

# TPS22946 Ultralow Power, Low Input Voltage, Current-Limited Load Switch With Shutoff, Auto-Restart, and Overcurrent Condition Time-Out

## 1 Features

- Ultralow Quiescent Current 1  $\mu\text{A}$  (Typical) at  $V_{\text{IN}} = 1.8\text{ V}$
- Input Voltage Range: 1.62 V to 5.5 V
- Low ON-Resistance
  - $r_{\text{ON}} = 300\text{ m}\Omega$  at  $V_{\text{IN}} = 5.5\text{ V}$
  - $r_{\text{ON}} = 400\text{ m}\Omega$  at  $V_{\text{IN}} = 3.3\text{ V}$
  - $r_{\text{ON}} = 500\text{ m}\Omega$  at  $V_{\text{IN}} = 2.5\text{ V}$
  - $r_{\text{ON}} = 600\text{ m}\Omega$  at  $V_{\text{IN}} = 1.8\text{ V}$
- Selectable Minimum Current Limit: 155 mA, 70 mA, or 30 mA
- Integrated Inrush Current Time-out (8 ms)
- Shutdown Current:  $< 1\ \mu\text{A}$
- Thermal Shutdown
- Fault Blanking
- Auto Restart
- Overcurrent Condition Time-out (Automatic Disable for Permanent Overcurrent)
- 1.8-V Compatible Control Input
- ESD Performance Tested Per JESD 22
  - 6000-V Human-Body Model (A114-B, Class II)
- Tiny DSGBA Package 1.4 mm  $\times$  0.9 mm (YZP)

## 2 Applications

- Fingerprint Module Protection
- Portable Consumer Electronics
- Mobile Phones
- Smartphones
- Notebooks
- GPS Devices

## 3 Description

The TPS22946 is an ultralow power load switch that provides protection to systems and loads in high-current conditions. The device contains a 300-m $\Omega$  current-limited P-channel MOSFET that can operate over an input voltage range of 1.62 V to 5.5 V. The switch is controlled by an on/off input (ON), which can interface directly with low-voltage control signals. The TPS22946 includes thermal shutdown protection that prevents damage to the device when a continuous over-current condition causes excessive heating by turning off the switch.

When the switch current reaches the maximum limit, the TPS22946 operates in a constant-current mode to prohibit excessive currents from causing damage. The current limit can be selected using the CL input: a high CL input sets the current limit to 155 mA, a low CL input sets the current limit to 70 mA, and a floating CL input sets the current limit to 30 mA.

If the constant current condition persists after 10 ms, the switch is turned off and the fault signal pin (OC) is pulled low. The TPS22946 has an auto-restart feature which turns the switch on again after 70 ms if the ON pin is still active. If the TPS22946 remains in an over-current condition for 5 seconds, the device shuts off until it is turned on again by setting the ON control signal off and then on.

If the device is used to protect an LDO, the inrush current required by the LDO at startup can, in some cases, exceed the current limit and initiate a blanking (current limiting) condition. The TPS22946 provides allowance for this scenario during startup of the LDO by temporarily increasing the current limit to 435 mA for 8 ms after the load switch is enabled.

The TPS22946 is available in space-saving 6-pin DSBGA (YZP) package. The device is characterized for operation over the free-air temperature range of  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPS22946	DSBGA (6)	0.90 mm $\times$ 1.40 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 4 Revision History

### Changes from Revision A (February 2010) to Revision B

**Page**

- Added *Pin Configuration and Functions* section, *ESD Ratings* table, *Feature Description* section, *Device Functional Modes*, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section ..... **1**

## 5 Pin Configuration and Functions

### Pin Assignments

<b>C</b>	ON	OC
<b>B</b>	CL	GND
<b>A</b>	$V_{IN}$	$V_{OUT}$
	<b>2</b>	<b>1</b>

### Pin Functions

PIN		I/O	DESCRIPTION
NO.	NAME		
A1	$V_{OUT}$	O	Output of the power switch
A2	$V_{IN}$	I	Supply. Input to the power switch and the supply voltage for the device
B1	GND	–	Ground
B2	CL	I	Current limit selection. CL high is 155-mA current limit, CL low is 70-mA current limit, and CL floating is 30-mA current limit.
C1	OC	O	Overcurrent output flag. Active-low open-drain output that indicates an overcurrent, supply undervoltage, or overtemperature state.
C2	ON	I	On/off control input

