Triple single-pole double-throw analog switch

Rev. 04 — 10 August 2009

Product data sheet

1. General description

The 74LV4053 is a triple single-pole double-throw (SPDT) analog switch, suitable for use as an analog or digital multiplexer/demultiplexer. It is a low-voltage Si-gate CMOS device and is pin and function compatible with the 74HC4053 and 74HCT4053. Each switch has a digital select input (S_n), two independent inputs/outputs (nY_0 and nY_1) and a common input/output (nZ). All three switches share an enable input (\bar{E}). A HIGH on \bar{E} causes all switches into the high-impedance OFF-state, independent of S_n .

V_{CC} and GND are the supply voltage connections for the digital control inputs (S_n and \bar{E}). The V_{CC} to GND range is 1 V to 6 V. The analog inputs/outputs (nY_0 , nY_1 and nZ) can swing between V_{CC} as a positive limit and V_{EE} as a negative limit. $V_{CC} - V_{EE}$ may not exceed 6 V. For operation as a digital multiplexer/demultiplexer, V_{EE} is connected to GND (typically ground). V_{EE} and V_{SS} are the supply voltage connections for the switches.

		DIP16 package	-	750	mW
		SO16 package	-	500	mW
		TSSOP16 package	-	500	mW
		DHVQFN16 package	-	500	mW

[1] To avoid drawing V_{CC} current out of terminal nZ, when switch current flows into terminals nYn, the voltage drop across the bidirectional switch must not exceed 0.4 V. If the switch current flows into terminal nZ, no V_{CC} current will flow out of terminals nYn, and in this case there is no limit for the voltage drop across the switch, but the voltages at nYn and nZ may not exceed V_{CC} or V_{EE} .

[2] The minimum input voltage rating may be exceeded if the input current rating is observed.

[3] For DIP16 packages: above 70 °C the value of P_{tot} derates linearly with 12 mW/K.
 For SO16 packages: above 70 °C the value of P_{tot} derates linearly with 8 mW/K.
 For SSOP16 and TSSOP16 packages: above 60 °C the value of P_{tot} derates linearly with 5.5 mW/K.
 For DHVQFN16 packages: above 60 °C the value of P_{tot} derates linearly with 4.5 mW/K.
