

300-MHz to 4-GHz Quadrature Modulator

Check for Samples: [TRF37T05](#)

FEATURES

- **High Linearity:**
 - **Output IP3: 30 dBm at 1850 MHz**
- **Low Output Noise Floor: –160 dBm/Hz**
- **78-dBc Single-Carrier WCDMA ACPR at –10-dBm Channel Power**
- **Unadjusted Carrier Suppression: –40 dBm**
- **Unadjusted Sideband Suppression: –45 dBc**
- **Single Supply: 3.3-V Operation**
- **1-bit Gain Step Control**
- **Fast Power-Up/Power-Down**

APPLICATIONS

- **Cellular Base Station Transmitter**
- **CDMA: IS95, UMTS, CDMA2000, TD-SCDMA**
- **LTE (Long Term Evolution), TD-LTE**
- **TDMA: GSM, EDGE/UWC-136**
- **Multicarrier GSM (MC-GSM)**
- **Wireless MAN Wideband Transceivers**

DESCRIPTION

The TRF37T05 is a low-noise direct quadrature modulator with exceptional TDD performance. It is capable of converting complex modulated signals from baseband or IF directly up to RF. The TRF37T05 is a high-performance, superior-linearity device that is ideal to up-convert to RF frequencies of 300 MHz ⁽¹⁾ through 4 GHz. The modulator is implemented as a double-balanced mixer.

The RF output block consists of a differential-to-single-ended converter that is capable of driving a single-ended 50-Ω load. The TRF37T05 requires a 0.25-V common-mode voltage for optimum linearity performance. The TRF37T05 also provides a fast power-down pin that can be used to reduce power dissipation while maintaining optimized adjusted carrier feed-through performance in TDD applications.

The TRF37T05 is available in an RGE-24 VQFN package.

(1) Appropriate matching network is required for optimal performance at 300 MHz.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PowerPAD is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the device product folder at www.ti.com

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

Over operating free-air temperature range (unless otherwise noted).

		MIN	MAX	UNIT
Supply voltage range ⁽²⁾		-0.3	6	V
Digital I/O voltage range		-0.3	V _{CC} +0.5	V
Operating virtual junction temperature range, T _J		-40	150	°C
Operating ambient temperature range, T _A		-40	85	°C
Storage temperature range, T _{stg}		-65	150	°C
ESD ratings	Human body model, HBM		4000	V
	Charged device model, CDM		250	V
	Machine model, MM		200	V

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltage values are with respect to network ground terminal.

RECOMMENDED OPERATING CONDITIONS

Over operating free-air temperature range (unless otherwise noted).

		MIN	NOM	MAX	UNIT
V _{CC}	Power-supply voltage	3.15	3.3	3.6	V

THERMAL INFORMATION

THERMAL METRIC		TRF37T05	UNITS
		RGE (VQFN)	
		24 PINS	
θ _{JA}	Junction-to-ambient thermal resistance	38.4	°C/W
θ _{JCtop}	Junction-to-case (top) thermal resistance	42.5	
θ _{JB}	Junction-to-board thermal resistance	16.6	
ψ _{JT}	Junction-to-top characterization parameter	0.9	
ψ _{JB}	Junction-to-board characterization parameter	16.6	
θ _{JCbot}	Junction-to-case (bottom) thermal resistance	6.6	

ELECTRICAL CHARACTERISTICS: GENERAL

 Over recommended operating conditions; at power supply = 3.3 V and $T_A = 25^\circ\text{C}$, unless otherwise noted.