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
$V_I$	Input voltage	$V_{IN}, V_{OUT}, ON, CL$		V
$T_J$	Operating junction temperature	-40	125	°C
$T_{stg}$	Storage temperature	-65	150	°C

### 6.2 ESD Ratings

		VALUE	UNIT	
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per JEDEC specification JESD22 (A114-B, Class II) <sup>(1)</sup>	±6000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±2000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT		
$V_{IN}$	Input voltage	1.62	5.5	V		
$V_{ON}$	ON pin voltage	0	5.5	V		
$V_{CL}$	CL pin voltage	0	$V_{IN}$	V		
$V_{OUT}$	OUT pin voltage	0	$V_{IN}$	V		
$T_A$	Ambient free-air temperature	-40	85	°C		
$t_{CLSET}$	CL pin setting time	8		ms		
$C_{IN}$	Input capacitor	1 <sup>(1)</sup>		μF		
$V_{IH}$	ON high-level input voltage	$V_{IN} = 1.8\text{ V}$	1.1	5.5	V	
		$V_{IN} = 2.5\text{ V}$	1.2	5.5		
		$V_{IN} = 3.3\text{ V}$	1.3	5.5		
		$V_{IN} = 5.5\text{ V}$	1.4	5.5		
$V_{IL}$	ON low-level input voltage	$V_{IN} = 1.8\text{ V}$		0.4	V	
		$V_{IN} = 2.5\text{ V}$		0.4		
		$V_{IN} = 3.3\text{ V}$		0.5		
		$V_{IN} = 5.5\text{ V}$		0.6		
$V_{IH}$	CL low-level input voltage	$V_{IN} = 1.62\text{ V to } 5.5\text{ V}, I_{IH} = 55\text{ }\mu\text{A}$		$0.7 V_{IN}$	$V_{IN}$	V
$V_{IL}$	CL high-level input voltage	$V_{IN} = 1.62\text{ V to } 5.5\text{ V}, I_{IL} = 55\text{ }\mu\text{A}$		GND	$0.3 V_{IN}$	V

## 6.5 Electrical Characteristics

 $V_{IN} = 1.62\text{ V to }5.5\text{ V}$ , TYP values at  $T_A = 25^\circ\text{C}$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS		$T_A$ <sup>(1)</sup>	MIN	TYP	MAX	UNIT
$I_{IN}$	Average quiescent current	$I_{OUT} = 0\text{ mA}$ , $V_{IN} = 4.5\text{ V to }5.5\text{ V}$		Full range		1.5	5	$\mu\text{A}$
		$I_{OUT} = 0\text{ mA}$ , $V_{IN} = 3.0\text{ V to }3.6\text{ V}$				1.3	4	
		$I_{OUT} = 0\text{ mA}$ , $V_{IN} = 1.62\text{ V to }1.98\text{ V}$				1	3	
$I_{IN(OFF)}$	OFF state supply current	$V_{ON} = 0\text{ V}$	$V_{IN} = 3.6\text{ V}$ , $V_{OUT}$ open	Full range		0.1	1	$\mu\text{A}$
$I_{OUT(LEAKAGE)}$	OFF state switch current	$V_{ON} = 0\text{ V}$	$V_{IN} = 3.6\text{ V}$ , $V_{OUT}$ short to GND	Full range		0.1	1.1	$\mu\text{A}$
$r_{ON}$	ON-state resistance	$I_{OUT} = -100\text{ mA}$	$V_{IN} = 5.5\text{ V}$	25°C		0.3	0.4	$\Omega$
				Full range			0.45	
			$V_{IN} = 3.3\text{ V}$	25°C		0.4	0.5	
				Full range			0.55	
			$V_{IN} = 2.5\text{ V}$	25°C		0.5	0.6	
				Full range			0.65	
			$V_{IN} = 1.8\text{ V}$	25°C		0.6	0.8	
Full range				0.85				
$V_{IN} = 1.62\text{ V}$	25°C		0.7	0.9				
	Full range			1				
$I_{ON}$	ON input leakage current	$V_{ON} = V_{IN}$ or GND		Full range			1	$\mu\text{A}$
$I_{LIM}$	Current limit	$V_{IN} = 1.8\text{ V}$ , $V_{OUT} = 1.5\text{ V}$ , CL = GND		Full range	70	85	120	mA
		$V_{IN} = 3.3\text{ V}$ , $V_{OUT} = 3.0\text{ V}$ , CL = GND		Full range	60	80	115	
		$V_{IN} = 1.8\text{ V}$ , $V_{OUT} = 1.5\text{ V}$ , CL = VIN		Full range	155	175	235	
		$V_{IN} = 3.3\text{ V}$ , $V_{OUT} = 3.0\text{ V}$ , CL = VIN		Full range	135	165	230	
		$V_{IN} = 1.8\text{ V}$ , $V_{OUT} = 1.5\text{ V}$ , CL floating		Full range	30	45	60	
		$V_{IN} = 3.3\text{ V}$ , $V_{OUT} = 3.0\text{ V}$ , CL floating		Full range	28	40	60	
$I_{limit\_inrush}$	Inrush current limit	$R_I = 1\ \Omega$ , $V_{IN} = 3.3\text{ V}$ , $V_{OUT} = 2.3\text{ V}$		Full range	375	435	685	mA
	Thermal shutdown <sup>(2)</sup>	Shutdown threshold				135		$^\circ\text{C}$
		Return from shutdown		Full range		125		
		Hysteresis				10		
$V_{OL}$	OC output logic low voltage	$V_{IN} = 5\text{ V}$ , $I_{SINK} = 10\text{ mA}$		Full range		0.1	0.2	V
		$V_{IN} = 1.8\text{ V}$ , $I_{SINK} = 10\text{ mA}$					0.1	
$I_{OH}$	OC output high leakage current	$V_{IN} = 5\text{ V}$ , Switch ON		Full range			1	$\mu\text{A}$

