VOLTAGE DETECTOR

■ GENERAL DESCRIPTION

The NJU7704/05 is a low quiescent current voltage detector featuring high precision detection voltage.

The detection voltage is internally fixed with an accuracy of 1.0%.

The NJU7704/05 are useful for preventing malfunction of microcomputer or DSP etc. through detect a drop in voltage of battery or power supply.

The delay function achieves set wait time when supply voltage is unstable. Moreover, the delay function can make a sequence that other devices in application work and stabilize before microcomputer or DSP works.

Delay time can be set by an external capacitor. Manual reset function can output reset signal irrespective of detection voltage.

NJU7704 is Nch. Open Drain and NJU7705 is a C-MOS output type.

Small packaging makes NJU7704 and NJU7705 suitable for space conscious applications.

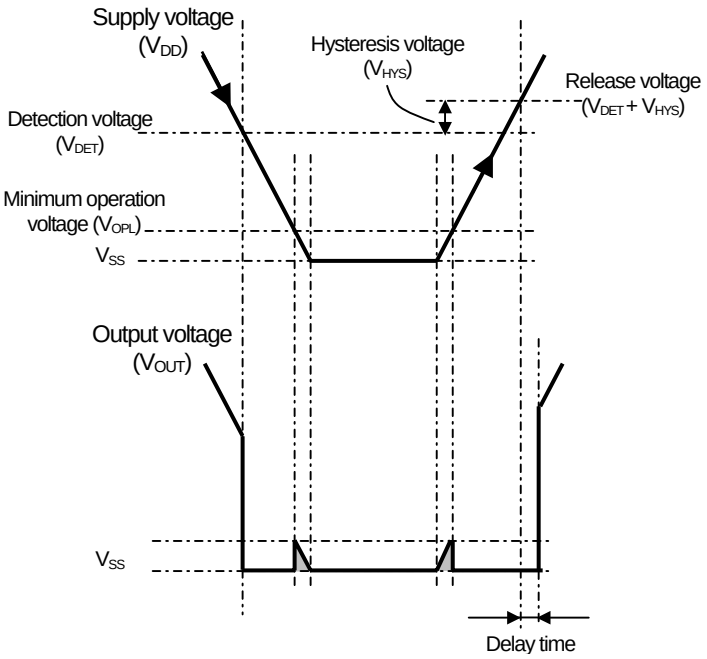
■ FUNCTIONAL DESCRIPTION

(1) Basic Operation



(1) When supply voltage(V_{DD}) drops below detection voltage(V_{DET}), Output voltage(V_{OUT}) changes "H" to "L" to alert reset state.

(2) The reset state is kept while V_{DD} is lower than release voltage. The release voltage is a sum of V_{DET} and Hysterisis voltage (V_{HYS}). Please refer to the (*7) below.

(3) When V_{DD} becomes higher than the release voltage and reset release delay time set by the external capacitors is past, then V_{OUT} changes from "L" to "H" to resume normal state.

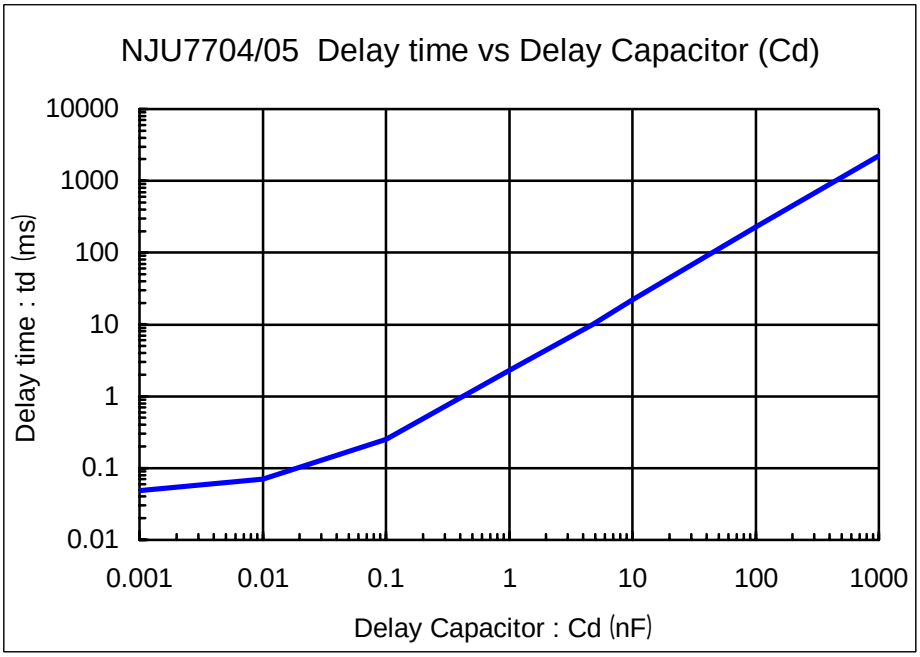
(*7) V_{HYS} is to avoid unstable V_{OUT} state caused by rapid voltage change at nearby V_{DET}.

(*8): C-MOS output product (NJU7705) : When V_{DD} less than V_{OPL}, V_{OUT} is free of the shaded region.

(2) Description of Delay Time

Delay time can be set by the external capacitor. The delay time is given by the following:

External delay capacitor (nF) = Required delay time : td(ms) / 10(ms) x 4.7(nF)



(3) Description of Manual Reset

Reset signal can output independently with MR.

Logic of MR	Operation
Active "L"	V_{MR}= "L" => Reset "ON"
Active "H"	V_{MR}= "H" => Reset "ON"

If Manual Reset is not required, please connect MR terminal as following.

Logic of MR	Connection
Active "L"	Connect MR terminal to V_{DD} or open
Active "H"	Connect MR terminal to GND or open