PARAMETERS		TEST CONDITIONS	MIN	TYP	MAX	UNIT
DC PARAMETERS						
I_{CC}	Total supply current	$T_A = 25^\circ\text{C}$, device on (PD = low)		306		mA
		$T_A = 25^\circ\text{C}$, device off (PD = high)		146		mA
LO INPUT						
f_{LO}	LO low frequency			300		MHz
	LO high frequency			4000		MHz
	LO input power		-10	0	+15	dBm
BASEBAND INPUTS						
V_{CM}	I and Q input dc common-mode voltage			0.25	0.5	V
BW	1-dB input frequency bandwidth			1000		MHz
Z_I	Input impedance	Resistance		8		k Ω
		Parallel capacitance		4.6		pF
POWER ON/OFF						
	Turn on time	PD = low to 90% final output power		0.2		μs
	Turn off time	PD = high to initial output power -30 dB		0.2		μs
DIGITAL INTERFACE						
V_{IH}	PD high-level input voltage		2			V
V_{IL}	PD low-level input voltage				0.8	V

ELECTRICAL CHARACTERISTICS

Over recommended operating conditions; at power supply = 3.3 V, $T_A = 25^\circ\text{C}$, $V_{CM} = 0.25\text{ V}$; LO Power = 0 dBm, single-ended (LOP); GC set low, $V_{IN\ BB} = 1\text{ V}_{PP}$ (diff) in quadrature, and $f_{BB} = 5.5\text{ MHz}$, standard broadband output matching circuit, unless otherwise noted.

PARAMETERS		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$f_{LO} = 400\text{ MHz}$						
G	Voltage gain	Output RMS voltage over input I (or Q) RMS voltage, GC set low		-4.7		dB
		Output RMS voltage over input I (or Q) RMS voltage, GC set high		-1.9		dB
P _{OUT}	Output power	GC set low		-0.7		dBm
		GC set high		2.1		dBm
P1dB	Output compression point	GC set low		8.5		dBm
		GC set high		9.1		dBm
IP3	Output IP3	$f_{BB1} = 4.5\text{ MHz}$; $f_{BB2} = 5.5\text{ MHz}$; GC set low		26		dBm
		$f_{BB1} = 4.5\text{ MHz}$; $f_{BB2} = 5.5\text{ MHz}$; GC set high		25.4		dBm
IP2	Output IP2	Measured at $f_{LO} + (f_{BB1} \pm f_{BB2})$, GC set low		60.2		dBm
		Measured at $f_{LO} + (f_{BB1} \pm f_{BB2})$, GC set high		61.9		dBm
SBS	Unadjusted sideband suppression			-57.4		dBc
CF	Unadjusted carrier feedthrough	Measured at LO frequency		-51.6		dBm
		Measured at 2 x LO		-50		dBm
		Measured at 3 x LO		-49		dBm
	Output noise floor	DC only to BB inputs; 10-MHz offset from LO		-166.7		dBm/Hz
HD2 _{BB}	Baseband harmonics	Measured with $\pm 1\text{-MHz}$ tone at 0.5 V_{PP} each at $f_{LO} \pm (2 \times f_{BB})$		-67		dBc
HD3 _{BB}	Baseband harmonics	Measured with $\pm 1\text{-MHz}$ tone at 0.5 V_{PP} each at $f_{LO} \pm (3 \times f_{BB})$		-64		dBc
$f_{LO} = 750\text{ MHz}$						
G	Voltage gain	Output RMS voltage over input I (or Q) RMS voltage, GC set low		0.2		dB
		Output RMS voltage over input I (or Q) RMS voltage, GC set high		3		dB
P _{OUT}	Output power	GC set low		4.2		dBm
		GC set high		7		dBm
P1dB	Output compression point	GC set low		13.3		dBm
		GC set high		13.9		dBm
IP3	Output IP3	$f_{BB1} = 4.5\text{ MHz}$; $f_{BB2} = 5.5\text{ MHz}$; GC set low		31.5		dBm
		$f_{BB1} = 4.5\text{ MHz}$; $f_{BB2} = 5.5\text{ MHz}$; GC set high		30.8		dBm
IP2	Output IP2	Measured at $f_{LO} + (f_{BB1} \pm f_{BB2})$, GC set low		73.6		dBm
		Measured at $f_{LO} + (f_{BB1} \pm f_{BB2})$, GC set high		80.5		dBm
SBS	Unadjusted sideband suppression			-45.2		dBc
CF	Unadjusted carrier feedthrough	Measured at LO frequency		-45.7		dBm
		Measured at 2 x LO		-46		dBm
		Measured at 3 x LO		-53.5		dBm
	Output noise floor	DC only to BB inputs; 10-MHz offset from LO		-159.9		dBm/Hz
HD2 _{BB}	Baseband harmonics	Measured with $\pm 1\text{-MHz}$ tone at 0.5 V_{PP} each at $f_{LO} \pm (2 \times f_{BB})$		-70		dBc
HD3 _{BB}	Baseband harmonics	Measured with $\pm 1\text{-MHz}$ tone at 0.5 V_{PP} each at $f_{LO} \pm (3 \times f_{BB})$		-66		dBc