(1) Full range  $T_A = -40^\circ\text{C to }85^\circ\text{C}$ 

(2) See [Overtemperature Protection](#).

## 6.6 Switching Characteristics

 $V_{IN} = 1.8\text{ V}$ ,  $R_L = 50\ \Omega$ ,  $C_L = 1\ \mu\text{F}$ ,  $T_A = -40^\circ\text{C}$  to  $85^\circ\text{C}$ , TYP values at  $T_A = 25^\circ\text{C}$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{PWON}$	Power-on time	$R_L = 50\ \Omega$ , $C_L = 1\ \mu\text{F}$		192		$\mu\text{s}$
$t_{PWROFF}$	Power-off time	$R_L = 50\ \Omega$ , $C_L = 1\ \mu\text{F}$		0.55		$\mu\text{s}$
$t_{ON}$	Turnon time	$R_L = 50\ \Omega$ , $C_L = 1\ \mu\text{F}$		125		$\mu\text{s}$
$t_{OFF}$	Turnoff time	$R_L = 50\ \Omega$ , $C_L = 1\ \mu\text{F}$		115		$\mu\text{s}$
$t_R$	$V_{OUT}$ rise time	$R_L = 50\ \Omega$ , $C_L = 1\ \mu\text{F}$		35		$\mu\text{s}$
$t_F$	$V_{OUT}$ fall time	$R_L = 50\ \Omega$ , $C_L = 1\ \mu\text{F}$		120		$\mu\text{s}$
$t_{BLANK}$	Overcurrent blanking time		7	10	15	ms
$t_{RSTART}$	Auto-restart time		50	70	95	ms
$t_{TIMEOUT}$	Overcurrent detection time-out <sup>(1)</sup>	$V_{IN} = V_{ON} = 3.3\text{ V}$ , hard short <sup>(2)</sup>		6000		ms
$t_{OVRTMP}$	Overtemperature detection maximum response time			7.7		ms
$t_{MODOC}$	Moderate overcurrent detection maximum response time	$V_{IN} = V_{ON} = 1.8\text{ V}$ , Moderate over-current condition <sup>(3)</sup>		63.5		ms
		$V_{IN} = V_{ON} = 3.3\text{ V}$ , Moderate overcurrent condition <sup>(3)</sup>		65.5		
$t_{HARDSHOR T}$	Hard-short detection maximum response time	$V_{IN} = V_{ON} = 1.8\text{ V}$ , hard short <sup>(2)</sup>		270		$\mu\text{s}$
		$V_{IN} = V_{ON} = 3.3\text{ V}$ , hard short <sup>(2)</sup>		295		

(1) See [Automatic Disable in Case of Permanent Overcurrent](#).

