

RoHS Compliant

Industrial Micro SD Card

Customized Specifications

March 21st, 2014

Version 1.0

Apacer Technology Inc.

1F, No.32, Zhongcheng Rd., Tucheng Dist., New Taipei City, Taiwan, R.O.C

Tel: +886-2-2267-8000 Fax: +886-2-2267-2261

www.apacer.com

FEATURES:

- **Fully compliant with SD Card Specifications 2.0**
- **Capacity range**
 - 256, 512 MB
- **Performance***
 - Sustained Read: Up to 19 MB/sec
 - Sustained Write: Up to 14 MB/sec
- **SD-protocol compatible**
- **Standard interface**
 - 8-pins SD interface
- **NAND Flash Type: SLC**
- **Operating voltage: 2.7V ~ 3.6V**
- **Physical dimension** : 15.0 mm(L) x 11.0 mm(W) x 1.0 mm(H)
- **Intelligent endurance design**
 - Built-in advanced ECC algorithm: 24bits/1KB
 - Wear-leveling algorithm
- **Temperature ranges**
 - Operating temperature: -40°C ~ +85°C
 - Storage temperature: -40°C ~ +85°C
- **Power consumption:**
 - Operating mode: 34 mA
 - Standby mode: 60 uA
- **Supports S.M.A.R.T.**
- **RoHS Compliant**

*Vary from capacities. Performance values presented here are typical and may vary depending on settings and platforms.

1. General Description

Micro SD card has been the favorable storage in both enterprise and consumer electronic devices for its compact size, relatively fast transfer speed and decent reliability. Apacer industrial micro SD card is capable of delivering optimal speed up to 19 MB/s. Reliability wise, the card can be put in operations with ambient temperatures ranging -40 to 85°C. Built with SLC NAND Flash, the card surpasses most of the typical of its kind in the market with regard in program/erase cycles.

The industrial SD card is compatible with SD Card 2.0 specification and delivers compatibility as well as reliability. The card is built in with hardware ECC engine that can detect and correct up to 24bits/1KB of transferring data. Moreover, this industrial card is designed with power smart mechanism that supports standby and sleep mode, making it an ideal portable storage when power supply is limited.

1.1 Product Function Block

The Micro SD contains a card controller and a memory core for the SD standard interface.

1.2 Functional description

The Micro SD device contains a high level, intelligent flash management that provides many capabilities including:

- Powerful ECC – correcting up to 24bits/1KB
- Wear-leveling

2. Product Characteristics

2.1 Card Architecture

2.2 Pin Assignment

Pin	SD Mode		SPI Mode	
	Name	Description	Name	Description
1	DAT2	Data line[bit 2]	RSV	Reserved
2	CD/DAT3 ²	Card Detect/Data line [bit 3]	CS	Chip select
3	CMD	Command/Response	DI	Data in
4	VDD	Supply voltage	VDD	Supply voltage
5	CLK	Clock	SCLK	Clock
6	VSS	Supply voltage ground	VSS	Supply voltage ground
7	DAT0	Data line[bit 0]	DO	Data out
8	DAT1	Data line[bit 1]	RSV	Reserved

2.3 Capacity Specification

Capacity	LBA	Cylinder	Head	Sector	Total Bytes
256 MB	499,712	495	16	63	255,852,544
512 MB	1,003,520	995	16	63	513,802,240

Note: results may vary depending on settings and platforms. Please be noted that products are shipped with unformatted capacity. The number of user data bytes and usable storage space may vary from different host operating systems.

2.4 Performance

Performances of the SD card are shown in the table below.

	Capacity	256 MB	512 MB
Modes			
Sequential Read (MB/s)		19	20
Sequential Write (MB/s)		10	16

Note: results may vary depending on settings and platforms.

2.5 Absolute Maximum Ratings

Symbol	Parameter	Min.	Max.	Unit
V _{DD}	Supply Voltage	2.7	3.6	V
T _{storage}	Storage Temperature	-40	85	°C
T _a	Ambient Operating Temperature	-40	85	°C

2.6 Power consumption (typical)

Read at 3.3V (mA)	Write at 3.3V (mA)	Stand By (uA)
40	65	150

*Power consumption may differ from host system configurations.

3. Physical Characteristics

Top View

Bottom View

4. Electrical Characteristics

4.1 Bus Interface Timing (Standard)

SYMBOL	PARAMETER	MIN	MAX	UNIT	Note
Clock CLK (All values are referred to min(V_{IH}) and max(V_{IL}))					
f _{PP}	Clock frequency Data Transfer Mode	0	25	MHz	C _{card} ≤ 10 pF (1 card)
f _{OD}	Clock frequency Identification Mode	0 ₍₁₎ /100	400	kHz	C _{card} ≤ 10 pF (1 card)
t _{WL}	Clock low time	10	-	ns	C _{card} ≤ 10 pF (1 card)
t _{WH}	Clock high time	10	-	ns	C _{card} ≤ 10 pF (1 card)
t _{TLH}	Clock rise time	-	10	ns	C _{card} ≤ 10 pF (1 card)
t _{THL}	Clock fall time	-	10	ns	C _{card} ≤ 10 pF (1 card)
t _{ISU}	Input setup time	5	-	ns	C _{card} ≤ 10 pF (1 card)
t _{IH}	Input hold time	5	-	ns	C _{card} ≤ 10 pF (1 card)
t _{ODLY}	Output delay time	0	14	ns	C _L ≤ 40 pF (1 card)
t _{ODLY}	Output Delay time during Identification Mode	0	50	ns	C _L ≤ 40 pF (1 card)

(1)0Hz means to stop the clock. The given minimum frequency range is for cases that requires the clock to be continued.

