ECL Pro™

DESCRIPTION

The SY10EP31V is a D flip-flop with set and reset. The device is pin and functionally equivalent to the EL31 and LVEL31 devices. With AC performance much faster than the EL31 and LVEL31 devices, the EP31V is ideal for applications requiring the fastest AC performance available. Both SET and RESET inputs are asynchronous, level triggered signals. Data enters the master portion of the flip-flop when CLK is low and is transferred to the slave, and thus the outputs, upon a positive transition of the CLK.

PIN NAMES

| Pin | Function |
|-----------------|---|
| CLK | ECL Clock Inputs |
| RESET | ECL Asynchronous Reset |
| SET | ECL Asynchronous Set |

| Q, /Q | ECL Data Outputs |
| V _{CC} | Positive Supply |
| V _{EE} | Negative, 0 Supply |