(2) Hard short check is performed at the output voltage of the switch. Hard short condition is active when  $V_{OUT} < 2/3 V_{IN}$ .

(3) If the current going through the switch is above  $I_{LIM}$ , then the moderate over-current condition is activated

## 8 Detailed Description

### 8.1 Overview

The TPS22946 is an ultralow power load switch that provides protection to systems and loads in high-current conditions. The device contains a 300-mΩ current-limited P-channel MOSFET that can operate over an input voltage range of 1.62 V to 5.5 V. The switch is controlled by an on/off input (ON), which is capable of interfacing directly with low-voltage control signals. The TPS22946 includes thermal shutdown protection that prevents damage to the device when a continuous over-current condition causes excessive heating by turning off the switch.

When the switch current reaches the maximum limit, the TPS22946 operates in a constant-current mode to prohibit excessive currents from causing damage. The current limit can be selected using the CL input: a high CL input sets the current limit to 155 mA, a low CL input sets the current limit to 70 mA, and a floating CL input sets the current limit to 30 mA.

If the constant current condition still persists after 10 ms, the switch is turned off and the fault signal pin (OC) is pulled low. The TPS22946 has an auto-restart feature which turns the switch on again after 70 ms if the ON pin is still active. If the TPS22946 remains in an over-current condition for 5 seconds, the device shuts off until it is turned on again by setting the ON control signal off and then on.

If the device is used to protect an LDO, the inrush current required by the LDO at startup can, in some cases, exceed the current limit and initiate a blanking (current limiting) condition. The TPS22946 device provides allowance for this scenario during startup of the LDO by temporarily increasing the current limit to 435 mA for 8 ms after the load switch is enabled.

The TPS22946 is available in a space-saving 6-pin DSBGA (YZP) package. The device is characterized for operation over the free-air temperature range of -40°C to 85°C.

Table 1. Feature List

	r <sub>ON</sub> (TYP) AT 5.5 V	CURRENT LIMIT	INTEGRATED INRUSH CURRENT TIME-OUT	CURRENT LIMIT BLANKING TIME	AUTO-RESTART TIME	OVERCURRENT TIME-OUT	ENABLE
TPS22946	300 mΩ	30 mA, 70 mA, or 155 mA	Yes	10 ms	70 ms	6 s	Active high

### 8.2 Functional Block Diagram

### 8.3 Feature Description

#### 8.3.1 Detection Schemes

##### 8.3.1.1 Overtemperature Detection

The thermal shutdown detection circuit is active every 8 ms for a period of 0.5 ms. The thermal shutdown protects the part from internally or externally generated excessive temperatures. During an over-temperature condition the switch is turned-off (Open). The switch automatically turns-on (closes) again if temperature of the die drops below the threshold temperature while the part is still enabled.

In addition, if an overcurrent fault condition is detected due to a moderate overcurrent or a hard-short, the thermal shutdown is activated immediately and stays on continuously for the duration of blanking (see Figure 32).

NOTE: Case where the temperature causes the overtemperature detection circuit to trip before the other detection schemes.

Figure 22. Overtemperature Detection

## Feature Description (continued)

### 8.3.1.2 Hard-Short Detection

The hard-short detection circuit is active every 250  $\mu$ s for a period of 125  $\mu$ s. A comparator monitors the output voltage,  $V_{OUT}$ . A hard short is detected when  $V_{OUT}$  is lower than  $2/3 V_{IN}$ . The switch then goes into current-limiting mode.

