

Low-Voltage, Dual SPDT, Audio Clickless Switches with Negative Rail Capability

General Description

The MAX4762–MAX4764/MAX4764A/MAX4765 dual SPDT (single-pole/double-throw) switches feature negative signal capability that allows signals below ground to pass through without distortion. These analog switches operate from a single +1.8V to +5.5V supply and have low 0.6Ω on-resistance, making them ideal for switching audio signals.

The MAX4763/MAX4765 include a comparator that can be used for headphone detection or a mute/send key function. The MAX4764/MAX4764A/MAX4765 have an internal shunt switch to automatically discharge any capacitance at the NO and NC connection points. This reduces click-and-pop sounds that occur when switching audio signals between precharged points.

These SPDT switches are available in space-saving μMAX®, TDFN, thin QFN, and UCSP™ packages and operate over the -40°C to +85°C extended temperature range.

Applications

Cell Phones
PDAs and Handheld Devices
Notebook Computers

Features

- ◆ Distortion-Free Negative Signal Throughput Down to $V_{CC} - 5.5V$
- ◆ Comparator for Headphone or Mute Detection (MAX4763/MAX4765)
- ◆ Internal Shunt Resistor Reduces Click/Pop (MAX4764/MAX4764A/MAX4765)
- ◆ Low On-Resistance (R_{ON})
0.6Ω at +2.7V Supply
- ◆ 0.25Ω On-Resistance Flatness
- ◆ 0.05Ω On-Resistance Matching
- ◆ +1.8V to +5.5V Supply Voltage
- ◆ -70dB Crosstalk (100kHz)
- ◆ -65dB Off-Isolation (100kHz)
- ◆ 0.01% Total Harmonic Distortion
- ◆ Available in μMAX, TDFN, Thin QFN, and UCSP Packages

Low-Voltage, Dual SPDT, Audio Clickless Switches with Negative Rail Capability

Figure 1. Typical Operating Circuit

Detailed Description

The MAX4762-MAX4764/MAX4764A/MAX4765 are low on-resistance, low-voltage, dual SPDT analog switches that operate from a +1.8V to +5.5V supply and are fully specified for nominal 3.0V applications. The devices feature a negative signal capability that allows signals below ground to pass through without distortion and have break-before-make switching.

The MAX4763/MAX4765 feature a comparator that can be used for headphone or mute detection. The comparator threshold is internally generated to be approximately $1/3$ of V_{CC} . The MAX4764/MAX4764A/MAX4765 feature an internal shunt switch to discharge any capacitance at the NO and NC connection points. This reduces the click-and-pop sounds that occur when switching audio signals.

Applications Information

Digital Control Inputs

The MAX4762-MAX4764/MAX4764A/MAX4765 logic inputs accept up to +5.5V, regardless of supply voltage. For example, with a +3.3V supply, IN_{-} can be driven low to GND and high to +5.5V allowing for mixing of logic levels in a system. Driving IN_{-} rail-to-rail minimizes power consumption. For a +1.8V supply voltage, the logic thresholds are 0.5V (low) and 1.4V (high); for a +5V supply voltage, the logic thresholds are 0.8V (low) and 2.0V (high).

Analog Signal Levels

The on-resistance of the MAX4762-MAX4764/MAX4764A/MAX4765 changes very little for analog input signals across the entire supply voltage range (see the *Typical Operating Characteristics*). The switches are bidirectional, so the NO_{-} , NC_{-} , and COM_{-} pins can be either inputs or outputs.

The MAX4762-MAX4764/MAX4764A/MAX4765 pass signals as low as $V_{CC} - 5.5V$, including signals below ground with minimal distortion.

Comparator (MAX4763/MAX4765)

The MAX4763/MAX4765 include a comparator that can be used for mute and headphone detection functions. The positive terminal of the comparator is internally set to $V_{CC} / 3$. When the negative terminal (CMP-) is below the threshold, the comparator output (CMPO) is a logic high. When CMP- rises above $V_{CC} / 3$, CMPO is a logic low.

The comparator threshold of $V_{CC} / 3$ allows for detection of headphones because headphone audio signals are typically biased to $V_{CC} / 2$.

Shunt Switch (MAX4764/MAX4764A/MAX4765)

The 100 Ω shunt switches on the MAX4764/MAX4764A/MAX4765 automatically discharge any capacitance at the NC_{-} or NO_{-} terminals when they are unconnected to COM_{-} . This reduces audible click-and-pop sounds that occur when switching between audio sources.

Audible clicks and pops are caused when a step DC voltage is switched into the speaker. By automatically discharging the side that is not connected, any residual DC voltage is removed, thereby reducing the clicks and pops.

Power-Supply Sequencing and Overvoltage Protection

Caution: Do not exceed the absolute maximum ratings since stresses beyond the listed ratings may cause permanent damage to the device.

Proper power-supply sequencing is recommended for all CMOS devices. Always apply V_{CC} before applying analog signals, especially if the analog signal is not current-limited.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