ELECTRICAL CHARACTERISTICS (continued)

Over recommended operating conditions; at power supply = 3.3 V, $T_A = 25^\circ\text{C}$, $V_{CM} = 0.25\text{ V}$; LO Power = 0 dBm, single-ended (LOP); GC set low, $V_{IN\ BB} = 1\text{ V}_{PP}$ (diff) in quadrature, and $f_{BB} = 5.5\text{ MHz}$, standard broadband output matching circuit, unless otherwise noted.

PARAMETERS		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$f_{LO} = 900\text{ MHz}$						
G	Voltage gain	Output RMS voltage over input I (or Q) RMS voltage, GC set low		0.3		dB
		Output RMS voltage over input I (or Q) RMS voltage, GC set high		3.1		dB
P _{OUT}	Output power	GC set low		4.3		dBm
		GC set high		7.1		dBm
P1dB	Output compression point	GC set low		13.2		dBm
		GC set high		13.7		dBm

APPLICATION INFORMATION

Application Schematic

Figure 65 shows a typical TRF37T05 application schematic.

(1) Pin 1 (PD) and Pin 6 (GC) are internally pulled down.

Figure 65. Typical Application Circuit

Power Supply and Grounding

The TRF37T05 is powered by supplying a nominal 3.3 V to pins 18 and 24. These supplies can be tied together and sourced from a single clean supply. Proper RF bypassing should be placed close to each power supply pin.

Ground pin connections should have at least one ground via close to each ground pin to minimize ground inductance. The PowerPAD™ must be tied to ground, preferably with the recommended ground via pattern to provide a good thermal conduction path to the alternate side of the board and to provide a good RF ground for the device. (Refer to [PCB Design Guidelines](#) for additional information.)

Baseband Inputs

The baseband inputs consist of the in-phase signal (I) and the Quadrature-phase signal (Q). The I and Q lines are differential lines that are driven in quadrature. The nominal drive level is $1-V_{PP}$ differential on each branch.

The baseband lines are nominally biased at $0.25-V_{CM}$ common-mode voltage (V_{CM}); however, the device can operate with a V_{CM} in the range of 0 V to 0.5 V. The baseband input lines are normally terminated in $50\ \Omega$, though it is possible to modify this value if necessary to match to an external filter load impedance requirement.

LO Input

The LO inputs can be driven either single-ended or differentially. There is no significant performance difference between either option with the exception of the sideband suppression. If driven single-ended, either input can be used, but LOP (pin 3) is recommended for best broadband performance of sideband suppression. When driving in single-ended configuration, simply ac-couple the unused port and terminate in 50 Ω . The comparison of the sideband suppression performance is shown in Figure 66 for driving the LO single-ended from either pin and for driving the LO input differentially.

Figure 66. Unadjusted Sideband Suppression (SBS) vs LO Drive Options

RF Output

The RF output must be ac-coupled and can drive a 50- Ω load. The suggested output match provides the best broadband performance across the frequency range of the device. It is possible to modify the output match to optimize performance within a selected band if needed. The optimized matching circuits are to match the RF output impedances to 50 Ω .

Figure 67 shows a slightly better OIP3 performance at the frequency above 1850 MHz with an 0.2-pF matching capacitor.

