Description

The HIP0061 is a power MOSFET array that consists of three matched N-Channel enhancement mode MOS transistors connected in a common source configuration. The advanced Harris PASIC2 process technology used in this product utilizes efficient geometries that provides outstanding device performance and ruggedness.

The HIP0061 is designed to integrate three power devices in one chip thus providing board layout area and heat sink savings for applications such as Motor Controls, Lamps, Solenoids and Resistive Loads.
