

## CLOCK MULTIPLIER WITH DELAY CONTROL AND PHASE ALIGNMENT

### FEATURES

- **Low-Jitter Clock Multiplier:**  $\times 1$ ,  $\times 2$ ,  $\times 4$ ,  $\times 8$
- **Programmable Bidirectional Delay Steps of 1.3 mUI**
- **Output Frequency Range of 25 MHz to 280 MHz**
- **Input Frequency Range of 12.5 MHz to 240 MHz**
- **Low Jitter Generation**
- **Single-Ended REFCLK Input With Adjustable Trigger Level (Works With LVTTTL, HSTL, and LVPECL)**
- **Differential/Single-Ended Output**
- **Output Can Drive LVPECL, LVDS, and LVTTTL**
- **Three Power Operating Modes to Minimize Power**
- **Low Power Consumption (< 190 mW at 280 MHz/3.3 V)**
- **Packaged in a Shrink Small-Outline Package (DBQ)**
- **No External Components Required for PLL**
- **Spread Spectrum Clock Tracking Ability to Reduce EMI (SSC)**

### APPLICATIONS

- **Video Graphics**
- **Gaming Products**
- **Datacom**
- **Telecom**
- **Noise Cancellation Created by FPGAs**

### DESCRIPTION

The CDCF5801 provides clock multiplication from a reference clock (REFCLK) signal with the unique capability to delay or advance the CLKOUT/CLKOUTB with steps of only 1.3 mUI through a phase aligner. For every rising edge on the DLYCTRL pin the CLKOUT is delayed by a 1.3-mUI step size as long as the LEADLAG input detects a low signal at the time of the DLYCTRL rising edge. Similarly for every rising edge on the DLYCTRL pin the CLKOUT is advanced by a 1.3-mUI step size as long as the LEADLAG pin is high during the transition. This unique capability allows the device to phase align (zero delay) between CLKOUT/CLKOUTB and any one other CLK in the system by feeding the clocks that need to be aligned to the DLYCTRL and the LEADLAG pins. Also it provides the capability to program a fixed delay by providing the proper number of edges on the DLYCTRL pin, while strapping the LEADLAG pin to dc high or low. Further possible applications are:

- Aligning the rising edge of the output clock signal to the input clock rising edge
- Avoiding PLL instability in applications that require very long PLL feedback lines
- Isolation of jitter and digital switching noise
- Limitation of jitter in systems with good ppm frequency stability

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

The CDCF5801 provides clock multiplication and division from a reference clock (REFCLK) signal. The device is optimized to have extremely low jitter impact from input to output. The predivider pins MULT[0:1] and post-divider pins P[0:2] provide selection for frequency multiplication and division ratios, generating CLKOUT/CLOUTKB frequencies ranging from 25 MHz to 280 MHz with clock input references (REFCLK) ranging from 12.5 MHz to 240 MHz. See Table 1 for detailed frequency support. The selection of pins MULT[0:1] and P[1:2] determines the multiplication value of 1, 2, 4, or 8. The CDCF5801 offers several power-down/ high-impedance modes, selectable by pins P0, STOPB and PWRDN. Another unique capability of the CDCF5801 is the high sensitivity and wide common-mode range of the clock-input pin REFCLK by varying the voltage on the VDDREF pin. The clock signal outputs CLKOUT and CLKOUTB can be used independently to generate single-ended clock signals. The CLKOUT/CLKOUTB outputs can also be combined to generate a differential output signal suitable for LVDS, LVPECL, or HSTL/SSTL signaling. The CDCF5801 is characterized for operation over free-air temperatures of -40°C to 85°C.