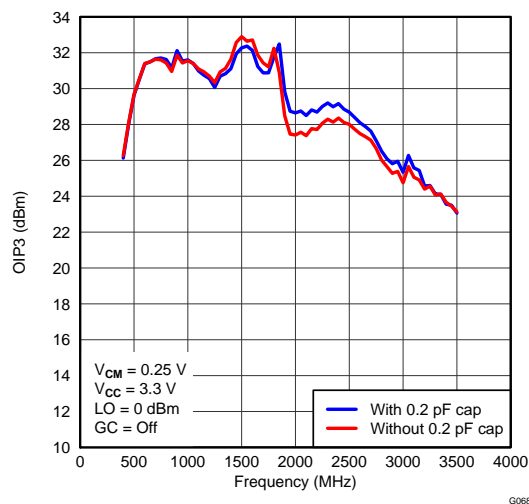

Figure 67. OIP3 with and without a Shunt 0.2-pF Matching Capacitor at the RF Port

350-MHz Operation

A different matching circuit, as shown in Figure 68, could also be applied to improve the performance for the frequency from 300 MHz to 400 MHz.

Figure 68. Matching Components for Operation Centered at 350 MHz

Figure 69 and Figure 70 show a slight improvement in OIP3 performance at 350 MHz with an 0.2-pF matching capacitor.

Figure 69. Output Power with 350-MHz Matching Circuit

Figure 70. OIP3 with 350-MHz Matching Circuit

DAC to Modulator Interface Network

For optimum linearity and dynamic range, a digital-to-analog converter (DAC) can interface directly with the TRF37T05 modulator. It is imperative that the common-mode voltage of the DAC and the modulator baseband inputs be properly maintained. With the proper interface network, the common-mode voltage of the DAC can be translated to the proper common-mode voltage of the modulator. The TRF37T05 common-mode voltage is typically 0.25 V, and is ideally suited to interface with the [DAC3482/3484](#) (DAC348x) family because the common-mode voltages of both devices are the same; there is no translation network required. The interface network is shown in [Figure 71](#).

Figure 71. DAC348x Interface with the TRF37T05 Modulator

The DAC348x requires a load resistor of 25 Ω per branch to maintain its optimum voltage swing of $1-V_{PP}$ differential with a 20-mA max current setting. The load of the DAC is separated into two parallel 50- Ω resistors placed on the input and output side of the low-pass filter. This configuration provides the proper resistive load to the DAC while also providing a convenient 50- Ω source and load termination for the filter.

DAC348x with TRF37T05 Modulator Performance

The combination of the DAC348x driving the TRF37T05 modulator yields excellent system parameters suitable for high-performance applications. As an example, the following sections illustrate the typical modulated adjacent channel power ratio (ACPR) for common telecom standards and bands. These measurements were taken on the [DAC348x evaluation board](#).

WCDMA

The adjacent channel power ratio (ACPR) performance using a single-carrier WCDMA signal in the UMTS band is shown in [Figure 72](#).

