DESIGNING

The following equations are applied in the dimensioning of the resistors at stationary load. If more information is required please consult Ohmite. It is assumed that the air around the resistors is stationary (worst case). See ohmite.com for more examples.

1. WFH is mounted on a heat sink:

- A. The thermal resistance R_{TH} of the heat sink is known,
 $T = W_{MAX} \times (R_{TH4} + R_{TH})$
Check that:
 $T_{MAX} = W_{MAX} \times (R_{TH} + R_{TH3} + R_{TH1}) + T_{AMB} < 220^\circ C$
- B. The Temperature of the Heat Sink is known,
 $T = W_{MAX} \times R_{TH4} + T_H$
Check that:
 $T_{MAX} = W_{MAX} \times (R_{TH1} + R_{TH3}) + T_H < 220^\circ C$

2. WFH is mounted without a heat sink:

- Check that:
 $T_{MAX} = W_{MAX} \times (R_{TH1} + R_{TH2}) + T_{AMB} < 220^\circ C$

Where:

- W_{MAX} = Maximum required load in resistor
- T_{MAX} = Maximum hot spot temperature requested in resistor ($T_{MAX} < 220^\circ C$) The lower T_{MAX} the higher reliability and lifetime.
- T_{AMB} = Ambient temperature
- R_{TH} = Thermal resistance. Refer to table Thermal resistances
- T_H = Heat sink temperature (chassis).
- T = Temperature on top of the Aluminum profile.

Ohmite's new flat core winding technology allows for wire-wound heatsinkable resistors affording a very low profile, and superior thermal transfer characteristics when compared to conventional aluminum housed wirewound resistors. Close mounting of heat sensitive components is possible due to only a slight rise of the temperature on the aluminum profile. No heat sink compound is required because of large mounting surface.

SPECIFICATIONS

Power rating: 90W-330W

Resistance tolerance: $\pm 5\%$, $\pm 10\%$

Temperature Coefficients:

Normal: 50ppm - 150ppm

Low ohmic values: 400ppm

Dielectric strength: 2500 VAC peak

Working voltage: 1200 VAC

Test voltage: 6000 VAC

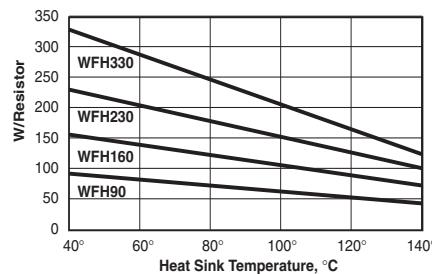

Lead wire: (wire terminal version only): XLPE, 600V, 125C, 18 AWG stranded

Insulation: Silicone Rubber & Mica. The Silicone is UL-recognised (UL 94 HB) to a working temperature of 220°C. Temperatures of up to 300°C can be endured for shorter periods. This may however cause an expansion of the silicone rubber with a possibility of reducing the dielectric strength.

FEATURES

- Solder, wire and "Fast-On" Termination
- More resistors in one profile possible
- Custom wire lengths available

POWER DISSIPATION

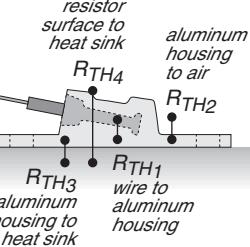

This graph shows the maximum wattage rating for each possible resistor of standard size corresponding to the heat sink temperature. It is assumed that all resistors are equally loaded.

THIS PRODUCT IS DESIGNED FOR USE WITH PROPER HEATSINKING.

Maximum base plate temperature of the resistor must be monitored and kept within specified limits to establish the power rating. Best technique is to attach a thermocouple to the side of the base plate of the resistor. Temperature of plastic housing or heat sink cannot be used to establish rating of the resistor.