**FUNCTIONAL BLOCK DIAGRAM**

**TERMINAL FUNCTIONS**

TERMINAL		I/O	DESCRIPTION
NAME	NO.		
CLKOUT CLKOUTB	2018	O	Output CLK signal (low-noise CMOS) Complementary output CLK signal (low-noise CMOS)
DLYCTRL	7	I	Every rising edge on this pin delays/advances the CLKOUT/CLKOUTB signal by 1/768 <sup>th</sup> of the CLKOUT/CLKOUTB period (1.3 mUI). (E.g., for a 90-degree delay or advancement one needs to provide 192 rising edges). See Table 3.
GND	5		GND for VDDREF and VDDPD
GNDO	17, 21		GND for the output pins (CLKOUT, CLKOUTB)
GNDP	4		GND for the PLL
GNDPA	8		GND for phase aligner, digital logic, and inputs P[0:2], MULT[0:1], STOPB, PWRDNB
LEADLAG	6	I	Controls whether the output CLK is delayed or advanced relative to REFCLK. See Table 3.
MULT0 MULT1	15 14	I	PLL multiplication factor select. See Table 1. MULT[0:1] = 10: ×16 MULT[0:1] = 11: ×8 MULT[0:1] = 00: ×4 MULT[0:1] = 01: ×2
NC	19		Not connected; leave pin floating or tied to GND.
P0	24	I	Mode control pins (see Table 1) 0 - Normal operation 1 - High-Z outputs and other special settings
P1  P2	23  13	I	Post divider control (see Table 1) P[1:2] = 11: div2 P[1:2] = 10: div4 P[1:2] = 01: div8
PWRDNB	12	I	Active-low power-down state. CLKOUT/CLKOUTB goes low, See Table 2). 0 - IC in power down 1 - Normal operation
REFCLK	2	I	Reference input clock
STOPB	11	I	Active low output disabler, PLL and PA still running, CLKOUT and CLKOUTB goes to a dc value as listed in Table 2. 0 - Outputs disabled 1 - Normal operation
VDDO	16, 22		VDD for the output pin (CLKOUT, CLKOUTB) and power down circuit
VDDP	3		VDD for PLL and input buffer
VDDPA	9		VDD for phase aligner, digital logic, and inputs P[0:2], MULT[0:1], and STOPB
VDDPD	10		Reference voltage for inputs LEADLAG and DLYCTRL
VDDREF	1		Reference voltage for REFCLK

**Table 1. Input-to-Output Settings**

INPUT-TO-OUTPUT MULTIPLICATION-RATIO	INPUT FREQUENCY (MHz)		OUTPUT FREQUENCY (MHz)		PREDIVIDER		POST DIVIDER			NOTE
	FROM	TO	FROM	TO	MULT0	MULT1	P0	P1	P2	
8	12.5	35	100	280	1	0	0	1	1	Normal operation <sup>(1)</sup>
4	12.5	39	50	156	1	0		1	0	
	25	70	100	280	1	1		1	1	
2	12.5	39	25	78	1	0		0	1	
	25	78	50	156	1	1		1	0	
	50	140	100	280	0	0		1	1	
1	25	78	25	78	1	1		0	1	
	50	156	50	156	0	0		1	0	
	100	240	100	240	0	1		1	1	
CLKOUT high-impedance					X	X	1	0	0	Special mode of operation
CLOUTB high-impedance										
CLKOUT = high					X	X		0	1	
CLKOUTB = high										
CLKOUT = P2					X	X		1	X	
CLKOUTB = P2										

(1) There is some overlapping of the input frequency ranges for multiplication ratios of 1, 2, and 4. For example, an input frequency of 30 MHz for a multiplication ratio of four falls within both the 12.5 to 39-MHz range and the 25 to 70-MHz range. For best device operation in a case such as this, always select the input frequency range nearer to the top of the table.

### PLL DIVIDER/MULTIPLIER SELECTION

**Table 2. Power Down Modes**

STATE	PWRDNB	STOPB	CLKOUT and CLKOUTB
Power down	0	X	GND0
Clock stop	1	0	V <sub>O</sub> , STOP
Normal	1	1	See Table 1

**Table 3. Programmable Delay and Phase Alignment**

DLYCTR	NOTE	LEADLAG	CLKOUT and CLKOUTB
Each rising edge+	For every 32 edges, there are one or two edges for which the phase aligner does not update the phase. Therefore, CLKOUT phase is not updated for every 32 <sup>nd</sup> edge. The frequency of the DLYCTRL pin should always be equal to or less than the frequency of the LEADLAG pin.	HI	Advanced by one step: step size: 1/768 of the CLKOUT period (1.3 mUI) at P[1:2] = 11 1/1536 of the CLKOUT period (0.65 mUI) at P[1:2] = 10 1/3072 of the CLKOUT period (0.325 mUI) at P[1:2] = 01
Each rising edge+		LO	Delayed by one step: step size: 1/768 of the CLKOUT period (1.3 mUI) at P[1:2] = 11 1/1536 of the CLKOUT period (0.65 mUI) at P[1:2] = 10 1/3072 of the CLKOUT period (0.325 mUI) at P[1:2] = 01

## ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature (unless otherwise noted)<sup>(1)</sup>

$V_{DDx}$ <sup>(2)</sup>	Supply voltage range	-0.5 V to 4 V
	Voltage range at any output terminal	-0.5 V to $V_{DD} + 0.5$ V
	Voltage range at any input terminal	-0.5 V to $V_{DD} + 0.5$ V
$T_{stg}$	Storage temperature range	-65°C to 150°C
	Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

- (1) Stresses beyond those listed under „absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under „recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to the GND terminals.