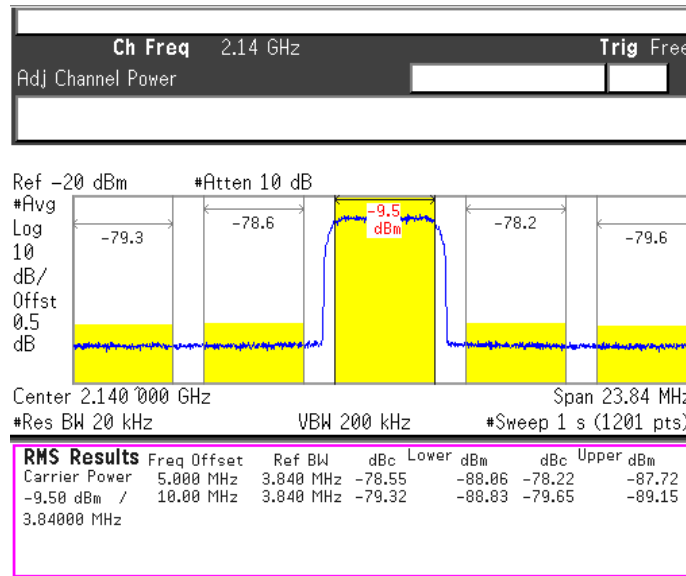

Figure 72. Single-Carrier WCDMA ACPR, IF = 30 MHz, LO Frequency = 2110 MHz

A marginal improvement in OIP3 and output noise performance can be observed by increasing the LO drive power, resulting in slightly improved ACPR performance. The ACPR performance versus LO drive level is plotted in [Figure 73](#) across common frequencies to illustrate the amount of improvement that is possible.

Figure 73. Single-Carrier WCDMA ACPR Performance vs LO Power

LTE

ACPR performance using a 10 MHz LTE signal in the 700-MHz band is shown in [Figure 74](#).

Figure 74. 10 MHz LTE ACPR, IF = 30 MHz, LO Frequency = 718 MHz

MC-GSM

ACPR performance using a four-carrier MC-GSM signal in the 1800-MHz band is shown in [Figure 75](#).

Figure 75. Four-Carrier MC-GSM, IF = 30 MHz ACPR, LO Frequency = 1812 MHz

DEFINITION OF SPECIFICATIONS

Carrier Feedthrough

This specification measures the power of the local oscillator component that is present at the output spectrum of the modulator. The performance depends on the dc offset balance within the baseband input lines. Ideally, if all of the baseband lines were perfectly matched, the carrier (that is, the LO) would be naturally suppressed; however, small dc offset imbalances within the device allow some of the LO component to feed through to the output. This parameter is expressed as an absolute power in dBm, and is independent of the RF output power and the injected LO input power.

It is possible to adjust the baseband dc offset balance to suppress the output carrier component. Devices such as the DAC348x DAC family have dc offset adjustment capabilities specifically for this function. The Adjusted Carrier Feedthrough graphs (see [Figure 33](#) through [Figure 38](#)) optimize the performance at the center of the band at room temperature. Then, with the adjusted dc offset values held constant, the parameter is measured over the frequency band and across the temperature extremes. The typical performance plots provide an indication of how well the adjusted carrier suppression can be maintained over frequency and temperature with only one calibration point.

Sideband Suppression

This specification measures the suppression of the undesired sideband at the output of the modulator relative to the desired sideband. If the amplitude and phase within the I and Q branch of the modulator were perfectly matched, the undesired sideband (or image) would be naturally suppressed. Amplitude and phase imbalance in the I and Q branches result in the increase of the undesired sideband. This parameter is measured in dBc relative to the desired sideband.

It is possible to adjust the relative amplitude and phase balance within the baseband lines to suppress the unwanted sideband. Devices such as the DAC348x DAC family have amplitude and phase adjustment control specifically for this function. The Adjusted Sideband Suppression graphs (refer to [Figure 39](#) through [Figure 44](#)) optimize the performance at the center of the band at room temperature. Then, with the adjusted amplitude and phase values held constant, the parameter is measured over the frequency band and across the temperature extremes. The performance plots provide an indication of how well the adjusted sideband suppression can be maintained over frequency and temperature with only one calibration point.

Output Noise

The output noise specifies the absolute noise power density that is output from the RF_{OUT} pin (pin 16). This parameter is expressed in dBm/Hz. This parameter, in conjunction with the OIP3 specification, indicates the dynamic range of the device. In general, at high output signal levels the performance is limited by the linearity of the device; at low output levels, on the other hand, the performance is limited by noise. As a result of the higher gain and output power of the TRF37T05 compared to earlier devices, it is expected that the noise density is slightly higher as well. With its increased gain and high OIP3 performance, the overall dynamic range of the TRF37T05 is maintained at exceptional levels.

Definition of Terms

A simulated output spectrum with two tones is shown in [Figure 76](#), with definitions of various terms used in this data sheet.