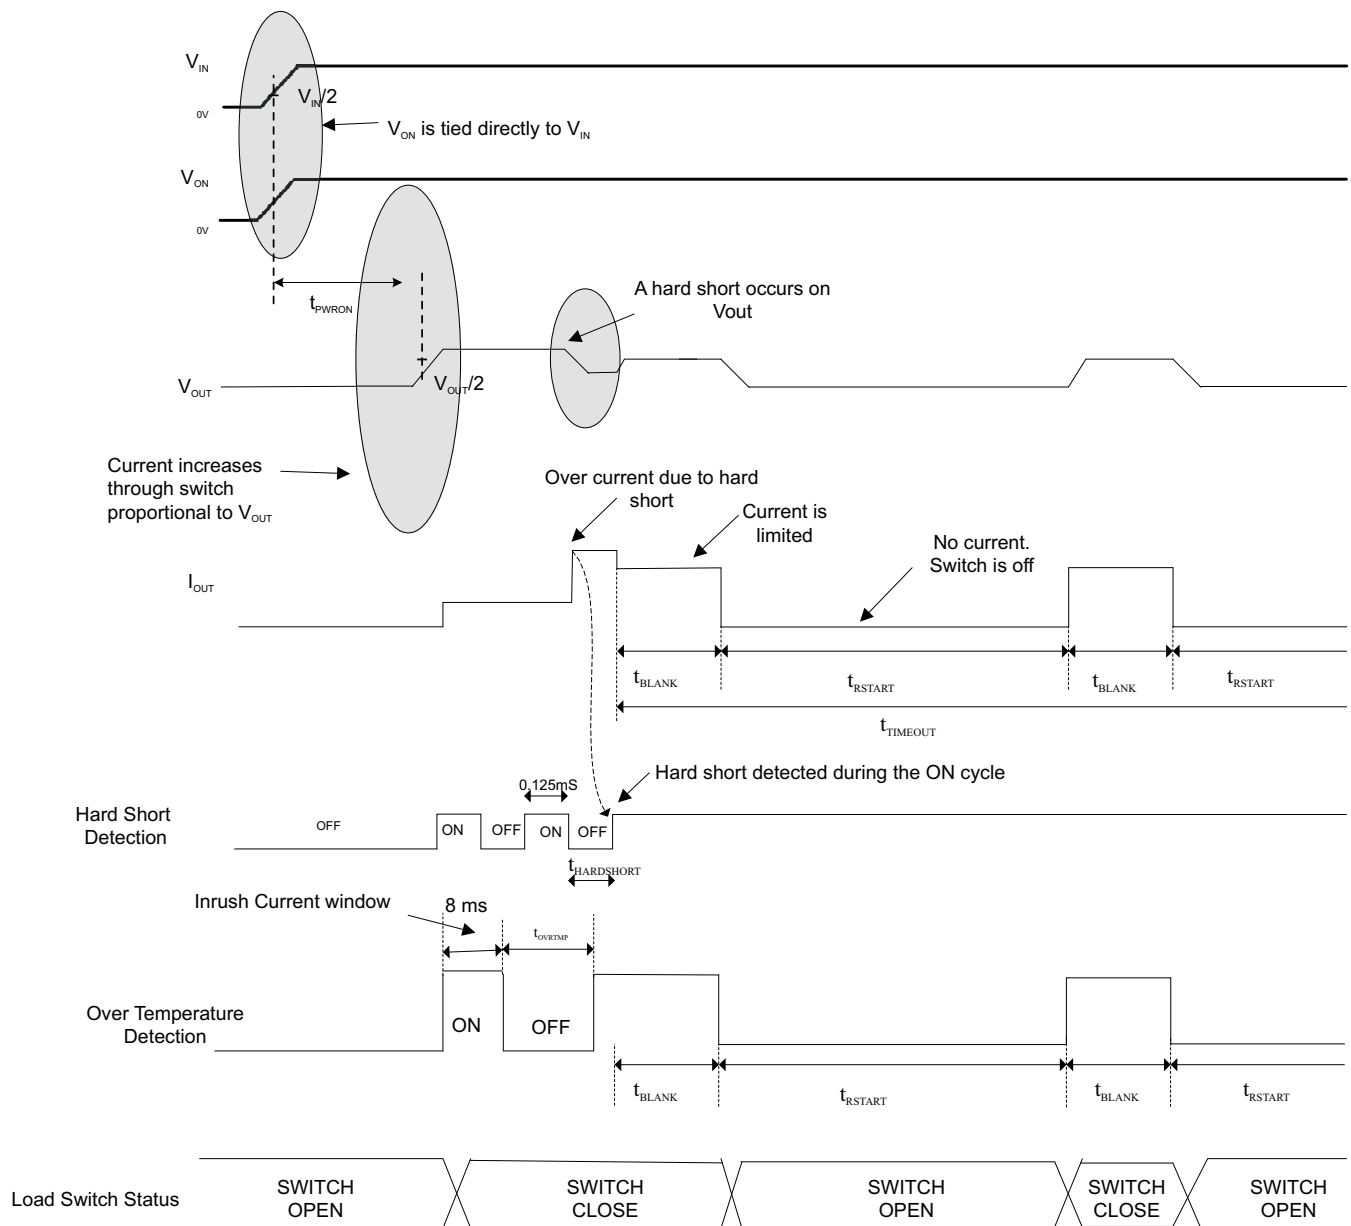

Figure 23. Hard-Short Detection

Feature Description (continued)

8.3.1.3 Moderate Overcurrent Detection

The moderate overcurrent detection circuit is active every 64 ms for a period of 0.5 ms. A moderate over-current condition is triggered when the output current of the switch exceeds the current limit value and is not yet into hard short condition. The switch then goes into current-limiting mode.

