minimum gain limits.

The inverting amplifier with linear gain is shown in Figure 6, and the gain is defined in Equation 5.

Note that the input signal, V_{IN} , must be negative.

$$G = -\frac{R_{WB}}{R_{AW}} \tag{5}$$

where:

R_{WB} is the code loaded for the R_{WB} resistance.
 R_{AW} is the code loaded for the R_{AW} resistance.

Figure 6. Linear Inverting Amplifier

R43 and R42 can be used to set the maximum and minimum gain limits.

Table 10. Amplifier Selection Daughter Board Link Options

Link	Options	Description
A6	A	Connects Terminal A to A2
A7	A	Connects Terminal W to W2
A8	A	Connects Terminal B to B2
A1	OUT	Open short circuit for the AD8618

The inverting amplifier with pseudologarithmic gain is shown in Figure 7, and the gain is defined in Equation 6.

$$G = -\frac{RDAC}{256 - RDAC} \tag{6}$$

where:

$RDAC$ is the code loaded in the RDAC.

Figure 7. Pseudologarithmic Inverting Amplifier

R43 and R42 can be used to set the maximum and minimum gain limits.

Table 11. Amplifier Selection Motherboard Link Options

Amplifier	Gain	Linear Setting Gain Mode Enabled	Link	Label
Noninverting	Linear	Yes	A7 A6 A8	LIN N-INV N-INV
	Pseudologarithmic	No	A7 A6 A8	LOG N-INV N-INV
Inverting	Linear	Yes	A7 A6 A8	LIN INV INV
	Pseudologarithmic	No	A7 A6 A8	LOG INV INV

EVALUATION BOARD SOFTWARE

INSTALLING THE SOFTWARE

The [EVAL-AD5141DBZ](#) kit includes a CD containing the evaluation board software. The software is compatible with Windows® XP, Windows Vista, and Windows 7 (both 32 bits and 64 bits).

Install the software before connecting the [SDP board](#) to the USB port of the PC to ensure that the SDP board is recognized when it is connected to the PC.

To install the software,

1. Start the Windows operating system and insert the CD into the CD-ROM drive.
2. The installation software opens automatically. If it does not open automatically, run the **setup.exe** file from the CD.
3. After the installation is complete, power up the evaluation board as described in the Power Supplies section.
4. Connect the [EVAL-AD5141DBZ](#) and EVAL-MB-LV-SDZ to the SDP board, and then connect the SDP board to the PC using the USB cable included with the SDP board.
5. When the software detects the evaluation board, follow the instructions that appear to finalize the installation.

To run the program, do the following:

1. Click **Start > All Programs > Analog Devices > AD5141 > AD5141 Eval Board**. To uninstall the program, click

Start > Control Panel > Add or Remove Programs > AD5141 Eval Board.

2. If the SDP board is not connected to the USB port when the software is launched, a connectivity error displays (see Figure 8). Simply connect the evaluation board to the USB port of the PC, wait a few seconds, click **Rescan**, and follow the instructions.

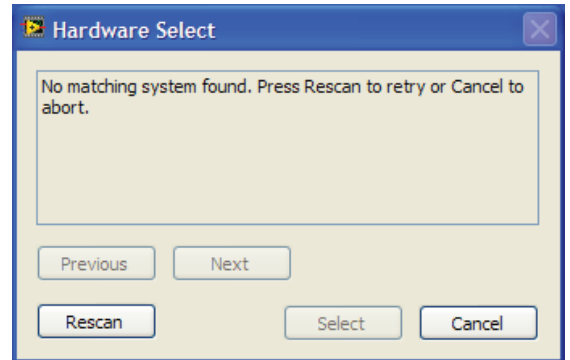

Figure 8. Pop-Up Window Error

The main window of the [EVAL-AD5141DBZ](#) software then opens, as shown in Figure 9.