Figure 76. Graphical Illustration of Common Terms

EVALUATION BOARD

Populated RoHS-compliant evaluation boards are available for testing the TRF37T05 as a stand-alone device. Contact your local TI representative for information on ordering these evaluation modules, or see the [TRF37T05 product folder](#) on the TI website. In addition, the TRF37T05 can be evaluated with the DAC348x (quad/dual 16-bit, 1.25GSPS) EVM driving the baseband inputs through a seamless interface at 0.25V common-mode voltage.

PCB Design Guidelines

The TRF37T05 device is fitted with a ground slug on the back of the package that must be soldered to the printed circuit board (PCB) ground with adequate ground vias to ensure a good thermal and electrical connection. The recommended via pattern and ground pad dimensions are shown in [Figure 77](#). The recommended via diameter is 10 mils (0.10 in or 0.25 mm). The ground pins of the device can be directly tied to the ground slug pad for a low-inductance path to ground. Additional ground vias may be added if space allows.

Note: Dimensions are in millimeters (mm).

Figure 77. PCB Ground Via Layout Guide

Decoupling capacitors at each of the supply pins are strongly recommended. The value of these capacitors should be chosen to provide a low-impedance RF path to ground at the frequency of operation. Typically, the value of these capacitors is approximately 10 pF or lower.

The device exhibits symmetry with respect to the quadrature input paths. It is recommended that the PCB layout maintain this symmetry in order to ensure that the quadrature balance of the device is not impaired. The I/Q input traces should be routed as differential pairs and the respective lengths all kept equal to each other. On the RF traces, maintain proper trace widths to keep the characteristic impedance of the RF traces at a nominal 50 Ω .

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TRF37T05IRGER	ACTIVE	VQFN	RGE	24	3000	Green (RoHS & no Sb/Br)	CU NIPDAUAG	Level-2-260C-1 YEAR	-40 to 85	TR37T05 IRGE	Samples
TRF37T05IRGET	ACTIVE	VQFN	RGE	24	250	Green (RoHS & no Sb/Br)	CU NIPDAUAG	Level-2-260C-1 YEAR	-40 to 85	TR37T05 IRGE	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - This drawing is subject to change without notice.
 - Quad Flatpack, No-Leads (QFN) package configuration.
 - The package thermal pad must be soldered to the board for thermal and mechanical performance.
 - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
 - Falls within JEDEC MO-220.

THERMAL PAD MECHANICAL DATA

RGE (S-PVQFN-N24)

PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

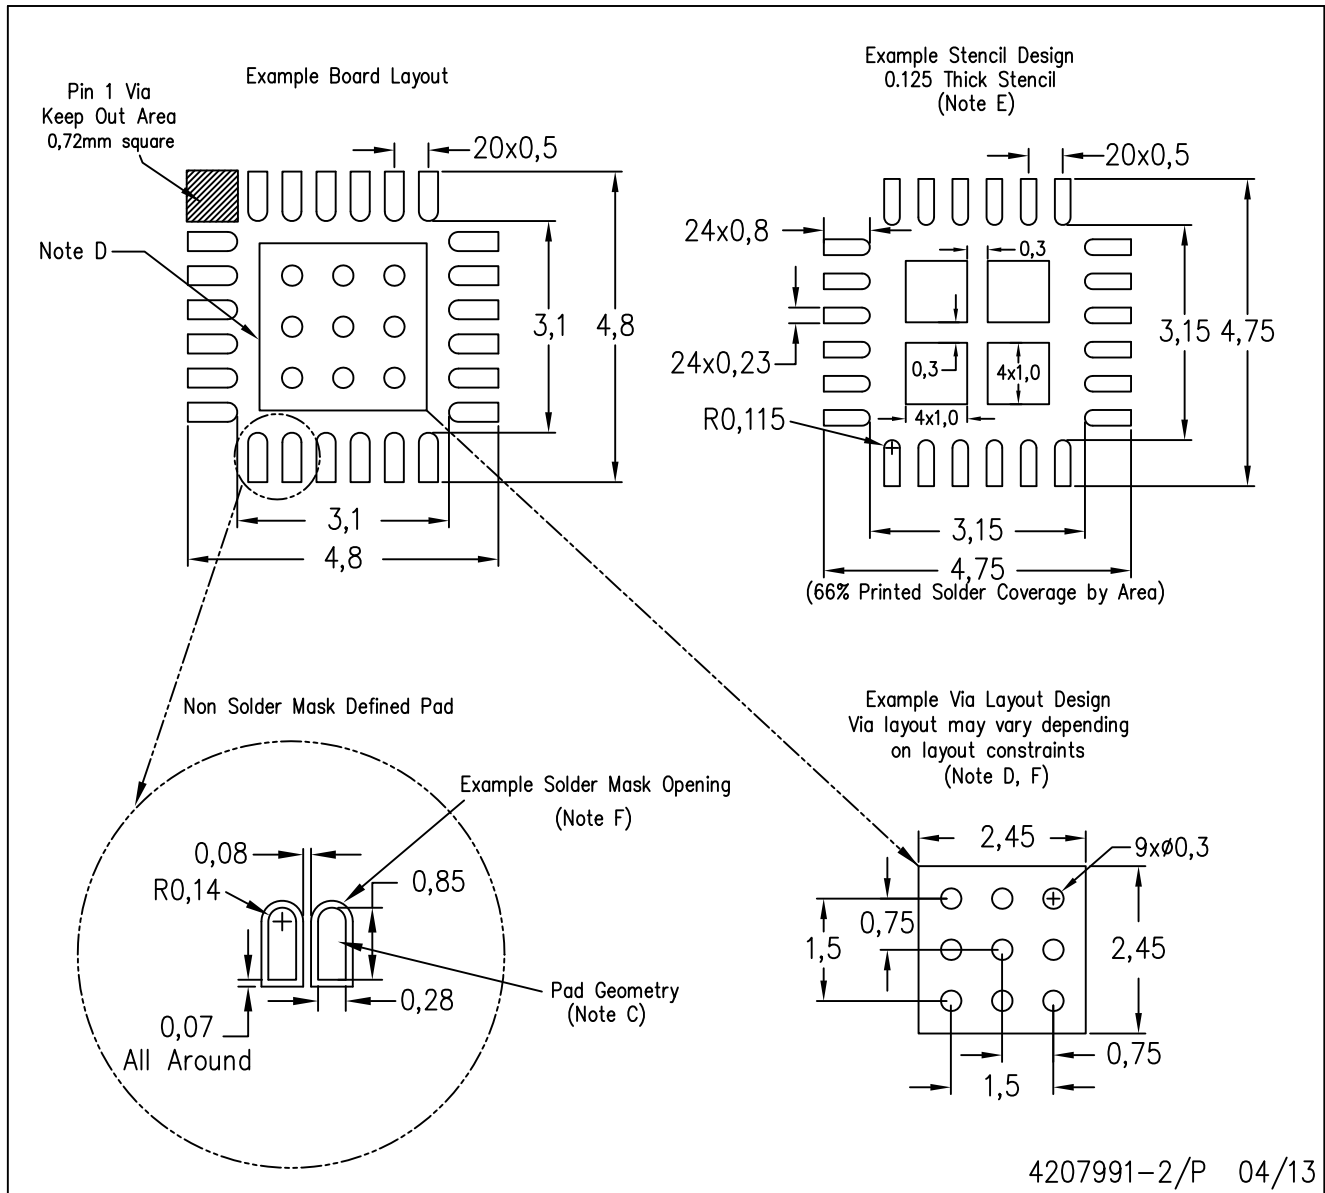

4206344-3/AD 04/13

NOTES: A. All linear dimensions are in millimeters

RGE (S-PVQFN-N24)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-7351 is recommended for alternate designs.
 - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