NOTE: The overcurrent does not cause the temperature to go above 140°C here.

Figure 24. Moderate Overcurrent Detection

## Feature Description (continued)

### 8.3.1.4 Current Limiting Mode

When an overcurrent condition (moderate or a hard short) is detected, the TPS22946 operates in a constant-current mode to prohibit excessive currents from causing damage. TPS22946 has a current limit of 30 mA, 70 mA, or 155 mA.

If the constant current condition still persists after 10ms, the device shuts off the switch and pulls the fault signal pin (OC) low. The TPS22946 has an auto-restart feature which turns the switch on again after 70 ms if the ON pin is still active.

### 8.3.1.5 Fault Reporting

When a moderate overcurrent, hard short or overtemperature condition is detected, OC is set active low to signal a fault condition. OC is an open-drain MOSFET and requires a pullup resistor between  $V_{IN}$  and OC. During shutdown, the pulldown on OC is disabled, reducing current draw from the supply.

### 8.3.1.6 Power-On and Power-Off Sequence

The device is enabled internally only once the hard-short detection circuit is enabled.

Feature Description (continued)

Figure 25. Power-On/Power-Off Sequence Timing

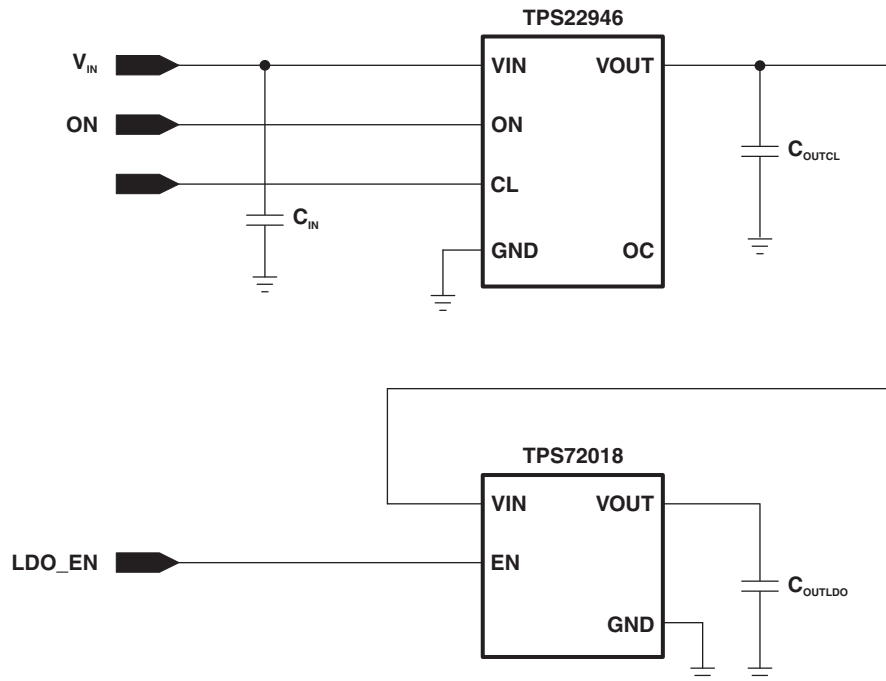

## Feature Description (continued)

### 8.3.1.7 Automatic Disable in Case of Permanent Overcurrent

When the switch enters the current-limiting mode due to a hard short condition or a moderate over-current condition, TPS22946 goes through the 10-ms blanking state and the 70-ms auto restart state. If the hard-short condition or the moderate over-current condition persists after 5 s, the part shuts off regardless of the ON signal. The switch is turned on again after a power reset if the ON pin is HIGH.