4.2 Bus Interface Timing (High-speed)

Shaded areas are not valid

SYMBOL	PARAMETER	MIN	MAX	UNIT	Note
f_{PP}	Clock frequency data transfer mode	0	50	MHz	$C_{card} \leq 10 \text{ pF}$ (1 card)
t_{WL}	Clock low time	7	-	ns	$C_{card} \leq 10 \text{ pF}$ (1 card)
t_{WH}	Clock high time	7	-	ns	$C_{card} \leq 10 \text{ pF}$ (1 card)
t_{TLH}	Clock rise time	-	3	ns	$C_{card} \leq 10 \text{ pF}$ (1 card)
t_{THL}	Clock fall time	-	3	ns	$C_{card} \leq 10 \text{ pF}$ (1 card)
t_{ISU}	Input setup time	6	-	ns	$C_{card} \leq 10 \text{ pF}$ (1 card)
t_{IH}	Input hold time	2	-	ns	$C_{card} \leq 10 \text{ pF}$ (1 card)
t_{ODLY}	Output delay time		14	ns	$CL \leq 40 \text{ pF}$ (1 card)
T_{OH}	Output hold time	2.5	50	ns	$CL \leq 15 \text{ pF}$ (1 card)
C_L	System capacitance of each line*		40	pF	$CL \leq 15 \text{ pF}$ (1 card)

*In order to satisfy severe timing, host shall run on only one card

5. S.M.A.R.T.

S.M.A.R.T. is the abbreviation for Self-Monitoring, Analysis and Reporting Technology, an open standard allowing disk drives to automatically monitor their own health and report potential problems. It provides users critical drive status information and attributes parameters for anticipation purposes. Ideally, this should prevent unexpected drive failure and data loss.

Depending on product ordering requests, we provide customizable user interfaces for our S.M.A.R.T utility. The utility program comes in two types of interfaces versions: complete and simple.

Complete User Interface Version:

Detailed Description for SMART Information

1. Average Erase Count

Value: To record average erase ratio.

This value is calculated by “total erase counts”, “Flash P/E cycles”, “Flash total blocks”.

Initial value = 00.00%

Maximum value = 100.00%

2. Abnormal Shutdown Count

Value: To record abnormal shutdown condition.

Increasing this value by 1 when detected error in the power on stage.

Initial value = 0.

Maximum value = 4294967295.

3. Power Cycle Count

Value: To record power cycle condition.

Increasing this value by 1 when a power Cycle (both normal and abnormal) occurred.

Initial value = 0.

Maximum value = 4294967295.

4. Spare Block Count

Value: To record spare block counts.

Decreasing this variable when detected run-time bad blocks.

(Note:run-time bad blocks may be “erase error”, “program error”, “read error”.)

Initial value = depend on Flash.

Maximum value = 255.

Minimum value = 0.

5. ECC Uncorrectable Count

Value: To record ECC uncorrectable block counts.

Increase this value by 1 when fatal error occurred in Flash read operation.

Initial value = 0.

Maximum value = 255.

6. Flash Type

Value: To determinate mounted Flash type, and always keep in original value.

0: SLC, 1:MLC.

Initial value = depend on Flash.

7. Initial Bad Block Count

Value: To record initial bad blocks when MP process, and always keep in original value.

Initial value = depend on Flash.

Maximum value = 65535.

8. Later Bad Block Count

Value: To record run time bad blocks.

Increasing this variable when detected run-time bad blocks.

Initial value = 0.

Maximum value = 65535.

Simple User Interface Version:

Average Erase Count

Value: To record average erase ratio.

This value is calculated by “total erase counts”, “Flash P/E cycles”, “Flash total blocks”.

Initial value = 00.00%

Maximum value = 100.00%

Detect

Detect the available drive for S.M.A.R.T. monitoring.

Get SmartInfo

Click it to display the health status of the monitored drive, which appears as a dashboard presence.

6. Product Ordering Information

6.1 Product Code Designations

6.2 Valid Combinations

<i>Capacity</i>	<i>AP/N</i>
256MB	AP-MSD256ISI-1T
512MB	AP-MSD512IDI-1T

Note:

- Valid combinations list out the available models for mass production.
- Products are normally shipped in unformatted capacities unless required otherwise.
- For customization request, please consult with Apacer sales representatives.

**Стандарт
Электрон
Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