### POWER DISSIPATION RATING TABLE

PACK- AGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	DERATING FAC- TOR <sup>(1)</sup> ABOVE $T_A$ = 25°C	$T_A = 85^\circ\text{C}$ POWER RATING
DBQ	830 mW	8.3 mW/°C	332 mW

- (1) This is the inverse of the junction-to-ambient thermal resistance when board-mounted and with no air flow.

## RECOMMENDED OPERATING CONDITIONS

		MIN	NOM	MAX	UNIT
VDDP, VDDPA, VDDO	Supply voltage	3	3.3	3.6	V
$V_{IH}$ (CMOS)	High-level input voltage	0.7 VDD			V
$V_{IL}$ (CMOS)	Low-level input voltage			0.3 VDD	V
$V_{IL}$ (DLYCTRL, LEADLAG)	Input signal low voltage		$\frac{VDDPD}{2} - 0.2$		V
$V_{IH}$ (DLYCTRL, LEADLAG)	Input signal high voltage		$\frac{VDDPD}{2} + 0.2$		V
(VDDPD)	Input reference voltage for DLYCNTRL and LEADLAG	1.2		VDD	V
$I_{OH}$	High-level output current			-16	mA
$I_{OL}$	Low-level output current			16	mA
(VDDREF) (see Application section)	Input reference voltage for REFCLK	1.2		VDD	V
$V_{IL}$ (see Application section)	REFCLK input low voltage		$\frac{VDDREF}{2} - 0.2$		V
$V_{IH}$ (see Application section)	REFCLK input high voltage		$\frac{VDDREF}{2} + 0.2$		V
$T_A$	Operating free-air temperature	-40		85	°C

## TIMING REQUIREMENTS

	PARAMETER	MIN	MAX	UNIT
$F_{mod}$	Input frequency of modulation, (if driven by SSC CLKIN)		33	kHz
	Modulation index, nonlinear maximum 0.5%		0.6%	
SR	Input slew rate	1	4	V/ns
	Input duty cycle on REFCLK	40%	60%	
	Input frequency on REFCLK	12.5	240	MHz
	Output frequency on CLKOUT and CLKOUTB	25	280	MHz
	Allowable frequency on DLYCTRL		240	MHz

**TIMING REQUIREMENTS (continued)**

PARAMETER	MIN	MAX	UNIT
Allowable frequency on LEADLAG		280	MHz
Allowable duty cycle on DLYCTRL and LEADLAG pins	25%	75%	

**ELECTRICAL CHARACTERISTICS**

## APPLICATION INFORMATION

### APPLICATION EXAMPLE

The following figure shows an example of using the CDCF5801 as a  $\times 4$  multiplier with the phase aligner de-skewing the unknown buffer delay of the two CDCV304s in the circuit. This circuitry would not be possible with a simple PLL because the feedback of the PLL would have the second CDCV304 in the loop, causing instability of the PLL due to a long delay.

Figure 9. Application Example

#### NOTE:

If an active element (microcontroller, ASIC, DSP, FPYA, DSP, etc.) is used in the CDCF5801 CLKOUT to DLYCTRL feedback loop, see application report SCAA075.

### SELECTING VDDREF

Generally, VDDREF can be set to any value between 1.2 V and VDD. The setting of VDDREF directly influences the trigger voltage of the input. Special care must be taken when using small signal swings to drive the CDCF5801 input (e.g., PECL). It is recommended to connect VDDREF directly to VDD, ac-couple the REFCLK input, and rebias the signal.

The following circuit is recommended to drive the CDCF5801 from a differential clock signal like PECL.

**APPLICATION INFORMATION (continued)**

- A. NOTE: If more signal swing is required and an unterminated transmission is on option, then R1 and R2 can both be replaced with 10-kΩ resistors.

**PACKAGING INFORMATION**

Orderable Device	Status <sup>(1)</sup>	Package Type	Package Drawing	Pins	Package Qty	Eco Plan <sup>(2)</sup>	Lead/Ball Finish	MSL Peak Temp <sup>(3)</sup>
CDCF5801DBQ	ACTIVE	SSOP/ QSOP	DBQ	24	50	Pb-Free (RoHS)	CU NIPDAU	Level-2-260C-1YEAR/ Level-1-220C-UNLIM
CDCF5801DBQR	ACTIVE	SSOP/ QSOP	DBQ	24	2500	Pb-Free (RoHS)	CU NIPDAU	Level-2-260C-1YEAR/ Level-1-220C-UNLIM
CDCF5801DBQRG4	ACTIVE	SSOP/ QSOP	DBQ	24	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15) per side.
  - D. Falls within JEDEC MO-137 variation AE.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

## Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