### 8.3.2 Inrush Current Time-out Feature

The inrush current required by the LDO at startup can in some cases exceed the current limit and initiate a blanking (current limiting) condition. TPS22946 provides allowance for this scenario by temporarily increasing the current limit to 435 mA for 8 ms after the load switch is enabled. This time-out is initiated by the positive edge transition on the ON signal.

**Figure 26. Inrush Current Time-out Circuit**

Feature Description (continued)

Figure 27. Inrush Current Time-out Timing

8.3.3 CL Control Pin

The TPS22946 supports three current limits: 30 mA, 70 mA, and 155 mA. The current limit selection is determined by the status of the digital input CL pin, as shown in Table 2. A high impedance, or floating, condition allows the CL pin to support a third state. The TPS22946 monitors the state of the CL pin during start-up from a disabled state, and upon start-up sets the current limit accordingly. When floating the CL pin, keep the total capacitance on the pin less than 100 pF and the resistive loading greater than 10 MΩ to ensure proper operation. Any changes to the state of the CL pin after the start-up operation has completed are ignored until the next start-up cycle.

The CL pin must be driven with logic levels referenced to V<sub>IN</sub>. The CL pin can be tied high or low on the printed wiring board (PWB) or driven by a general purpose I/O (GPIO), as long as the V<sub>IL</sub> and V<sub>IH</sub> recommended operating conditions are met.

Table 2. CL Control Pin

CL PIN STATUS	CURRENT LIMIT
Logic low <sup>(1)</sup>	70 mA
Float <sup>(2)</sup>	30 mA
Logic high <sup>(1)</sup>	155 mA

(1) Resistance to VCC or GND < 100 Ω  
 (2) Load on CL: C < 100 pF, R > 10 MΩ

**Figure 28. CL Pin Read Timing When cycling VIN (ON Pin Tied to VIN)**

**Figure 29. CL Pin Read Timing Cycling ON Pin (VIN High)**

### 8.3.4 Overtemperature Protection

An overtemperature condition occurs when the temperature of the part is greater than 140°C. The OC flag will go low to indicate a fault. If the overtemperature condition persists for more than 6 seconds, the part times out and shuts OFF. The part must be enabled by either toggling the ON pin or the VIN pin. If the temperature falls below 130°C within 5 seconds, the part will start normal operation.

If the temperature is not constantly high above 140°C and is toggling between greater than 140°C and less than 130°C, the internal time-out timer keeps resetting. If this event occurs more than 32 times, it will cause the part to shut OFF. It can be enabled by toggling either the ON pin or the VIN pin.

### 8.4 Device Functional Modes

Table 3. Function Table

ON	CL	TPS22946
L	x	$V_{IN}$ to $V_{OUT}$ switch is off (open)
H	x	$V_{IN}$ to $V_{OUT}$ switch is on (closed)
x	H <sup>(1)</sup>	Current limit set to 155 mA
x	L <sup>(1)</sup>	Current limit set to 70 mA
x	Float <sup>(2)</sup>	Current limit set to 30 mA

(1) Resistance to VCC or GND < 100  $\Omega$

(2) Load on CL: C < 100 pF, R > 10 M $\Omega$

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

#### 9.1.1 On/Off Control

The ON pin controls the state of the switch. Activating ON continuously holds the switch in the on state so long as there is no fault. A junction temperature in excess of 150°C overrides the ON control to turn off the switch. ON is active HIGH and has a low threshold making it capable of interfacing with low voltage signals. When the MOSFET is off, the body diode is disabled so no current can flow through it from the input to the output; however, the body diode does not prevent reverse current flowing.

### 9.2 Typical Application

This application demonstrates how the TPS22946 can be used to power a downstream load that includes a capacitive element ( $C_{LOAD}$ ).

Figure 34. Typical Application Schematic

#### 9.2.1 Design Requirements

For this design example, use the following as the input parameters.