EVAL-AD5141DBZ UI Application

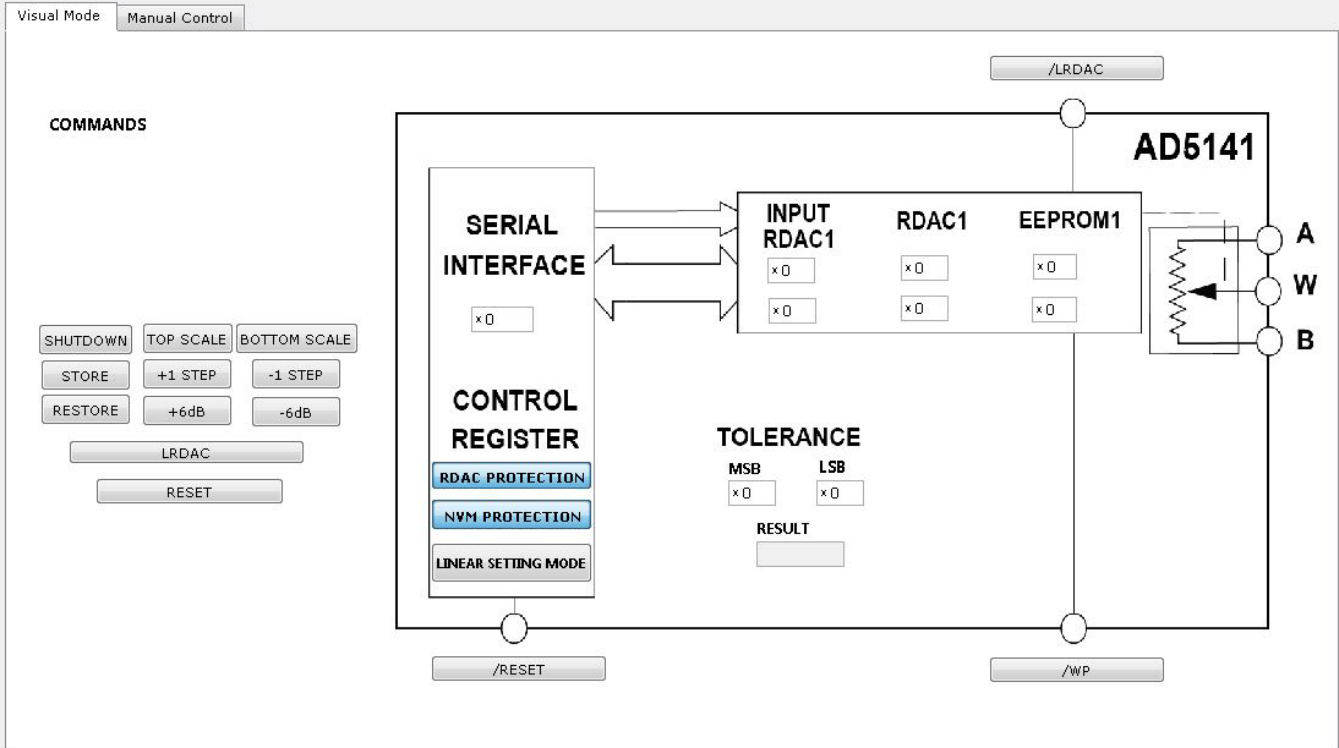

Figure 9. EVAL-AD5141DBZ Software Main Window

11010420

SOFTWARE OPERATION

The main window of the [EVAL-AD5141DBZ](#) software has two tabs, **Visual Mode** and **Manual Control**.

Visual Mode

The **Visual Mode** tab is divided into the following sections: **ALL CHANNELS COMMANDS**, **INDIVIDUAL CHANNEL COMMANDS**, and a block diagram that contains boxes for changing the control register values and buttons and for controlling the hardware pins.

The **ALL CHANNELS COMMANDS** section allows you to send quick commands directly to the [AD5141](#).

The **INDIVIDUAL CHANNEL COMMANDS** section allows you to send quick commands to only specific channels of the [AD5141](#).

The block diagram allows you to update the control register status. Each register value can be easily updated by changing the

value in its respective block within the diagram. In addition, buttons are available that allow you to change the level of some hardware pins.

Manual Mode

The **Manual Mode** tab, as shown in Figure 10, allows you to customize an I²C data-word by manually switching the scroll bars from 0 to 1 or from 1 to 0, as desired, and then clicking **SEND DATA**.

NOTES

I²C refers to a communications protocol originally developed by Philips Semiconductors (now NXP Semiconductors).

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
