1 - The solder paste shall be printed in a thickness of 150 to 200µm.
2 - The SIR test of the solder paste shall be done（Based on JIS-Z-3284）
3 - IR reflow Pb Free Process suggestin profile (Based on J-STD-020-C):

Rapid heating, partial heating or rapid cooling will easily cause defect of the component. So preheating and gradual cooling process is suggested. IR soldering has the highest yields due to controlled heating rates and solder liquidus times. Make sure that the element is not subjected to a thermal gradient steeper than 3 degrees per second. 2 degrees per second is the ideal gradient. During the soldering process, pre- heating to within 175 degrees of the solders peak temperature is essential to minimize thermal shock.

Soldering recommend paste is Sn 96.5/Ag 3.5

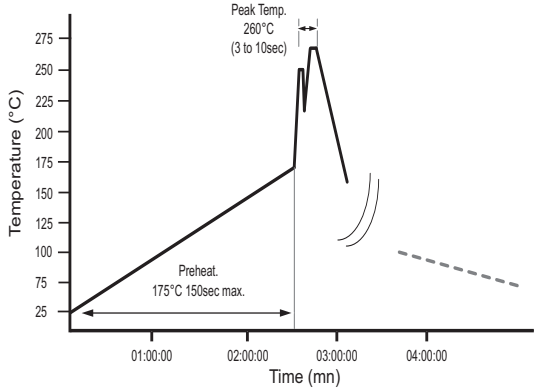

- Preheat
  1.The temperature rising speed is suggested to be 2~3℃/s.
  2.Appropriate preheat time will be from 60 to 120 seconds.
  3.Temp. maintain at 175 +/-25℃ 120 seconds.
- Heating
  1.Careful about sudden rise in temperature as it may worsen the solder ability.
  2.Set the peak temperature in 235℃ 10-20s or 260℃ 3-10s.
- Cooling
  1.Ramp down rate 6℃/s max.

※Perform adequate test in advance as the reflow temperature profile will vary according to the conditions of the manufacturing process, and the specification of the reflow furnace

4 - Wave Soldering Process

Ramp-up rate 3℃/s max.
Temp. maintain at 175 +/-25℃ 180 seconds max.
Peak temperature 260℃ 3-10s.
Ramp down rate 6℃/s max.
to thermal shock, a preheat is recommended in the soldering process. and the peak temperature should be under controlled rigidly in the solder process.

5 - Hand Soldering Process
Preheating 150℃
Temperature of soldering iron tip 380℃ max. 3 to 5 sec
The Varistorrs shall be cooled gradually at room ambient temperature

6 - Ultrasonic cleaning
For preventing failures or damages. Frequency 29MHz max - radied Power 20W/l max - Period 5mn max

D Rollenspezifikation / tape and reel specification :

1 - Carrier tape and transparent cover tape should be heat-sealed to carry the products, and the reel should be used to reel the carrier tape.
2 - The adhesion of the heat-sealed cover tape shall be 40 + 20/ - 15grams.
3 - Both the head and the end portion of the taping shall be empty for reel package and SMT auto-pickup machine. And a normal paper tape shall be conected in the head of taping for the operator to handle.
