

NB6N14S

3.3 V 1:4 AnyLevel™ Differential Input to LVDS Fanout Buffer/Translator

The NB6N14S is a differential 1:4 Clock or Data Receiver and will accept AnyLevel™ differential input signals: LVPECL, CML or LVDS. These signals will be translated to LVDS and four identical copies of Clock or Data will be distributed, operating up to 2.0 GHz or 2.5 Gb/s, respectively. As such, the NB6N14S is ideal for SONET, GigE, Fiber Channel, Backplane and other Clock or Data distribution applications.

The NB6N14S has a wide input common mode range from GND + 50 mV to V_{CC} - 50 mV. Combined with the 50 Ω internal termination resistors at the inputs, the NB6N14S is ideal for translating a variety of differential or single-ended Clock or Data signals to 350 mV typical LVDS output levels.

The NB6N14S is offered in a small 3 mm x 3 mm 16-QFN package. Application notes, models, and support documentation are available at www.onsemi.com.

The NB6N14S is a member of the ECLinPS MAX™ family of high performance products.

-	EP	-	The Exposed Pad (EP) on the QFN-16 package bottom is thermally connected to the die for improved heat transfer out of package. The exposed pad must be attached to a heat-sinking conduit. The pad is not electrically connected to the die, but is recommended to be electrically and thermally connected to GND on the PC board.

2. In the differential configuration, when the input termination pin (VT) is connected to a termination voltage or left open, and if no signal is applied on IN/IN̄ inputs, then the device will be susceptible to self-oscillation.