Table 4. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
$V_{IN}$	3.3 V
Output capacitance ( $C_{LOAD}$ )	1 $\mu$ F
$V_{OUT}$ rise time ( $t_R$ )	50 $\mu$ s

## 9.2.2 Detailed Design Procedure

To begin the design process, the designer must know the following:

- $V_{IN}$  voltage
- Output capacitance ( $C_{LOAD}$ )
- $V_{OUT}$  rise time ( $t_R$ )

The TPS22946 has a 435-mA current limit during initial turnon of the switch,  $I_{limit\_inrush}$ . This current limit is higher than the steady-state current limit,  $I_{LIM}$ . The purpose of this feature is to allow the inrush current that is caused by charging up the capacitor,  $C_{LOAD}$ . To calculate the inrush current that is caused by the capacitor during initial turnon, use the following equation:

$$I_{INRUSH} = C_L \times \frac{dV_{OUT}}{dt}$$

where

- $I_{INRUSH}$  = amount of inrush current caused by  $C_{LOAD}$
- $C_L$  = capacitance on  $V_{OUT}$
- $dt$  =  $V_{OUT}$  rise time
- $dV_{OUT}$  = increase in  $V_{OUT}$  during the rise time

(1)

Using the given example values, the inrush current in this typical application will be 66-mA:

$$66 \text{ mA} = 1 \mu\text{F} \times 3.3 \text{ V} / 50 \mu\text{s}$$

(2)

The oscilloscope capture in [Figure 35](#) shows the inrush current for the given design example.

## 9.2.3 Application Curve

**Figure 35. Inrush Current With 1- $\mu\text{F}$  Output Capacitor**

## 10 Power Supply Recommendations

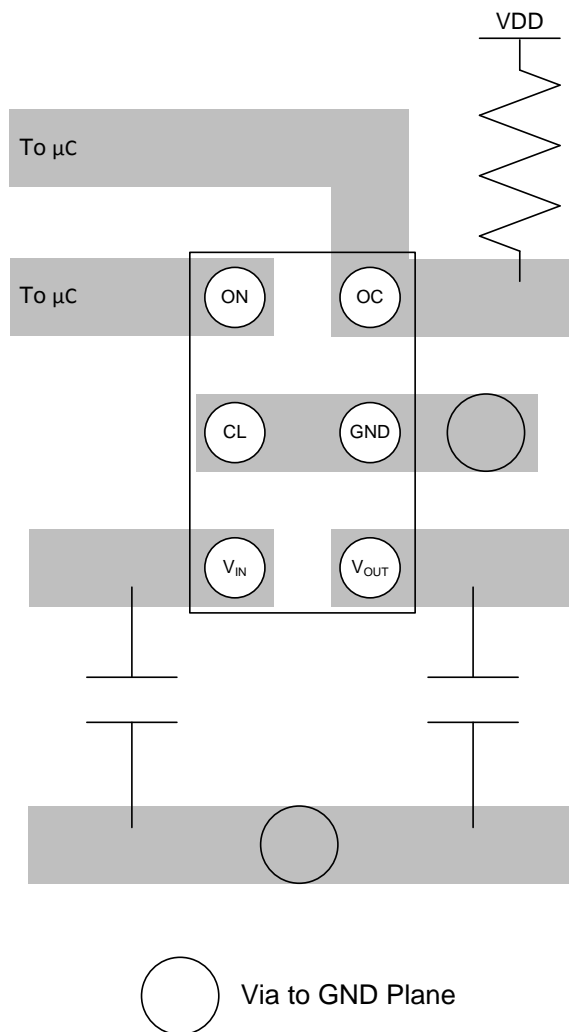

The device is designed to operate from a  $V_{IN}$  range of 1.62 to 5.5 V. The  $V_{IN}$  power supply should be well regulated and placed as close to the  $V_{IN}$  terminal as possible. The power supply must be able to withstand all transient load current steps. In most situations, using the minimum recommended input capacitance of 1  $\mu\text{F}$  is sufficient to prevent the supply voltage from dipping when the switch is turned on. In cases where the power supply is slow to respond to a large transient current or large load current step, additional bulk capacitance may be required on the input.

## 11 Layout

### 11.1 Layout Guidelines

- The  $C_{IN}$  capacitor should be placed as close as possible to the  $V_{IN}$  pin.
- The  $V_{IN}$  and  $V_{OUT}$  traces should be the appropriate width to carry the load current.
- The CL pin may be connected directly the GND or  $V_{IN}$  (depending on the desired current limit). The CL pin may also be left floating.

### 11.2 Layout Example

**Figure 36. Layout Example**

## 12 Device and Documentation Support

### 12.1 Trademarks

All trademarks are the property of their respective owners.

### 12.2 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 12.3 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TPS22946YZPR	ACTIVE	DSBGA	YZP	6	3000	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM	-40 to 85	(5H ~ 5H2)	<b>Samples</b>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.

## Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
